The motion of an atom in an intense resonant standing laser wave is studied using the Ehrenfest-Bloch equations. Two approaches are taken to determine the radiation or light pressure force on the atom. The first, an attempt to find a Fourier series solution to the optical Bloch equations failed, but Fourier coefficient recursion formulas were found. The second, a numerical calculation of the Bloch variables and the radiation force was successful in obtaining plots of the instantaneous values. The effect of assuming constant atomic velocity is studied, and Fast Fourier Transform discrete harmonic-frequency spectra of one of the Bloch variables and the light pressure force are obtained. Finally, the Ehrenfest-Bloch equations are compared with other theories of resonant radiation pressure.

32928 (AD-A—164237/0/XAB) Relativistic gaussian basis set calculations on one-electron ions with a nucleus of finite extent. Binning, R.C. (Puerto Rico Univ., Rio Piedras). 1 Nov 1985. 5p. NTIS, PC A02/MF A01.

The disadvantages of using Gaussian functions (GTOs) in SCF electronic structure calculations are well known. The difficulties associated with Gaussians are likely to be more severe in relativistic Dirac-Fock calculations. Relativistic effects are important for core electrons, whereas GTOs give a poor description near the nucleus. By changing the boundary condition on the wavefunction at the origin, it may be possible to remove some of the difficulty. In calculations on O^{7+} and Hg^{79+}, explorer the effect of replacing the point model of the atomic nucleus by a nucleus of finite size is explored. It was found that smaller basis expansions are required for the heavier nucleus in the finite-nucleus model.

32929 (CENBG—8510) Large-angle scattering and nuclear-resonance effect in electron capture in H^+ /VC and N^+ +N collisions. Scheurer, J.N.; Baker, O.K.; Spooner, D.; Meyerhof, W.E. (Bordeaux-1 Univ., 33 - Gradignan (France). Centre d'Etudes Nucleaires). 1985. 1p. (CONF-850191—1-Summ.). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751803.

From 6. workshop on energetic atomic collisions; Oberstdorf, F.R. Germany (28 Jan 1985).

Published in summary form only.

32930 (CONF-860144—Summs.) Proceedings of the workshop on atomic physics with stored cooled heavy ion beams. (Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC05-84OR21400. 441p. NTIS, PC A19/MF A01; 1; GPO Dep. File Number DE86010009.

From Workshop on atomic physics with stored cooled heavy ion beams; Oak Ridge, TN, USA (13 Jan 1986).

The workshop program included (1) atomic physics with stored cooled heavy ion beams, (2) ion-atom collisions and (3) electron-multicharged ion interactions. 22 papers were cataloged separately. (WRF)

32931 (DOE/ER/10676—8) Semiempirical studies of atomic structure. Progress report, 2 January 1985-1 April 1986. Curtis, L.J. (Toledo Univ., OH (USA). Dept. of Physics and Astronomy). 1986. Contract AS05-80ER10676. 4p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010295.

Brief descriptions are given for projects in the following areas: (1) screening parametric studies of alkaline earthlike ions, (2) Spectra and lifetimes of hyperalkalis and hyperalkaline earths, (3) electron self-energy corrections in highly ionized heavy atoms, and (4) measurements of lifetime and spectra of doubly excited quartet states in three electron systems. (WRF)

32932 (DOE/ER/12032—05) Photon scattering and interaction analysis of interfacial corrosion and catalysis. Technical progress report, 1 February 1982-30 January 1986. Furtak, T.E. (Rensselaer Polytechnic Inst., Troy, NY (USA)). 1986. Contract AC02-82ER12032. 10p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010579.

An overview of the research program for optical phenomena at interfaces, in thin films and in microstructures is given. Included in the discussion are surface enhanced Raman scattering (SERS) and second harmonic generation. 35 refs. (WRF)

32933 (DOE/ER/13116—8) Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986. Bernstein, E.M.; Tanis, J.A. (Western Michigan Univ., Kalamazoo (USA)). Apr 1986. Contract AC02-83ER13116. 22p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010390.

X-ray emission associated with projectile charge-changing events in ion-atom collisions has been used to isolate and investigate excitation, ionization, and charge transfer, as well as combinations of these processes. New measurements were made of K-shell and L-shell resonant transfer and excitation (RTE) for 210 to 300 MeV $_{20}$Ca/sup 10,11+/ + H_2 collisions and 230 to 610 MeV $_{41}Nb^{31+}$ +

H_2 collisions, respectively. Nonresonant transfer and excitation (NTE) was studied for 40 to 160 MeV S^{13+} + Ne. Single-electron capture and loss measurements, requiring accel-decel techniques, were made for 2.5 to 200 MeV S^{13+} on He. In the case of Ca/sup 16,17,18,19+/ + H_2 collisions the single capture cross cross sections exhibit a nonmonotonic energy dependence which we attribute to RTE. Double-electron capture in single collisions was investigated for S^{13+} + He and Ne and Ar^{18+} + Ne and the cross sections were found to be 10 to 100 times smaller than the single-capture cross sections. Measured two-electron loss cross sections for Ca/sup q^+/ ions incident on H_2 vary with charge state and depend strongly on whether L- or K-shell electrons are removed. Measurements of simultaneous projectile excitation and electron loss for several collision systems indicate that K-vacancy production occurs primarily through excitation rather than loss of the 1s electron. 13 refs.

32934 (FRNC-TH—2102) Monokinetic electron backscattering from amorphous or polycrystalline specimens. Ahmed, H.E.D.H. (Toulouse-3 Univ., 31 (France)). Jun 1983. 155p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE86751785.

We have considered the interaction of electrons with thin amorphous specimens: one part of these electrons is transmitted through the substance, the other being backscattered. This last phenomena, which is not perfectly understood, has been studied in the energy range from 0.3 to 3 MeV. First this work deals with the realization of a fully automatic apparatus which has been adapted to the column of the 3 MeV electron microscope of the HVFM laboratory in Toulouse. The variation of the transmission and backscattering coefficients, for amorphous and polycrystalline specimens, is determined. From this coefficient the electron range in this substance can be deduced. In addition the experimental results can be used to understand the image contrast in scanning electron microscopy. A short presentation of the cross-section, introduces the theoretical study of Monte-Carlo calculation. The Monte-Carlo calculation is used to take into account all elementary processus, which take place during electron scattering.

32935 (FRNC-TH—2117) Study of a high and low pressure plasma produced in a He-N_2 mixture: application to spontaneous emissions by radiative collisions. Marcum, S.D. (Paris-11 Univ., 91 - Orsay (France)). 1983. 160p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE86751791.

This thesis is centered on the study of the energy transfer from helium metastable atoms to ground state nitrogen molecules by the process of radiative collisions. Experimental techniques employed include the analysis of spontaneous emission from the reaction: $He(2^3S)+N_2(X,v=0) \rightarrow He(1^1S)+(N_2sup(R)(B,v'=4,5) \rightarrow N_2sup(R)(X,v'')+h\omega)$, where R indicates highly excited nitrogen Rydberg states. As the lower level Rydberg states are autoionizing, the net effect of the radiative collision is identical that of Penning ionization where the Rydberg to states are intermediates. The results of this study lend support to the validity of a radiative collision based laser amplifier model proposed in the thesis.

32936 (FRNC-TH—2119) Energy balance for secondary plasma electrons produced by a high power electron beam propagating in gas mixture: theoretical and experimental study. Richard, A. (Grenoble-1 Univ., 38 - La Tronche (France)). 1983. 145p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751787.

Propagation in gaseous atmosphere of high power beam of relativistic electrons has important application: inertial fusion, energy transport. This thesis studies theoretically and experimentally the secondary electron gas, the crossed atmosphere being nitrogen. First, in the presence of chemical and inelastic processes, the electron transport equation is written. The multiple processes are inventoried and missing cross-sections are calculated. Ionization and excitation of nitrogen molecule are studied more in detail. Source terms for transport equations are derived. An experiment, made at CEN of Valduc with EUPHROSYNE generator, and where relativistic electron beam (1.7 MV, 40 kA) is propagating in nitrogen atmosphere at different pressures, is described. From measurements, plasma parameters are found: density, temperature, often integrated on beam radius and on pulse duration.

32937 (FRNC-TH—2121) Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities. Gladieux, A. (Paris-11 Univ., 91 - Orsay (France)). Mar 1983. 137p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751784.

This thesis is related to the experimental study of convoy electrons emerging with light ions (H^+, H_3^+, He^+ and He^{++}) from 15 $\mu g/cm^2$ aluminium targets. Ion velocities pertain to the range $4v_0$ - $8v_0$. The velocity distributions of electrons obtained with protons have two components centered on the velocity of emerging ions. The large component has properties compatible with charge exchange to the continuum theories. The narrow component behaves very differently and might be indicative of an effect taking into account the polarization wake trailing the ions inside the solide. Results obtained with H_2^+, He^+ and He^{++} ions are also presented.

32938 (IAE—3855/6) Excitation and dissociation of molecular ions by electron impact. Decay of molecular Rydberg state. Lebedev, V.S.; Marchenko, V.S. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701928.

Processes of excitation, dissociation and dissociative recombination of molecular ions in high vibrational states in collisions with electrons are considered. The most important, in this case, transition mechanism related to the interaction of external electron and dipole moment of molecular ion is taken account of. Inner electrons of molecular ion don't participate in the transitions considered. It is shown that for weak coupled external electron such mechanism of electron energy exchange and nuclei movement results in the appearance of the effective process of autodissociation decay of the Rydberg states of a vibration-excited molecule.

32939 (IAE—3936/6) Quadrupolar transitions induced proton impacts for multicharged ions with small excitation energy. Bazylev, V.A.; Kereselidze, T.M.; Chibisov, M.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701929.

3Dsub(3/2) reversible 3Dsub(5/2) transition cross-sections of Mosup(23+) potassium-like ion induced with proton impacts were calculated. Perturbation theory related to the interaction of a coupled electron and impinging proton was used for the calculations. The proton is considered moving in a classical path in the Coulomb repulsion field. The transition is due to the electric quadrupole interaction. Maximum cross-section is of order of 10^{-17} cm^2. An appoximating expression is obtained for the process rate constant ($v\sigma$). The calculations show that the excitation rate of the abovementioned transitions with protons in hot plasma is somewhat higher than with electrons.

32940 (JINR—R-4-84-693) Relativistic effects in the weakly bound states of ddμ and dtμ mesic molecules. Bakalov, D.D.; Vinitskij, S.I.; Melezhik, V.S.; Men'shikov, L.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701927.

Submitted to the journal Phys. Lett. .

The relativistic shift and the fine and hyperfine splitting of the energy levels of the weakly bound states of ddμ and dtμ mesic molecules have been calculated. These results should be taken into account in the description of the resonance type formation of ddμ and dtμ.

32941 (JINR—R-14-84-273) Yield cross section of proton induced L-shell characteristic X rays. Brazevich, Ya.; Brazevich, Eh.; Osetinskij, G.M.; Pajek, M.; Ploskonka, I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics; Wyzsza Szkola Pedagogiczna, Kielce (Poland)). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701930.

Submitted to the journal J. Phys., B.

Thin targets of Sb, Te, Ho, Ta, W, Pt and Bi elements have been employed and L X-ray yields have been measured as a function of proton energy from 1.5 to 3.8 MeV. From these measurements the individual and total X-ray yield cross sections have been calculated and compared with the experimental results reported by other authors and with calculations based on plane-wave Born approximations with correction for Coulomb-deflection, relativistic and energy-loss effects resulting in the ECPSSR theory of Brandt and Lapicki.

32942 (JINR—R-14-84-571) ^{4}He induced L-shell X ray production cross sections and their ratios. Brazevich, Ya.; Brazevich, Eh.; Osetinskij, G.M.; Pajek, M.; Ploskonka, I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701931.

Submitted to the journal J. Phys., B.

Using Ag, Sn, Sb, Te, Ho, Ta, W, Pt and Bi thin targets, energy dependences of X-ray production cross sections for Lsub(α)-, Lsub(β)-, Lsub(γ)-, Lsub(l)-transitions and for the whole L-shell during excitation with ^{4}He ions in the energy range 1.5-3.8 MeV have been measured. The results obtained are compared with the calculations made according to the ECPSSR theory, which describes Coulomb ionization in the PWBA approximation taking into account corrections for the change in binding energy, shell polarization and relativistic effect for electrons of target atoms. Effect of deviation in Coulomb field and energy loss in incident ion during its collision with target atom is considered.

32943 (LA-UR—86-634) Measurements of laser generated impulse. King, T.; Barrus, D.; Dingus, R.; Osborne, Z.; Phipps, C. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 8p. (CONF-860616—10). NTIS, PC A02/MF A01; GPO Dep. File Number DE86007378.

From International symposium on intense dynamic loading and its effects; Beijing, China (3 Jun 1986).

The total impulse delivered by pulsed-laser illumination of planar targets in vacuum. Data are presented for several target materials (aluminum and some of its alloys, titanium, and kevlar/epoxy structural composite) as a function of incident fluence for laser wavelengths of 248 nm, 2.8 μm, and 10.6 μm. 4 tabs.

32944 (LP—202) Study of a microwave discharge in argon/helium mixtures. Saada, S.; Bloyet, E.; Dervisevic, C.; Laporte, C. (Paris-11 Univ., 91 - Orsay (France). Lab. de Physique des Plasmas). Nov 1983. 100p. (In French). NTIS (US Sales Only), PC A05/MF A01. File Number DE86751786.

A discharge created by a surface wave in argon-helium mixture is studied. First, the helium influence on plasma parameters has been studied (electron density, electric field, effective collision frequency, etc...), then, on excitation processes in the discharge. Relations between plasma lines, electron density and electric field have been established.

32945 3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence. Feldman, U.; Seely, J.F.; Doschek, G.A.; Bhatia, A.K. (E. O. Hulburt Center for Space Research, Naval Research Laboratory, Washington, DC 20375—5000). *Journal of Applied Physics;* **59**: No. 12, 3953-3957(15 Jun 1986).

The populations of the 46 levels belonging to the configurations $2s^22p^2$, $2s2p^3$, $2p^4$, $2s^22p3s$, $2s^22p3p$, and $2s^22p3d$ have been calculated for ions in the C I isoelectronic sequence with atomic numbers Z = 18, 22, 26, 30, 34, and 36 and for electron densities from 10^{15} to 10^{22} cm^{-3}. The populations of the $2s^22p3p$ levels are relatively large owing to the large electron collisional monopole excitation rates from the ground configuration and to the small radiative decay rates to the ground configuration. This results in population inversions for transitions of the type 3s—3p. The gain coefficients for these transitions are determined and are compared to previous calculations. At high electron densities where collisional mixing of the excited levels becomes important, the intensities of the x-ray transitions from the $2s^22p3p$ levels to the $2s2p^3$ levels decrease relative to the x-ray transitions from the $2s^22p3s$ and $2s^22p3d$ levels. The density dependence of these x-ray line ratios is also presented. These line ratios represent a promising diagnostic for electron density.

32946 UV laser excited fluorescence spectroscopy of the jet-cooled copper dimer. Rohlfing, E.A.; Valentini, J.J. (Chemistry Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **84**: No. 12, 6560-6566(15 Jun 1986).

UV laser excited fluorescence spectra of the jet-cooled copper dimer are reported. Cu_2 is produced via laser vaporization of the metal inside the throat of a pulsed, supersonic nozzle. Strong fluorescence is observed upon excitation of $^{63}Cu_2$ in the range 287—324 nm, corresponding to several v" = 0 bands of the II—X transition recently found in excitation using resonant two-photon ionization [Smalley et al., J. Chem. Phys. 78, 2866 (1983)]. The II—X emission spectra are characterized by extremely long progressions in the ground state vibration, enabling us to measure G(v) and ΔG/sub v/+1/2 values over the range v = 0—72. This data has been fit to yield improved vibrational constants for $^{63}Cu_2$ X $^1\Sigma^+$/sub g/: ω/sub e/ = 266.43 +- 0.59 cm^{-1}, ω/sub e/x/sub e/ = 1.035 +- 0.030 cm^{-1}, ω/sub e/y/sub e/ = +(1.70 +- 0.58) x 10^{-3} cm^{-1}, and ω/sub e/z/sub e/ = -(1.78 +- 0.37) x 10^{-5} cm^{-1}. The G(v) data has also been fit to a near-dissociation expansion which incorporates the correct limiting behavior of G(v), determined by the asymptotic inverse power contribution to the potential. This fit gives an improved dissociation energy for the dimer, and the vibrational index at dissociation: D/sub e/ = 16 760 +- 200 cm^{-1} and v/sub D/ = 128 +- 5.

32947 Theory of initial yields of ions generated by electrons in binary mixtures. Eggarter, E. (Argonne National Laboratory, Argonne, Illinois 60439). *Journal of Chemical Physics;* **84**: No. 11, 6123-6128(1 Jun 1986). Contract W-31-109-ENG-38.

Interactions of charged particles with matter concerns most often mixtures or chemically impure substances. This paper presents the first rigorous treatment of the ionization yields in a binary mixture of gases A and B in the absence of energy transfer between molecules. The Fowler equation was used, and as a first example the system Ar—H_2 was studied. Results for the number of all ions N and for the number of ions of types A or B are presented for incident electron energies T up to 2000 eV. The calculations cover the complete range of the mixture composition. Comparison with available experimental data shows excellent agreement. The mean numbers of Ar and H_2 ions present a very interesting dependence on the concentration of the species; their ratio is approximately proportional to the ratio of their partial concentrations.

32948 Metal vapor vacuum arc ion source. Brown, I.G.; Galvin, J.E.; Gavin, B.F.; MacGill, R.A. (University of California, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Review of Scientific Instruments;* **57**: No. 6, 1069-1084(Jun 1986). Contract AC03-76SF00098.

A high-current ion source is described in which a metal vapor vacuum arc is used to create the plasma from which the ion beam is extracted. An ion beam current of up to about 1 A has been measured at an extraction voltage of 25 kV for a range of metallic species spanning the periodic table from lithium to uranium. Multiply ionized charge states are seen up to as high as Q = 6+ in the case of uranium. In the metal vapor vacuum arc, regions of intense current concentration are formed at the cathode, and it is at these regions, the cathode spots, that the cathode material is vaporized and ionized to form a dense, quasi-neutral plasma which plumes away from the cathode surface. The plasma plume is caused to impinge upon a set of extractor grids, and the ion beam is extracted from the streaming metal plasma. A preliminary survey of the performance of the source has been made. We describe here the

principle of operation of the source, the source design, and the results of those measurements that we have made to date.

32949 **Electron—gas plus damped-dispersion calculation of the N_2—N_2 interaction.** LeSar, R.; Shaw, M.S. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Chemical Physics;* **84**: No. 10, 5479-5485(15 May 1986).

We present the results of a calculation of the N_2—N_2 intermolecular potential using the modified Gordon—Kim (electron—gas) model with damped-dispersion terms (MGKD potential). The calculated potential agrees well in the well region with other proposed potentials. An analytical form that fits the potential with an average error of 0.2% from the well region to 30 kK on the repulsive wall is given. Solid-state properties, such as the 0 K phase diagram and the pressure—volume curve, are calculated and are in good agreement with experiment. As a test of the repulsive region, the shock Hugoniot calculated with this potential is compared with experiment and also shows good agreement.

32950 **Coupled-channel study of rotational excitation of an electronically excited diatomic molecule by atom impact: He(^{1}S)+H_2 (B $^1\Sigma^+$/sub u/).** Grimes, R.M.; Lester W.A. Jr.; Dupuis, M. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **84**: No. 10, 5437-5443(15 May 1986). Contract AC03-76SF00098.

Rotational energy transfer cross sections have been computed in the rigid rotor model, for the energy range 0.015—0.150 eV, using an analytic fit to ab initio interaction energies determined by others and the authors with large basis set CI approaches. Long-range interactions are described by a multipole expansion. The potential energy surface is highly anisotropic and leads to integral inelastic cross sections, typically larger than those involving ground state systems, in fair agreement with results obtained using a previously determined fit.

32951 **Reactive scattering of Na(3 ^{2}P$_3$/sub //$_2$)+HCl.** Vernon, M.F.; Schmidt, H.; Weiss, P.S.; Covinsky, M.H.; Lee, Y.T. (Materials and Molecular Research Division, Lawrence Berkeley Laboratory and Department of Chemistry, University of California, Berkeley, California 94720). *Journal of Chemical Physics;* **84**: No. 10, 5580-5588(15 May 1986).

The reaction of electronically excited Na(3P) atoms with HCl has been studied in a crossed molecular beams experiment. At collision energies slightly above the endoergicity of the reaction, Na(3P) shows a dramatic enhancement of reactivity over ground state Na(3S). Detailed measurements of the laboratory angular and velocity distributions of the reactively scattered NaCl product at 5.4 kcal/mol collision energy have allowed determination of the product center-of-mass translational and angular distributions. These experimental results are compared to the DIPR model of electron transfer reactions. The broad translational energy distribution is in qualitative agreement with the DIPR model, but the angular distribution exhibits reduced intensity for scattering perpendicular to the relative velocity vector which cannot be reproduced by the DIPR model. The preferred transition state configuration, Na—Cl—H, is consistent with what would be predicted by a diffuse 3P orbital where the Na atom appears ion-like. This configuration is opposite to that given by the dominant term in the long range multipolar expansion of the neutral reactant potential.

32952 **Vacuum ultraviolet oscillator strengths of Hg measured by sum-frequency mixing.** Smith, A.V.; Alford, W.J. (Sandia National Laboratories, Albuquerque, New Mexico 87185). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 3172-3180(May 1986). Contract AC04-76DP00789.

We have measured oscillator strengths for the transitions 6 ^{1}S to (5d^{10}6s np) n /sup 1,3/P$_1$ for n = 6 to 13 and to (5d^{9}6s^{2}6p) 6p' ^{1}P for atomic Hg. Two new techniques for measuring dispersion based on nonlinear-optical sum-frequency mixing are used to achieve 10% accuracy for the stronger transitions. One method uses crossed beams in a Hg heat-pipe cell to map dispersion curves in regions of anomalous dispersion. The second method uses input beams of three separate frequencies and maps regions of normal and anomalous dispersion by tuning one of the input frequencies to the red and blue of the 6 ^{3}P$_1$ level. Because the dispersion of the refractive index near a resonance is determined over a large wavelength range, the oscillator strength of that resonance is determined independent of the strengths of other transitions.

32953 **Time-resolved optical-pumping study of hydrogen discharges.** Knize, R.J.; Cecchi, J.L. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 3595-3597(May 1986). Contract AC02-76CH03073.

A new technique is described which utilizes optical pumping in a time-resolved mode to study atomic hydrogen produced by a discharge. Initial measurements provide information about the equilibrium atomic-hydrogen density, its temporal evolution, and the diffusion coefficient for hydrogen atoms in molecular hydrogen.

32954 **Ac Stark splitting in multiphoton excitation of atomic hydrogen in flames: Abnormal peak asymmetry due to pressure broadening.** Lau, A.M.F. (Sandia National Laboratories, Livermore, California 94550). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 3602-3605(May 1986).

A theory of ac Stark (or Autler-Townes) splitting occurring in double optical resonances, one of which is a two-photon transition is developed. Both laser bandwidth and collisional broadening effects are included. Theoretical results are in excellent agreement with Goldsmith's observation of two-peaked structures in the multiphoton excitation spectra of atomic hydrogen in atmospheric-pressure flames. This is believed to be the first study demonstrating that the peak asymmetry in an ac Stark doublet can be reversed due to pressure broadening.

32955 **Distorted-wave methods for electron capture in ion-atom collisions.** Burgdoerfer, J.; Taulbjerg, K. (University of Tennessee, Knoxville, Tennessee 37996; Joint Institute for Heavy Ion Research, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 2959-2969(May 1986). Contract AC05-84OR21400.

Distorted-wave methods for electron capture are discussed with emphasis on the surface term in the T matrix and on the properties of the associated integral equations. The surface term is generally nonvanishing if the distorted waves are sufficiently accurate to include parts of the considered physical process. Two examples are considered in detail. If distorted waves of the strong-potential Born-approximation (SPB) type are employed the surface term supplies the first-Born-approximation part of the T matrix. The surface term is shown to vanish in the continuum-distorted-wave (CDW) method. The integral kernel is in either case free of the dangerous disconnected terms discussed by Greider and Dodd but the CDW theory is peculiar in the sense that its first-order approximation (CDW1) excludes a specific on-shell portion of the double-scattering term that is closely connected with the classical Thomas process. The latter is described by the second-order term in the CDW series. The distorted-wave Born approximation with SPB waves is shown to be free of divergences. In the limit of asymmetric collisions the DWB suggests a modification of the SPB approximation to avoid the divergence problem recently identified by Dewangan and Eichler.

32956 **Collision kernel and interatomic potential.** Ho, T.; Chu, S. (Department of Chemistry, University of Kansas, Lawrence, Kansas 66045). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 3067-3073(May 1986).

We present a detailed study of the influence of the form and strength of the interatomic potential on the one-dimensional elastic collision kernel W(v/sub z//sup prime/,v/sub z/), a quantity of interest in the study of the effects of velocity-changing collisions on laser spectroscopic line shapes. We find that the absolute magnitudes of collision kernels are very sensitive while normalized collision kernels are moderately sensitive to the potential form used. This indicates the importance of employing realistic interatomic potentials and reliable differential cross sections in the accurate deter-

mination of collision kernels. For the case of the Lennard-Jones (12,6) potential, we found a universal semiclassical Lennard-Jones (SCLJ) analytical model function, which is the combination of a semiclassical expression for small to medium scattering angles and a classical expression for large scattering angles, capable of providing correct average quantum-mechanical behaviors of differential cross sections for all scattering angles. This greatly facilitates the (often time-consuming) numerical evaluation of the collision kernel integrals and exhibits the correct collision kernel line profiles.

32957 **Distorted-wave calculations of dielectronic recombination as a function of electric field strength.** Griffin, D.C.; Pindzola, M.S.; Bottcher, C. (Physics Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] A: General Physics;* **33**: No. 5, 3124-3132(May 1986). Contract AC05-84OR21400.

The effects of external electric fields on dielectronic recombination have been studied in the distorted-wave approximation. The eigenvectors for the doubly excited Rydberg states were determined by diagonalizing a Hamiltonian matrix which includes the internal electrostatic and spin-orbit terms, as well as the Stark matrix elements. Calculations were performed for the dielectronic recombination transitions associated with the 2s→2p excitation in the Li-like ions B^{2+}, C^{3+}, and O^{5+}; and the 3s→3p excitation in the Na-like ions P^{4+}, S^{5+}, and Cl^{6+}. The results for the Na-like ions are compared with recent merged-beam measurements, and the differences between the two sequences with respect to the enhancement of dielectronic recombination as a function of electric field strength are discussed.

32958 **Relativistic two-photon emission: Lifetime of the 2 $^1S_0$ state of helium-like Kr^{34+}.** Marrus, R.; Vicente, V.S.; Charles, P.; Briand, J.P.; Bosch, F.; Liesen, D.; Varga, I. (Department of Physics and Lawrence Berkeley Laboratory, University of California, Berkeley, California 94720). *Physical Review Letters;* **56**: No. 16, 1683-1686(21 Apr 1986). Contract AC03-76SF00098.

The two-photon (2E1) decay 2 $^1S_0$-1 $^1S_0$ in the heliumlike ion Kr^{34+} has been observed and the lifetime measured. Departures are measured for the first time from the predictions of the nonrelativistic theory, and are sensitive to relativistic effects on the transition-matrix elements. The measured lifetime is tau(measured) = 34.08(0.34) x 10^{-12} s compared to tau(nonrelativistic) = 31.94(0.01) x 10^{-12} s.

32959 **Dielectronic satellite spectra for He-like ions.** Hsiung Chen, M. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Atomic Data and Nuclear Data Tables;* **34**: No. 2, 301-356(Mar 1986).

The wavelengths, radiative transition probabilities, and Auger rates have been calculated relativistically for transitions $1s2l2l'$-$1s^22l''$, $1s2l3l'$-$1s^23l''$, $1s2l2l'$-$1s^2\epsilon l''$, and $1s2l3l'$-$1s^2\epsilon l$ using the multi-configuration Dirac-Fock model. Ions with atomic number $6 < \text{or} = Z < \text{or} = 42$ have been considered. Generalized Breit interaction and quantum electrodynamic corrections are taken into account in the calculations of transition energies. Transition rates are computed in intermediate coupling with configuration interaction. The generalized Breit interaction is included in the evaluation of both mixing coefficients and relativistic Auger matrix elements. The dielectronic satellite intensity factors and line fluorescence yields are also calculated.

32960 **Method for precisely computing molecular integrals over STOs with n=l.** Suzuki, N. *Denki Tsushin Daigaku Gakuho;* **36**: No. 1, vp(Sep 1985).

Calculations of the relativistic effects in molecules by the use of the Dirac equation requires the evaluation of molecular integrals over atomic orbitals (AOs) with principal and azimuthal quantum numbers, n and l, of the same value. However, a method of precisely computing such molecular integrals has not yet been established. A method is given for precise evaluation of such diatomic molecular integrals by the use of Slater type orbitals (STOs) as AOs. Most types of those integrals can readily be evaluated by introducing an auxiliary integration function, -Ei(-alpha) where alpha is positive, into the established formulations able to calculate the diatomic molecular integrals over STOs with n=l. In evaluation of two electron two center Coulomb repulsion integrals, however, the division of the integration region into several parts is necessary because the charge density expressed by product of two n=l STOs centered at the same nucleus, varies very sharply near the nucleus.

32961 **Laser optical pumping in nuclear physics: fission isomers, oriented targets, and hyperfine pumping in single-electron atoms.** Bemis, C.E. Jr. (Oak Ridge National Lab., TN, USA). *Hyperfine Interactions;* **24**: No. 1-4, 139-142(Aug 1985). (CONF-840152—).

From International workshop on hyperfine interactions; Kanpur, India (16 Jan 1984).

Published in summary form only.

32962 **Relativistic calculation of atomic transition probabilities.** Chen, M.H. (Lawrence Livermore Lab., Livermore, CA). pp 31-96 of Atomic inner-shell physics. Crasemann, B. New York, NY; Plenum Press (1985).

This chapter reviews the theoretical calculations of atomic inner-shell transition probabilities from independent-particle models. Also explored are some factors affecting the inner-shell transition rates, with special emphasis on the effects of relativity. The effects of relativity on atomic transition probabilities can arise from several different factors such as change in energies; relativistic orbital effects caused by the inclusion of the mass-velocity correction, the Darwin term, and spin-orbit interaction in the Dirac Hamiltonian and the indirect relativistic effect, and the relativistic aspects of the pertinent operators. The net effect depends on the relative strengths and phases of these factors. The effects of relativity on the transition rates of atoms with a single inner-shell vacancy can be seen more vividly in heavy elements. General conclusions are offered concerning the effects of relativity on radiative transitions as well as radiationless transitions.

32963 **Rayleigh scattering: elastic photon scattering by bound electrons.** Kissel, L.; Pratt, R.H. (Sandia National Labs., Albuquerque, NM). pp 465-532 of Atomic inner-shell physics. Crasemann, B. New York, NY; Plenum Press (1985).

This chapter discusses "Rayleigh scattering" or the elastic scattering of photons from atomic electrons, leaving the target atom unchanged after scattering. Depending on the choice of energy and scattering angle, the process can be used as a sensitive probe of either inner-shell or outer-shell structure. The cross sections for the main elastic and inelastic photon-atom process, as a function of photon energy, are illustrated. Rayleigh scattering has commonly been estimated in a simple form-factor approximation that is described in this chapter. The physical features of elastic scattering and experimental methods for the measurement of elastic scattering in circumstances for which the dominant contribution comes from inner-shell atomic electrons are also covered. A comparison of theory and experiment is presented and Rayleigh scattering applications are described.

32964 **Dissociation of molecules by slow electrons.** Compton, R.N.; Bardsley, J.N. (Oak Ridge National Laboratory, Oak Ridge, TN). pp 275-349 of Electron-molecule collisions. Shimamura, I.; Takayanagi, K. New York, NY; Plenum Press (1984).

At a first glance it might appear unlikely that the nuclei within a molecule can be separated in a collision with such a light particle as an electron. However, according to the Born-Oppenheimer principle, the effective potential controlling the motion of the nuclei is given by the eigenvalues of the electronic Hamiltonian. Thus, a change in the electronic structure of the molecule can have a profound effect on the nuclear motion, and an electronic transition will often be accompanied by vibrational excitation or dissociation of the molecule. It is useful to divide the various dissociative processes into three groups that we will call dissociative excitation, dissociative ionization, and dissociative capture. Each of these three processes can be viewed, following the Born-Oppenheimer ideas, in terms of an electronic transition in which the nuclei do not move, followed by dissociation of the nuclei along a modified potential. In dissociative excitation the initial step involves the electronic excitation of the target molecule, either through direct or exchange scat-

tering. Dissociation will be a likely outcome if the excited state has a potential curve with a minimum at a relatively large value of R. With respect to electron-impact ionization, the removal of one of the target electrons from a stable molecule almost always leads to a more weakly bound electronic state. This is especially true if the ejection of the electron leaves the molecular ion in an excited state. For example, the excited electronic states of H^+_2 have potential curves that are either completely repulsive or have very weak attractive regions at extremely large R. Hence ionization of a molecule often leads to dissociation.

32965 **Angular spectrum of the 88% efficient Raman generator.** Carlsten, J.L.; Ball, D.P. (Physics Dept., Montana State Univ., Bozeman, MT 59717). pp 255-256 of Lasers '84. McLean, VA; STS Press (1984). (CONF-8411153—).

From International conference on lasers '84; San Francisco, CA, USA (26 Nov 1984).

Measurements of the angular spectrum of the first Stokes beam from a Raman generator confirm the predictions of a recent model of Bobbs and Warner which explains the unexpected hold off in second Stokes generation.

32967 **(AD-A—164298/2/XAB) Operational characteristics of a high voltage dense plasma focus. Final report, 7 May 1982-19 April 1985.** Woodall, D.M. (New Mexico Univ., Albuquerque (USA). Dept. of Chemical and Nuclear Engineering). Nov 1985. 160p. NTIS, PC A08/MF A01.

A high-voltage dense plasma focus powered by a single-stage Marx bank was designed, built and operated. The maximum bank parameters are: voltage--120 kV, energy--20 kJ, short-circuit current--600kA. The bank impedance is about 200 millohms. The plasma focus center electrode diameter is 1.27 cm. The outer electrode diameter is 10.16 cm. Rundown length is about 10 cm, corresponding to a bank quarter period of about 900 millohms ns. Rundown L is about 50 milliohms. The context of this work is established with a review of previous plasma focus theoretical, experimental, and computational work and related topics. Theoretical motivation for high-voltage operation is presented. The design, construction, and operation of this device are discussed in detail. Results and analysis of measurements obtained are presented. Device operation was investigated primarily at 80 kV (9 kJ), with a gas fill of about 1 torr H2, plus 3-5 percent A. The following diagnostics were used: gun voltage and current measurements; filtered, time-resolved x-ray PIN measurements of the pinch region; time-integrated x-ray pinhole photographs of the pinch region; fast-frame visible light phototgraphs of the sheath during rundown; and B probe measurements of the current sheath shortly before collapse.

32968 **(AD-A—164345/1/XAB) Investigation of the plasma properties of surface discharges. Final report, 1 October 1984-30 September 1985.** Beverly, R.E. (Beverly (R.E. III) and Associates, Columbus, OH (USA)). 30 Sep 1985. 63p. NTIS, PC A04/MF A01.

Large-area (60-220 sq cm), short-pulse (approx. 1 microsec) planar discharges employing profiled electrodes have been produced across various polymer substrates. Parametric studies of the electrical-circuit parameters and discharge dimensions demonstrate the importance of proper source driver impedance matching to short-pulse operation. The degree of spatial homogeneity depends upon the peak discharge voltage, the initial rate of voltage rise, the specific capacitance of the substrate, the gas atmosphere and pressure, and the ablation mode of the substrate. Spectroscopic studies were performed to measure the equivalent brightness temperature, electron temperature, electron density, and optical thickness of smaller-area (24 sq cm) surface discharges across perovskite ceramic substrates. Detailed measurements were conducted with the spectrometer slit image perpendicular and parallel to the substrate surface, with the latter measurements being performed at incremental heights above the surface, with the latter measurements being performed at incremental heights above the surface. The plasma is not opaque in the soft-uv and shows considerable structue due to line emission from neutral and singly-ionized species originating from the gas atmosphere and vaporized substrate material. Keywords: Surface discharges; Incoherent optical sources; Electrical properties; Breakdown time; Electrical recovery; Gasdynamic behavior; Shock waves; Optical detonation; Radiative properties; and Spectroscopy.

32969 **(ORNL—6189) Remarks on the choice of a stiff ordinary differential equation solver for the solution of fluid flow problems.** Thompson, S. (Oak Ridge National Lab., TN (USA)). Mar 1986. Contract AC05-84OR21400. 39p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010080.

Several aspects of the solution of fluid flow problems are discussed. A model problem is described which captures several of the salient characteristics of such problems. The model problem is derived from the one-dimensional Euler equations. It corresponds to the subcooled liquid region of a three region reactor steam generator model. The defining partial differential equations are discretized spatially using the method of pseudo-characteristics. The resulting system of ordinary differential equations is then solved by the method of lines using each of several available ordinary differential equation (ode) solvers. In addition to demonstrating that fluid flow problems can be solved effectively using adaptive mathematical software, the results also illustrate the typical performance of each solver as well as the relative merits of special solver features (eg., automatic method switching and exploitation of problem sparsity or bandedness). The model problem is also modified and used to illustrate several commonly observed characteristics of fluid flow models. The results illustrate the potential effect of solver performance of characteristics such as inaccurate water property calculations. Consequently, they explain apparent anomalies often attributed incorrectly to poor solver design and algorithmic implementation. The results also support the choice of the sparse ordinary differential solver LSODES for the solution of fluid flow problems. 16 refs., 29 tabs.

32970 **(UCRL—92436) Discrete particle computer methods for modeling granular flow.** Walton, O.R. (Lawrence Livermore National Lab., CA (USA)). Jan 1986. Contract W-7405-ENG-48. 11p. (CONF-860625—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86005202.

From American Society of Civil Engineers meeting on advancements in aerodynamics, fluid mechanics and hydraulics; Minneapolis, MN, USA (3 Jun 1986).

Recent adaptations of molecular-dynamics-like techniques to systems of inelastic, frictional particles are being used to probe the details of granular flow behavior. A variety of calculational approaches are beng pursued including: rigid-particle, soft-particle, suspended particle and Monte Carlo flow simulations. Much such calculational efforts have investigated only relatively simple configurations to date, such as assemblies of equal-sized circular particles restricted to motion in a single plane. Periodic boundaries are often used to allow simulation of semi-infinite systems with a relatively small number of particles. A few models have been extended to three-dimensions with inelastic, frictional spheres. Where comparisons have been possible, agreement with experiments and with some theories have been good. In many circumstances the numerical simulations are providing heretofore unavailable information on the micromechanisms occurring in deforming granular materials. These details include stress networks in quasistatic deformations, residual internal stresses in unloaded assemblies, shear layers in high density rapid shearing flows and highly anisotropic deviatoric velocity distributions and large normal stress differences in rapid

shearing flows at low solids concentrations. Various approaches and their results are briefly reviewed.

32971 **Condition for pressure isotropy.** Newcomb, W.A. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550 and Department of Applied Science, University of California, Davis, California 95616). *Physics of Fluids;* **29**: No. 6, 1854-1859(Jun 1986). Contract W-7405-ENG-48.

For a collisionless, relativistic electron fluid, conditions on the velocity field are formulated which are necessary for the maintenance of pressure isotropy in the local fluid rest frame. A complete characterization of all velocity fields which satisfy these conditions is worked out in the nonrelativistic limit, and a few simple examples are given in the relativistic case.

32972 **Vapor condensation in the presence of a noncondensable gas.** Pong, L.; Moses, G.A. (Fusion Technology Institute, 1500 Johnson Drive, University of Wisconsin—Madison, Madison, Wisconsin 53706). *Physics of Fluids;* **29**: No. 6, 1796-1804(Jun 1986).

Kinetic theory principles are used to study one-dimensional steady-state vapor condensation phenomena in the presence of a noncondensable gas. The results have been fitted to an interpolation formula describing the condensation flux that reduces to the one obtained by Labuntsov and Kryukov [Int. J. Heat Mass Transfer 22, 989 (1979)] in the limit of no noncondensable gas.

32973 **Microscopic calculations of the excitation spectrum of one ^{3}He impurity in liquid ^{4}He.** Fabrocini, A.; Fantoni, S.; Rosati, S.; Polls, A. (Department of Physics and Material Research Laboratory, University of Illinois at Urbana-Champaign, Urbana, Illinois 61801). *Physical Review [Section] B: Condensed Matter;* **33**: No. 9, 6057-6067(1 May 1986). Contract AC02-76ER01198.

We calculate the chemical potential ϵ_0 and the effective mass $m(/m_3$ of one ^{3}He impurity in liquid ^{4}He. First a variational wave function including two- and three-particle dynamical correlations is adopted. Triplet correlations bring the computed values of ϵ_0 very close to the experimental results. The variational estimate of $m(/m_3$ includes also backflow correlations between the ^{3}He atom and the particles in the medium. Different approximations for the three-particle distribution function give almost the same values for $m(/m_3$. The variational approach underestimates $m(/m_3$ by $\sim$10% at all of the considered densities. Correlated-basis perturbation theory is then used to improve the wave function to include backflow around the particles of the medium. The perturbative series built up with one-phonon states only is summed up to infinite order and gives results very close to the variational ones. All the perturbative diagrams with two independent phonons have then been summed to compute $m(/m_3$. Their contribution depends to some extent on the form used for the three-particle distribution function. When the scaling approximation is adopted, a reasonable agreement with the experimental results is achieved.

32974 **Variational and diagrammatic evaluations of the ground-state energy of quantum liquids.** Krotscheck, E.; Smith, R.A.; Jackson, A.D. (Max-Planck-Institut fuer Kernphysik, D-6900 Heidelberg, Federal Republic of Germany). *Physical Review [Section] A: General Physics;* **33**: No. 5, 3535-3536(May 1986). Contract AC02-76ER13001.

The Feynman-Hellmann theorem shows that the exact ground-state energy of a quantum system may be obtained by integrating the potential energy with respect to a coupling constant. For approximation schemes in which the energy is actually calculated from an energy functional, we show that direct and coupling-constant integration evaluations of the energy functional are identical, provided that the energy functional is optimized.

32975 **ORMEC: A three-dimensional MHD spectral inverse equilibrium code.** Hirshman, S.P.; Hogan, J.T. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Journal of Computational Physics;* **63**: No. 2, 329-352(Apr 1986). Contract AC05-84OR21400.

The Oak Ridge Moments Equilibrium Code (ORMEC) is an efficient computer code that has been developed to calculate three-dimensional MHD equilibria using the inverse spectral method. The fixed boundary formulation, which is based on a variational principle for the spectral coefficients (moments) of the cylindrical coordinates R and Z, is described and compared with the finite difference code BETA developed by Bauer, Betancourt, and Garabedian. Calculations for Heliotron, Wendelstein VIIA, and ATF configurations are performed to establish the accuracy and mesh convergence properties for the spectral method.

File Number DE86751737.

Using the ARGUS detector at the e^+e^- storage ring DORIS II at DESY, we have studied the distribution of various topological quantities on the Y(1S) resonance and in the nearby continuum. With the help of the second Fox-Wolfram moment we determine the two-jet contribution to direct Y(1S) decays to be less than 5.3% with 95% confidence. (orig.).

32982 (DOE/ER/40036—5) Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986. Sadler, M.E. (Abilene Christian Univ., TX (USA)). Mar 1986. Contract AS05-81ER40036. 78p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86010294.

Progress is reported for the past year in pion scattering programs. The measurements include: (1) a complete set of observables in the pion-nucleon system in the momentum interval 400 to 700 MeV/c, (2) differential cross sections at low energy for pion-nucleon charge exchange, and (3) elastic and inelastic scattering of π^{+-} on ^{3}H and ^{3}He. The experiments are conducted at the Clinton P. Anderson Meson Physics Facility at Los Alamos (LAMPF).

32983 (FNAL-TM—1396) Hadroduction of heavy flavors. Leedom, I.D. (Fermi National Accelerator Lab., Batavia, IL (USA)). Apr 1986. Contract AC02-76CH03000. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010595.

The current state of knowledge of heavy quark production, particularly charm, by hadron beams is reviewed. The state of knowledge of total cross section, p/sub T/ and x/sub F/ dependence of charm hadroproduction is given. Besides D production, production of D^* is discussed. Also covered is the present evidence for hadronically produced B mesons. 28 refs., 5 figs., 3 tabs. (LEW)

32984 (HD-PY—86/01) Search for new particles in e^+e^- annihilation. Komamiya, Sachio. (Heidelberg Univ. (Germany, F.R.). Physikalisches Inst.). 1986. 47p. (CONF-850819—15). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751759.

From 12. international symposium on lepton and photon interactions at high energies; Kyoto, Japan (19 Aug 1985).

Recent experimental results for new particle searches in e^+e^- annihilation have been reviewed. Results are from PETRA (CELLO, JADE, MARK-J, PLUTO, TASSO), PEP (ASP, HRS, MAC, MARK-II, PEP-14, TPC), CESR (CLEO, CUSB), DORIS-II (ARGUS, CRYSTAL BALL). The topics covered are the following: (I) Particles expected in the (extended) standard model. (I.1) Quarks (top, fourth generation, free quarks). (I.2) Leptons (fourth generation charged and neutral leptons). (I.3) Higgs (minimal Higgs, non-minimal neutral and charged Higgs). (II) Supersymmetry. (II.1) Partner of matter fermions (e, q tilde). (II.2) Gauginos (W tilde, H, g tilde, unstable γ tilde). (III) Compositeness. (III.1) Excited leptons (esup(*), μsup(*), tausup(*)). (III.2) Coloured leptons (e_8, μ_8, ν_8). (III.3) Preon mass scale (contact interaction). (orig./HSI).

32985 (INIS-mf—9874) Experiments at CERN in 1985. (European Organization for Nuclear Research, Geneva (Switzerland)). Nov 1985. 300p. NTIS (US Sales Only), PC A13/MF A01. File Number DE86701967.

This book is a compilation of the current experimental program at CERN. The experiments listed are being performed at one of the following machines: the Super Proton Synchrotron (SPS), the Proton Synchrotron (PS) and the Synchro-Cyclotron (SC). The four experiments to be done by means of the Large Electron Positron machine (LEP) are also listed. The schematic layouts of beams and experiments at the various machines are given in the beginning of the report. The experiment goals and methods are briefly described and a schematic layout of the apparatus is included. Lists of participants and their institutions are also given. The status of the experiments (preparation, data-taking, completed) corresponds to the situation as of 1st November, 1985. "Completed" means only that data-taking is finished, not necessarily the analysis of the results; this status is kept for two years and then the experiment is removed from the catalogue. A complete list of all experiments published in this book since 1975 is given at the end of the catalogue.

32986 (ITEF—24(1984)) Angular distribution of p, d and π from the π^- (5 GeV/c) + A(C, Pb) → a(p,d,π) + X reaction near 180 deg in l.s. . Vorob'ev, L.S.; Gavrilov, V.B.; Goryainov, N.A. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 20p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701968.

Angular distribution in the range of the largest angles of secondary particle escape has been studied in detail. Data on the secondary p, d, π produced on C and Pb nuclei induced by π^- mesons of 5 GeV/c momentum are given. Irregularities in the angular distribution near 180 deg l.s. have been found. It is noted that no model exists within the framework of which the results obtained can be now decribed.

32987 (JINR—E-1-84-263) Quark (diquark) fragmentation in soft πpp interactions at P=40 GeV/c. Didenko, L.A.; Grishin, V.G.; Kuznetsov, V.A.; Metreveli, Z.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy; Tbilisskij Gosudarstvennyj Univ. (USSR)). 1984. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701969.

Submitted to the All-union seminar Quarks-84 and to the 22. International conference on high energy physics.

The quark and diquark fragmentation into π^{+-}-, K°-mesons and Λ-hyperons in soft π^-p-interactions at 40 GeV/c is studied. Fragmentation Dsup(πsup(+-)) (Xsub(F)) and invariant Fsup(πsup(+-)) (Xsub(F)) functions are compared with analogous data on ν(anti ν)p - interactions. It is shown that a good agreement exists in the region Xsub(F) > or approximately 0.15 for these different processes. The Xsub(E)-dependence of the quark and diquark fragmentation function for neutral kaons is similar to that in e^+e^- annihilation. The pickup probability of strange s(anti s) quark (lambda sub(s)) and diquark (lambda sub(qq)) relative to u(anti u) and d(anti d) quarks from the sea has been found to be equal to lambda sub(s)=0.17 and lambda sub(qq)=0.14 +- 0.03.

32988 (JINR—R-1-85-184) Measurement of total cross sections of rho°-meson interaction with intranuclear nucleons in π^-C interactions at 5 GeV/c. Abdinov, O.B.; Bajramov, A.A.; Bogush, A.A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems; AN Belorusskoj SSR, Minsk. Inst. Fiziki). 1985. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701970.

Submitted to the journal Sov. J. Nucl. Phys. .

Processes of incoherent production of rhosup(n) -mesons in πsup(-)C interactions have been investigated at 5 GeV/c, and the results are presented. Total cross sectons for interactions between intranuclear nucleons and non-polarized σ(rhosup(n) N)=25sub(-9)sup(+11) mb and longitudinally polarised σsub(L)(rhosup(0) N)=23sub(-11)sup(+14) mb rhosup(0) -mesons have been measured. The analysis of the data on the total cross section for rhosup(0) N-interactions in the (2.6-6.8) GeV interval shows that this cross section is independent of the helicity value of rhosup(0) -mesons.

32989 (KFK—4035) Search for new particles in e^+e^- annihilation. Fluegge, G. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Jan 1986. 45p. (CONF-8508139—2). NTIS (US Sales Only), PC A03/MF A01. File Number DE86901358.

From 10. Hawaii topical conference in particle physics; Honolulu, Hawaii (26 Aug 1985).

Recent results on search for new particles in e^+e^- annihilation are presented. Search for new elementary fermions, Higgs particles, supersymmetric particles, and indications of compositeness all turn out to be negative and yield limits on particle masses. Some puzzling phenomena are discussed.

32990 **Decay $D^0 \rightarrow phiK^0$.** Bebek, C.; Berkelman, K.; Blucher, E.; Cassel, D.G.; Copie, T.; DeSalvo, R.; DeWire, J.W.; Ehrlich, R.; Galik, R.S.; Gilchriese, M.G.D. (Cornell University, Ithaca, New York 14853). *Physical Review Letters;* **56**: No. 18, 1893-1896(5 May 1986).

We have observed a signal for the decay $D^0 \rightarrow phiK^0$. We find that a broad threshold enhancement in the K^+K^- mass spectrum in the decay $D^0 \rightarrow K^+K^-K^0$ is the main source of background to the $D^0 \rightarrow phiK^0$ signal. Accounting for this background, we obtain the branching fraction $B(D^0 \rightarrow phiK^0) = (1.18 +- 0.40 +- 0.17)\%$.

32991 **Study of polarized proton diffraction dissociation in the reaction p/sub arrow-up/p$\rightarrow$p$\pi^+\pi^-$p at 11.75 GeV/c.** Finley, J.P.; Wicklund, A.B.; Arenton, M.W.; Ayres, D.S.; Diebold, R.; Kramer, S.L.; May, E.N.; Nodulman, L.J.; Sauer, J.R. (Argonne National Laboratory, 9700 So. Cass Ave., Argonne, Illinois 60439). *Physical Review [Section] D: Particles and Fields;* **33**: No. 9, 2528-2562(1 May 1986). Contract W-31-109-ENG-38.

We present angular distributions and, for the first time, single-spin correlations in the diffraction-dissociation reaction p/sub arrow-up/p$\rightarrow$p$\pi^+\pi^-$p, for small momentum transfers between the polarized beam and the ($p\pi^+\pi^-$) system, at 11.75 GeV/c. The only structures seen in our 2 x 10^6-event sample turn out to be the well-known threshold enhancement in $\Delta\pi$ and the N(1700), which appears to involve both $\Delta\pi$ and N(1520)π. The production process exhibits a slope-mass correlation and patterns of helicity nonconservation seen in higher-energy diffractive processes. We also see evidence for a complex helicity structure in the spin correlations. We show that the threshold enhancement is unambiguously S wave in character, while the N(1700) appears to be a mix of states. The overall similarities between our data and those at higher energies, together with the rich structures contained in the angular-distribution correlations (we measure 315 joint moments in each mass and t bin), make our data base highly relevant for theoretical analysis of exclusive diffraction.

32992 **Observation of a narrow enhancement in phiKK and phi$\pi\pi$ final states produced in 400-GeV p-N interactions.** Green, D.R.; Fenker, H.C.; Lai, K.W.; LeBritton, J.; Lin, Y.C.; Pifer, A.E.; Davenport, T.F.; Goldman, J.H.; Hagopian, S.L.; Lannutti, J.E. (Fermilab, Batavia, Illinois 60510). *Physical Review Letters;* **56**: No. 16, 1639-1642(21 Apr 1986).

We observe a narrow enhancement in phiK^+K^- and phi$\pi^+\pi^-$ final states, with a mass of 2.141 +- 0.012 +- 0.010 GeV/c^2 and width of 0.049 +- 0.028 GeV/c^2. The relative branching ratio is $B(M \rightarrow phiK^+K^-)/B(M \rightarrow phi\pi^+\pi^-) = 0.49$ +- 0.16, inconsistent with M being a qq-bar state.

32993 **Λ production in e^+e^- annihilations at 29 GeV: comparison with Lund-model predictions.** Baringer, P.; Abachi, S.; Akerlof, C.; Beltrami, I.; Blockus, D.; Bonvicini, G.; Brabson, B.; Brom, J.M.; Bylsma, B.G.; Chapman, J. (Argonne National Laboratory, Argonne, Illinois 60439; Indiana University, Bloomington, Indiana 47405; Lawrence Berkeley Laboratory, Berkeley, California 94720; University of Michigan, Ann Arbor, Michigan 48109; Purdue University, West Lafayette, Indiana 47907). *Physical Review Letters;* **56**: No. 13, 1346-1349(31 Mar 1986). Contract W-31-109-ENG-38;AC02-76ER01112;AC03-76SF00098;AC02-76ER01428.

This paper presents measurements of the inclusive production cross sections of Λ baryons in e^+e^- annihilations at $\sqrt{s} = 29$ GeV. The data sample corresponds to an integrated luminosity of 256 pb^{-1} collected with the High-Resolution Spectrometer at the SLAC storage ring PEP. Comparisons are made to the predictions of the Lund model. The data are well described with use of a strange diquark suppression parameter, (us/ud)/(s/d), of 0.89 +- 0.10/sub -0.16//sup +0.56/, and the measured Λ/sub c/$\rightarrow\Lambda$+X branching ratio of (23 +- 10%).

32994 **Recent progress in understanding trinucleon properties.** Friar, J.L.; Gibson, B.F.; Payne, G.L. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, NM). *Annual Review of Nuclear and Particle Sciences;* **34**: 403-433(1984).

The traditional approach of nuclear physics describes nuclei by means of a model in which nonrelativistic nucleons interact via two-body or pair-wise forces. In this brief review we concentrate entirely on the three- and four-nucleon systems, with emphasis on three-nucleon calculations using realistic forces. We focus our discussion on advances in three topics that have preoccupied researchers recently: meson-exchange currents and the trinucleon charge and magnetic densities and form factors; three-nucleon forces and their effect on observables, and the effect of the nucleon-nucleon tensor force on observables. Clearly, a comprehensive study of any of these topics is beyond our resources. Fortunately, several related themes recur and unite these disparate topics, and we concentrate on these.

32995 **Improved b lifetime measurement from MAC.** Ford, W.T. (Univ. of Colorado, Boulder, CO). pp 77-90 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

Two recent publications, from the MAC and Mark II collaborations, have reported the somewhat surprising result that the lifetime of particles made up of b quarks is in the 1 to 2 picosecond range, or somewhat longer than the lifetimes of charm particles. Although the charm decays are favored transitions while those of b particles depend upon off-diagonal elements of the weak flavor mixing matrix, the smallness of the b decay rates in face of the large available phase space indicates that the off-diagonal elements are indeed very small. The possibility for complete determination of the mixing matrix was brought significantly nearer by the availability of the lifetime information; what is needed now is to reduce the uncertainty of the measurements, which was about 33% for both experiments. We describe here an extension of the b lifetime study with the MAC detector, incorporating some new data and improvements in the analysis.

32996 **(BNL—37928) Prospects for SSC physics.** Paige, F.E. (Brookhaven National Lab., Upton, NY (USA)). Mar 1986. Contract AC02-76CH00016. 21p. (CONF-860168—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009918.

From Workshop on observable standard model physics at the SSC; Los Angeles, CA, USA (15 Jan 1986).

The SSC is primarily designed to explore the physics of the 1 TeV mass scale. Since new heavy particles will decay either into other new particles or into the quanta of the standard model, the main goal of SSC experiments will be to identify and to measure these quanta well. Progress in simulating events and in understanding the signature and backgrounds for standard-model physics is described. 51 refs.

32997 **(BNL—38034) ISAJET 5.20: a Monte Carlo event generator for pp and anti pp interactions.** Paige, F.E.; Protopopescu, S.D. (Brookhaven National Lab., Upton, NY (USA)). Mar 1986. Contract AC02-76CH00016. 17p. (CONF-860168—3). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010538.

From Workshop on observable standard model physics at the SSC; Los Angeles, CA, USA (15 Jan 1986).

ISAJET is a Monte Carlo program which simulates pp and anti pp interactions at high energy. It is based on perturbative QCD cross sections, leading order QCD radiative corrections for initial and final state partons, and phenomenological models for jet and

beam jet fragmentation. This article describes ISAJET 5.20, which includes a new model for beam jets in hard interactions. 25 refs.

32998 **(CBPF-NF—037/85) Gluon and q anti q mixing in the eta-eta' G (identical to iota (1440)) system.** Antunes, A.C.B.; Caruso, F.; Predazzi, E.; Tiomno, J. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1985. 28p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701957.

A mixing scheme among three pseudoscalar mesons eta-eta' and iota (1440) is proposed in order to analyze their q anti q and gluonic components. Inequalities follow from requiring the consistency of the scheme and the range permitted for the mass of the pure gluonic state (glueball) turns out to be rather small. The resulting picture is in good agreement with the overall phenomenology and with the (rather scarce) data on the subject.

32999 **(CBPF-NF—062/85) Non-Abelian Aharonov-Bohm effect in the framework of Feynman pseudo-classical path integrals.** Botelho, L.C.L.; Mello, J.C. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro; Rio de Janeiro Univ. (Brazil). Inst. de Fisica). 1985. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701965.

The non-Abelian Aharonov-Bohm effect is analyzed in the Feynman Path Integrals framework generalized to pseudo-classical mechanics.

33000 **(DESY—85-132) Testing the WWγ coupling of the standard model at p anti p-colliders.** Cortes, J.; Herzog, F.; Hagiwara, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Bern Univ. (Switzerland). Inst. fuer Theoretische Physik). Dec 1985. 53p. (CERN-TH—4212/85). NTIS (US Sales Only), PC A04/MF A01. File Number DE86751746.

The measurement of the magnetic moment μsub(W) of the weak boson W is crucial to test the non-abelian gauge theory of the electroweak interaction formulated by Glashow, Salam and Weinberg. We propose methods to measure μsub(W) at hadron colliders via the process p anti p->W$^-\gamma$X; W$^-$->l$^-$anti νsub(l) and p anti p->W$^-$X; W$^-$->γl$^-$anti νsub(l). The helicity amplitude of the parton sub-process factorize a la Mikaelian in lowest order of the fine structure constant α, leading to peculiar angular distributions among the initial and final state particles. We make extensive numerical studies at the Tevatron collider energy $\sqrt{s}$=2 TeV of these distributions applying experimentally feasible cuts. Furthermore we investigate the main background p anti p->W$^-$jetX; W$^-$->l$^-$anti νsub(l) where the jet fakes a single isolated photon. The effect of the finite W-width is discussed and found to be small. The sensitivity of our results to higher order QCD corrections is considered qualitatively but remains unknown quantitatively. (orig.).

33001 **(DESY—85-137) Is a light gluino still compatible with the CERN collider data.** Hagiwara, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Dec 1985. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751744.

The QCD 2->3 contribution to large missing transverse momentum events from light gluinos of mass 3-5 GeV is estimated by using the gluon-to-gluino splitting approximation to the squared matrix elements and the scale dependent gluino fragmentation function. The 2->3 processes give the dominant contribution over the 2->2 contribution, confirming the trend observed by Herzog and Kunszt for heavier gluinos. Most events have back-to-back jet configurations in both mono- and dijet events and would appear as an excess of jet-jet fluctuation at the CERN collider. Nonobservation of such effects in the 1984 data would rule out m sub(g tilde) down to 5 GeV but probably not below 3 GeV. (orig.).

33002 **(DESY—85-138) Monte Carlo study of the standard SU(2) Higgs model.** Langguth, W.; Weisz, P.; Montvay, I. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Karlsruhe Univ. (T.H.) (Germany, F.R.). Inst. fuer Theoretische Kernphysik; Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Dec 1985. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751743.

The SU(2) Higgs model with scalar doublet field is numerically investigated on lattices with size between 8^4 and 12^4. Masses and zero momentum couplings are determined at several points of the three-dimensional coupling parameter space. Particular interest is given to questions related to the order of the confinement-Higgs phase transition. High statistics measurements in the region of nonperturbative scalar self-coupling and weak gauge coupling approximately equal to the physical value in the standard SU(2) x U(1) electro-weak theory give a Higgs-mass to W-mass ratio of 6.4+-0.8. The Higgs-WW coupling determined at these points is smaller than the value usually assumed in the standard model, implying that the width of the high mass Higgs-boson could still be relatively small, unless multi-W decays dominate. (orig.).

33003 **(DESY—86-006) Another higher order Langevin algorithm for QCD.** Kronfeld, A.S. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Jan 1986. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751739.

This note provides an algorithm for integrating the Langevin equation which is second order. It introduces a term into the drift force which is a product of the Gaussian noise and a second derivative of the action. The specific application presented here is for nonabelian gauge theories interacting with fermions, e.g. QCD, for which it requires less memory than the Runge-Kutta algorithm of the same order. The memory and computational requirements of Euler, Runge-Kutta, and the present algorithm are compared. (orig.).

33004 **(INIS-mf—9878) Stochastic mechanics of a Dirac particle in two space-time dimensions.** De Angelis, G.F.; Jona-Lasinio, G.; Serva, M.; Zanghi, N. (Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS), Bielefeld (Germany, F.R.)). Sep 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751755.

BiBoS. No. 71.

We develop the stochastic mechanics of a Dirac particle interacting with an arbitrary external electromagnetic field in two dimensional Minkowski space. Our construction provides a consistent stochastic interpretation of solutions of the true (real time) Dirac equation and, in particular, gives a stochastic description of the Zitterbewegung. (orig.).

33005 (INIS-SU—320, pp 154-168) **Finite-energy analogs of Pomeranchuk theorems.** Vernov, Yu.S.; Mnatsakanova, M.N.; Chubarov, M.S. (Moskovskij Gosudarstvennyj Univ., USSR. Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki; Moskovskij Gosudarstvennyj Univ., USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The paper generalizes the Pomeranchuk theorem for finite energies. Restriction on the difference of $\Delta\sigma$ identy sign σsub(+)-σsub(-) total cross-sections for the given restriction on the growth of a real part of fsub(α)(E) antisymmetric amplitude i.e. directly "the Pomeranchuk theorem for finite energies has been obtained. Finite-energy analog of the Pomeranchuk inverse theory has been considered as well as restrictions on real and imaginary parts of fsub(s)(E) symmetric amplitude.

33006 (INIS-SU—320, pp 213-230) **Weak and electromagnetic interaction effects in a strong magnetic field.** Loskutov, Yu.M. (Moskovskij Gosudarstvennyj Univ., USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Asymptotics of quantum electrodynamics (QED) within the limit of a superstrong magnetic field is investigated. Field asymptotics of QED basic operators: electron propagator, polarization and mass operators and vertex function - is considered. Some effects of electromagnetic and weak interactions in a strong external magnetic field (two-photon production of neutrino pairs and nuclear electron bremsstrahlung) are discussed.

33007 (INIS-SU—320, pp 38-71) **Relativistic strings with a finite number of degrees of freedom.** Plyushchaj, M.S.; Pron'ko, G.P.; Razumov, A.V. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Models obtained in freezing an infinite number of degrees of freedom of the Nambu-Goto relativistic string and the NeveuSchwartz string with fermion degrees of freedom and allowing quantization in four-dimensional space-time are suggested. A classical formulation of the Nambu-Goto relativistic string is considered. The model quantization is performed in the representation where the energy-string momentum vector is diagonal. The Neveu-Schwartz model was considered analogously. Analogs of the Newton-Wigner coordinates having the Dirac Zero brackets for the components were constructed for both systems. The classical and quantum theories of states with zero mass are investigated.

33008 (INIS-SU—320, pp 79-105) **Model of hadron elastic scattering and diffraction dissociation processes at high energies.** Troshin, S.M.; Tyurin, N.E. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A model of elastic scattering and processes of hadron diffraction dissociation for high energies is considered. The model is based on common properties of scattering-unitarity and analyticity matrix. Calculations were performed by means of equations of the field quantum theory for 2→2 and 2→n transition amplitudes. Representations on a hadron quark structure are used in constructing cores of these equations. A mechanism of polarization appearance of inclusive-produced Λ hydperons is investigated. The model suggested describes basic experimental regularities.

33009 (INIS-SU—320, pp 106-110) **Model of hadron elastic scattering and diffraction dissociation processes at high energies. 2. Asymptotic behaviour of hadron form factors.** Troshin, S.M.; Tyurin, N.E. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Behaviour of elastic hadron form factors at high transferred momenta was studied within the framework of a quark model of elastic scattering and hadron diffraction dissociation processes. An asymptotic expression for hadron form factors was derived. Coupling between the asymptotic behaviour of elastic hadron form factors and the behaviour of complete cross-sections of the hadron interaction for high energies has been established.

33010 (INIS-SU—320, pp 111-126) **On a behaviour of the form factor of the π^0 meson decay in a Dalitz pair in a small invariant mass region.** Kozlov, G.A.; Kuleshov, S.P.; Sanadze, V.V.; Skachkov, N.B.; Savrin, V.I. (Joint Inst. for Nuclear Research, Dubna, USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The behaviour of $\pi^0 \to e^+ e^- \gamma$ decay form factor in the region of small invariant masses is investigated. A quasipotential approach in the quantum theory is applied for describing π^0 meson decay. The approach considered permits the determination of the type of relativistic wave functions describing relative quark motion. Solutions of three-dimensional relativistic equations for a fermion-antifermion system are used as model wave functions. It is concluded that the π meson structure must become apparent in the region of small values of the square of the Dalitz pair invariant mass.

33011 (INIS-SU—320, pp 127-134) **Finite-energy sum rules and their consequences.** Enkovskij, L.L.; Struminskij, B.V. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A method of finite-energy sum rules is applied for investigating deep inelastic lepton scattering with hadrons (DILSH). It is suggested that the DILSH structure function complies with q^2 dispersion relation (q^2-momentum transferred with current). The relation between the DILSH structure function and total hadron-hadron scattering has been found. It is shown that different sum rules used in quantum hydrodynamics result from finite-energy sum rules.

33012 (INIS-SU—320, pp 169-176) **KNO-scaling violation at superhigh energies.** Kajdalov, A.B.; Ter-Martirosyan, K.A. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A problem of KNO scaling violation in the case of superhigh energies is discussed within the framework of a string model of supercritical pomeron. In this model considering along with cutting cylindrical diagrams also polyperipherical diagrams the KNO scaling is approximate and is violated with energy growth. Theoretical predictions for the multiplicity distribution of charged particles in the anti pp interaction at 540 GeV are compared with new data of IA5 group. It is shown that experimental data of the IA5 group confirm the predictions of the pomeron string model.

33013 (INIS-SU—320, pp 231-238) **Non-leptonic weak baryon decays in the bag model.** Ebert, D.; Kallies, W. (Humboldt-Universitaet, Berlin, German Democratic Republic. Sektion Physik). 1984. NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The review for charmed baryon decays based on the MJT-bag model is given. Some typical non-leptonic weak decays of the lower mass charmed baryons Λsub(c)sup(+), Asup(+,0) and T⁰ are discussed. The processes Λsub(c)sup(+)→(p anti Ksup(0), Ξsup(0)Ksup(+), Σsup(0)πsup(+)), Asup(+) → Ξsup(0)πsup(+), Asup(0) → Ξsup(-)πsup(+) and Tsup(0) → Ξsup(0) anti K sup(0) are considered. It is shown that the prediction for the rate GITA(Λsub(c)sup(+)→p anti Ksup(0)) is close to the experimental value GITA(Λsub(c)sup(+)→p anti Ksup(0))=(1.00sub(-0.78)sup(+0.86)10sup(11) ssup(-1.5)). The ratio of partial widths for the Σsup(0)πsup(+) and p anti Ksup(0) channels, GITA(Λsub(c)sup(+)→Σsup(0)πsup(+))consistent with recent data on Λsub(c)sup(+) decays obtained with Fermilab bubble chamber.

33014 (INIS-SU—320, pp 309-320) **On a behaviour of inclusive hadron processes at large transferred momenta and energies CERN ISR and SPS COLLIDER.** Drenska, S.B.; Mavrodiev, S.Shch.; Sisakyan, A.N. (Joint Inst. for Nuclear Research, Dubna, USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Behaviour of cross-sections of inclusive hadron processes for high transferred momenta is discussed. Data on cross-sections for the p anti p (pp) interactions measured at the CERN ISR and SPS COLLIDER accelerators are given. Possibility for describing the cross-sections of such reactions within the framework of rules of quark count of anomalous dimensionalities in QCD is considered. It is shown that in the leading logarithmic approximation the QCD rules of quark count of anomalous dimensionalities permit to describe experimantal data at >= 40 GeV energy values.

33015 (INIS-SU—320, pp 321-338) **New strict finite-energy upper and lower boundaries for hadron scattering amplitudes.** Kelemen, V.I.; Lomsadze, Yu.M. (Severo-Osetinskij Gosudarstvennyj Univ., Ordzhonikidze, USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Finite-energy upper and lower boundaries for hadron scattering amplitudes were obtained. The PIsup(+-)p→PIsup(+-)p reactions of forward scattering are considered. It is shown that different inequalities established with methods of the harmonic functions theory permit one to obtain not only asymptotic but also conditional finite-energy restrictions on hadron scattering amplitudes.

33016 (INIS-SU—320, pp 252-261) **Meson resonance production in the parton model with account for transverse quark motion.** Garsevanishvili, V.R.; Kartvelishvili, V.G.; Kuratashvili, G.O.; Topuriya, T.P.; Ehsakiya, Sh.M. (Tbilisskij Gosudarstvennyj Univ., USSR. Inst. Fiziki Vysokikh Ehnergij). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A quark-parton model of quark coalescence with provision for their transverse motion is discussed. Model predictions are compared with experimental distributions rhosup(0) and K* sup(+-)-mesons produced in the pp→rhosup(0)+chi and pp→K*sup(+-)+chi reactions at 12 and 24 GeV/c. The model describes well cross-sections of vector meson production in the above-mentioned reactions. It follows from the data contained in the paper that the constant of quark-antiquark pair coalescence to meson is independent of energy in the momentum range of 12-24 GeV/c.

33017 (INIS-SU—321, pp 323-336) **Effects of polarization and angular asymmetry of neutrino radiation in a magnetic field.** Loskutov, Yu.M. (Moskovskij Gosudarstvennyj Univ., USSR). 1984. (In Russian). NTIS (US Sales Only), PC A19/MF A01. File Number DE86780458. (CONF-8407160—Vol.1).

From 7. seminar on problems of high energy physics and quantum field theory; Protvino, USSR (1 Jul 1984).

Magnetic field effects on polarization states of electrons are investigated. It is shown that induced polarization of electrons along the field is possible under their irradiation by the electromagnetic wave shaped in the resonance with the difference of electron energy levels in the field and polarized in the plane parallel to the field. Expressions for polarization degree and relaxation time are given. The effect of angular asymmetry of neutrino radiation conditioned by magnetobreaking, photonuclear and other processes in the magnetic field is forecasted.

33018 (INIS-SU—321, pp 303-314) **On a hard inclusive spectrum of charm particles.** Slavnov, D.A. (Moskovskij Gosudarstvennyj Univ., USSR). 1984. (In Russian). NTIS (US Sales Only), PC A19/MF A01. File Number DE86780458. (CONF-8407160—Vol.1).

From 7. seminar on problems of high energy physics and quantum field theory; Protvino, USSR (1 Jul 1984).

Processes of charmed particle production in inclusive interactions are investigated. Data on the total cross-section of charmed particle production in proton-proton collisions are presented. The main contribution in the cross-section is made by quark-antiquark birth of charmed quarks. Inclusive spectra of charmed baryons and mesons are studied. For the same value of scaling variable x the number of D^0-mesons is two times the number of D^--mesons. The same ratio is true for anti D^0 and anti D^+ mesons.

33019 (INIS-SU—324, pp 20-23) **Possibilities of the search for short-lived Dsub(S)sup(0) mesons.** Tolstov, K.D.; Khushvaktova, A.; Shabratova, G.S. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of High Energy). 1984. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86780460.

In JINR rapid communications. Collection.

Premises for the existence and possibilities of the search for Dsub(S)sup(0)-mesons generated in collisions of fast hadrons with photoemulsion nuclei are investigated.

33020 (INP—1172/PH) **Spin effects in hadronic collisions at large momentum transfers.** Szwed, J. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 78p. NTIS (US Sales Only), PC A05/MF A01. File Number DE86701958.

The role of the spin in hadron-hadron collisions at large psub(perpendicular) is investigated. The short distance diagrams and the end-point (x-1) contribution give phenomenologically similar results for the elastic nucleon-nucleon differential cross-section but differ significantly when looking at the spin-spin asymmetries. The spin analysis suggests the dominance of the end-point diagrams at large angles and present energies. The limits on the nucleon wave function are obtained from the comparison of spin effects in exclusive and inclusive reactions. Higher order results exclusive channels are reviewed. In the inclusive production we propose a simple model of baryon polarization at large transverse momentum which accounts qualitatively for all experimental data in these processes. Other models are also reviewed. The whole investigation suggests that the spin effects are a relatively clear probe of the complicated hadron dynamics.

33021 (ITEF—51(1984)) **Observation of kinematic resonance reflection in mass spectra of multiparticle reactions.** Aleshin, Yu.D.; Kiselevich, I.L.; Mel'nichenko, I.A.; Shkarlet, V.D.; Shidlovskij, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 31p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701960.

The mechanism of kinematic reflection of resonances for the π^- rho → $n\pi^+\pi^+\pi^-\pi^-$ multiparticle reaction at 4.35 GeV/c momentum impinging π^- mesons, when events of this reaction were selected according to cosine of angle of particle divergence ($n\pi^+\pi^+\pi^-$) less than - 0.95 in the reaction center system, is considered. It is experimentally confirmed that the $\pi^-P \rightarrow rho^0\pi^+\Delta^-$ reaction takes place during this selection and taking account of this reaction together with the phase volume of the reaction describes satisfactorily experimental spectra in the $n\pi\pi$ particle system.

33022 (ITEP—118(1984)) **Magnetic moments of Δ-isobar and Ω^--hyperon in quantum chromodynamics.** Belyaev, V.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701961.

The magnetic moments of Δ-isobar and Ω^--hyperon are calculated using QCD sum rule method. The results obtained are by a factor of two smaller than the SU(6) quark model predictions.

33023 (JINR—R-2-85-198) **To the problem on a nature of the G(1590) meson.** Ivanov, M.A.; Muradov, R.Kh. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Azerbajdzhanskij Gosudarstvennyj Univ., Baku (USSR)). 1985. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701964.

Submitted to the journal JETP Lett. .

The properties of the G(1590)-meson recently discovered are discussed in the framework of the quark-gluon-virton model. This model is based on the assumption that the interaction between hadrons in the low-energy region is due to the exchange by confined quark and gluon fields. It is shown that the present experimental data indicate that the G(1590)-meson is the gluonium.

33024 (MPI-PAE/Exp.El.—157) **Standard axion reconsidered.** Mageras, G. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen (Germany, F.R.). Werner-Heisenberg-Inst. fuer Physik). Nov 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751758.

We show that within the standard axion model, there is an allowed range of short axion lifetimes which has not yet been excluded experimentally. The implications of this in connection with the possible production of a new neutral particle in heavy-ion collisions is discussed. We propose a new search for axion production in upsilon decays which would extend the test of the axion model to shorter lifetimes. (orig.).

33025 **(UFPB-DF—11/85) Bulk viscosity driven inflationary model.** Waga, I.; Falcao, R.C.; Chanda, R. (Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica; Rio de Janeiro Univ. (Brazil). Inst. de Fisica). 1985. 6p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701966.

Bulk viscosity associated with the production of heavy particles during the GUT phase transition can lead to exponential or 'generalized' inflation. The condition of inflation proposed is independent of the details of the phase transition and remains unaltered in presence of a cosmological constant. Such mechanism avoids the extreme supercooling and reheating needed in the usual inflationary models. The standard baryongenesis mechanism can be maintained.

33026 **A simple method for computing the relativistic Compton scattering kernel for radiative transfer.** Prasad, M.K.; Kershaw, D.S.; Beason, J.D. (Lawrence Livermore National Laboratory, Livermore, California 94550). *Applied Physics Letters;* **48**: No. 18, 1193-1195(5 May 1986). Contract W-7405-ENG-48.

The Klein-Nishina differential cross section averaged over a relativistic Maxwellian electron distribution is analytically reduced to a single integral, which can then be rapidly evaluated in a variety of ways. This is, to our knowledge, the first correct computation of the Compton scattering kernel.

33027 **Deuteron as a soliton in the Skyrme model.** Braaten, E.; Carson, L. (Department of Physics and Astronomy, Northwestern University, Evanston, Illinois 60201). *Physical Review Letters;* **56**: No. 18, 1897-1900(5 May 1986). Contract FG02-85ER40228.

The energy in the baryon-number-2 sector of the Skyrme model is shown to be minimized by a localized static soliton solution. If this solution has a particular discrete symmetry, the lowest-energy state of the soliton can have the spin, isospin, and parity quantum numbers of the deuteron. This identification is supported by approximate calculations of its charge radius and its magnetic and quadrupole moments.

33028 **Prediction of the four-generation Kobayashi-Maskawa matrix.** Johnson, R.; Schechter, J.; Gronau, M. (Physics Department, Syracuse University, Syracuse, New York 13244-1130). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2641-2652(1 May 1986). Contract FG02-85ER40231.

We give a detailed investigation of the four-generation case of our previously proposed model which predicts all the parameters of the Kobayashi-Maskawa matrix in terms of quark masses. An interesting aspect of this model is that both the t- and b′-quark masses are constrained to be relatively light. Furthermore the mixing with the fourth generation is fairly substantial and it typically makes an important contribution to the CP-violation parameter ϵ. .AE

33029 **Mirror-lepton phenomenology in a left-right model with ultralight Dirac neutrinos.** Albright, C.H.; Oliensis, J. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510 and Northern Illinois University, DeKalb, Illinois 60115). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2602-2607(1 May 1986). Contract W-31-109-ENG-38.

A study of the production and decay of heavy mirror leptons is presented in the framework of a left-right model that yields ultralight Dirac neutrinos. Qualitative limits on the masses of the light neutrinos are also presented in terms of bounds on the heavy-mirror-lepton masses.

33030 **Concavity of the quarkonium potential.** Bachas, C. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2723-2725(1 May 1986). Contract AC03-76SF00515.

The heavy-quark—antiquark potential is shown to be a monotone nondecreasing and concave function of the separation. This property holds independent of the gauge group and the details of the matter sector.

33031 **Factorization property of the deuteron.** Brodsky, S.J.; Ji, C. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2653-2659(1 May 1986). Contract AC03-76SF00515.

Using a simple field-theoretic model we show that, in the zero-binding limit, the relativistic deuteron wave function has a cluster decomposition; i.e., it factors into two separate nucleon wave functions convoluted with a body wave function. The framework of the calculation is a Fock-state expansion at equal time on the light cone. Assuming a quark-interchange mechanism, we then derive the deuteron reduced form factor at large momentum transfer, while recovering the standard impulse-approximation form at small momentum transfer.

33032 **Critical behaviour in baryonic matter.** Berg, B.; Engels, J.; Kehl, E.; Waltl, B.; Satz, H. (Florida State Univ., Tallahassee, USA. Dept. of Physics; Bielefeld Univ., Germany, F.R.. Fakultaet fuer Physik; Bielefeld Univ., Germany, F.R.. Fakultaet fuer Physik; Brookhaven National Lab., Upton, NY, USA. Physics Dept.). *Zeitschrift fuer Physik* [*Sektion*] *C: Particles and Fields;* **31**: No. 1, 167-174(May 1986).

First we consider the phenomenology of deconfinement and chiral symmetry restoration for strongly interacting matter at nonvanishing baryon number density. Subsequently, we present numerical results obtained by a Monte Carlo evaluation of statistical QCD on an 8^3 x 3 lattice, using Wilson fermions with Nsub(f)=2, in fourth order hoping parameter expansion, and supressing the imaginary part of the fermion action. We consider baryonic chamical potentials up to $\mu a=0.6$ (μ/Asub(L)approx.=200); in this range, the critical parameters for deconfinement and chiral symmetry restoration are found to coincide. (orig.).

33033 **Flavor-changing Yukawa coupling in the standard model and muon polarization in K/sub L/→μmu-bar.** Botella, F.J.; Lim, C.S. (Physics Department, Brookhaven National Laboratory, Upton, New York 11973). *Physical Review Letters;* **56**: No. 16, 1651-1654(21 Apr 1986). Contract AC02-76CH00016.

The muon longitudinal polarization P/sub L/ in K/sub L/ →μmu-bar decay is investigated in the standard model. The induced s-bardH vertex responsible for P/sub L/ turns out to be unexpectedly "large." The measurement of P/sub L/ above $\sim 10^{-3}$ will, therefore, be a signal of the existence of a rather light Higgs boson (M/sub H/< or $\approx$10 GeV). It is also shown that the mechanism of gauge-dependence cancellation between Higgs-boson-exchange and box diagrams works even in the standard model.

33034 **Higgs mass in Salam-Weinberg theory.** Beg, M.A.B. (Rockefeller Univ., New York, NY). pp 203-217 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

The Salam-Weinberg theory, of electroweak interactions, is discussed under the premise that the pure λ/phi/^{4} theory is trivial in four dimensions. Arguments underlying this premise are reviewed; it is shown that the requirement of consistency leads to an upper bound of about 125GeV for the Higgs-mass, if the mass of the top-quark is less than 80GeV and the theory is realized in the canonical way.

33035 **Experimental status of neutrino masses.** Boehm, F.H. (California Inst. of Technology, Pasadena, CA). pp 123-143 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

Neutrino physics faces a number of interesting challenges, among them are the following fundamental questions: Are neutrinos massive? Are physical neutrinos pure or mixed states? Are neutrinos Dirac or Majorana particles? Evidence for neutrino mass and mixing would lend support to grand unified theories or other schemes beyond the standard electroweak model. From astrophysics and cosmology, arguments can be made that the mass of neu-

trinos, summed over all flavors cannot exceed a value of about 100 eV. What are the experimental possibilities allowing tests for neutrino mass and neutrino mixing?

33036 **New results on flavor production at PEP.** Barbaro-Galtieri, A. (Univ. of California, Berkeley, CA). pp 273-318 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

This report includes results from five PEP detectors: DELCO, HRS, MAC, MARK II and TPC. All, except the TPC, are presently taking data at PEP. The TPC is being upgraded: a new superconducting coil is being installed and other improvements are being implemented. The results discussed here are either new or improved since the Cornell Conference. Other results from PEP have been reported at this Conference by George Trilling (MARK II) on /tau/, D /sub o/, and b lifetimes and a new limit on the tau neutrino mass, and by Bill Ford on the MAC measurement of the b lifetime. Section 2 will discuss new results on Particle Searches and a limit on neutrino generations. Section 3 includes new data on weak couplings of c and b quarks. In Section 4 various new results on hadron production are reported. Section 5 summarizes the new results. All data were obtained in e^+e^- collisions with total energy $\sqrt{s}$=29 GeV.

33037 **Status of rare decay experiments.** Littenberg, L.S. (Brookhaven National Laboratory, Upton, NY). pp 509-544 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

In the next few years rare decay experiments should provide stringent tests of the standard model. Limits on lepton flavor violating processes will be pushed down to levels of 10^{-11}-10^{-13} which correspond to new physics scales in the tens or hundreds of TeV. A number of K decays like K/sub L//sup O/ $\rightarrow e^+e^-$, π/sup O/ e^+e^-, $K^+ \rightarrow \pi^+ \nu^-\nu$, etc., will be probed down to or near the level of the highly suppressed standard model contribution, affording large windows for new physics.

33038 **Anomalons, honey and glue in nuclear collisions.** Gyulassy, M. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA). pp 237-273 of Short-distance phenomena in nuclear physics. Vol. 104. Boal, D.H.; Woloshyn, R.M. New York, NY; Plenum Press (1983). (CONF-8208213—).

From Pacific summer institute of the Theoretical Physics Division of the Canadian Association of Physicist; Vancouver, BC, Canada (23 Aug 1982).

This chapter covers three rapidly evolving areas of current research in the field of high energy nuclear collisions. Attempts to determine whether novel nuclear states exist, whether nuclei flow like honey, and whether a quark-gluon plasma can be produced. Examines anomalons, hungry quarks, pion condensation, global analysis, nuclear honey, nuclear stopping power and longitudinal growth, and proper energy density achieved. Reviews inconclusive data showing that collective nuclear flow could take place at lower energies. Presents cascade calculations illustrating various flow phenomena. Analyzes the prospects of probing the quark-gluon plasma. Investigates cosmic ray data with events showing charge particle multiplicities up to 1000. Concludes that high enough energy densities can indeed be achieved in nuclear collisions to produce an ideal quark-gluon plasma.

33039 **Pions from and about heavy ions.** Rasmussen, J.O. (Lawrence Berkeley Lab., Univ. of California, Berkeley, CA). pp 275-295 of Short-distance phenomena in nuclear physics. Vol. 104. Boal, D.H.; Woloshyn, R.M. New York, NY; Plenum Press (1983). (CONF-8208213—).

From Pacific summer institute of the Theoretical Physics Division of the Canadian Association of Physicist; Vancouver, BC, Canada (23 Aug 1982).

This chapter proposes that it is energetically possible to produce a pion when nuclei collide at energies in the center-of-mass system that exceed the rest mass energy of the pion of 140 MeV. Discusses pion thermometry; pion spectra; pionic orbits of nuclear size; pion confinement in the fireball; anomalons; and Schroedinger equation solutions for pionic atoms. Concludes that there is need for fundamental theoretical work to pin down the effects on the pion optical potential for multiple pions and the consequent di-delta admixtures. Notes that moderate alterations of the CMS potential of neutron-rich nuclei can give somewhat deeper bound pion s-states with lifetimes that can get into the anomalon range.

33040 **(DESY—85-143) Calculation of the O(αsub(s)^2) parity-violating structure functions in e^+e^-->q anti qg.** Koerner, J.G.; Schuler, G.; Kramer, G.; Lampe, B. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Mainz Univ. (Germany, F.R.). Inst. fuer Physik; Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Dec 1985. 49p. (MZ-TH—85-19). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751734.

We calculate the two nonvanishing O(αsub(s)^2) parity-violating structure functions that contribute to e^+e^-->q anti qg. We discuss how these can be measured. We work with massless quarks and gluons and use dimensional regularization to regularize ultraviolet and infrared singularities. We carefully discuss how to deal with γ_5 in the dimensional regularization scheme when infrared singularities are present. (orig.).

33041 **MIT bag model with chiral solitons.** Duck, I.; Reed, J. (Bonner Nuclear Laboratories, Physics Department, Rice University, Houston, Texas 77251). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2679-2687(1 May 1986).

A chiral-invariant version of the MIT bag model is solved numerically including the (σ,π,quark) interactions of the chiral-soliton model based on the Gell-Mann—Levy theory of hidden chiral symmetry. Rafelski's virial theorem is extended to the case of bagged quarks and provides a check of the numerical solutions. For strong meson-quark coupling, the bag plays almost no role and we recover a description of the nucleon similar to that of Birse and Banerjee. In the opposite limit, where the bag-confined quarks interact weakly with the σ and π mesons, we have a picture similar to the cloudy-bag model. Consideration of the pion-nucleon σ commutator favors the latter picture.

33042 **Weak mixing angles in unified theories.** Wali, K.C. (Syracuse Univ., Syracuse, NY). pp 434-458 of Flavor mixing in weak interactions. Vol. 20. Chau, L.L. New York, NY; Plenum Press (1984). (CONF-8403113—).

From Europhysics conference; Erice, Italy (4 Mar 1984).

The replication of families or generations with identical electroweak interactions in the low energy region presents a deep mystery. It is the historic e-μ puzzle in a considerably extended form. Horizontal or intragenerational interactions and the consequent mixing angles govern a wide range of phenomena concerning both old and new particles. In this review, I discuss the recent theoretical ideas and two specific models pertaining to horizontal symmetries.

33043 **(BI-TP—86/1) Existence of localized solutions of (1+1)-dimensional non-linear Dirac equations with scalar self-finteraction.** Stubbe, J. (Bielefeld Univ. (Germany, F.R.). Zentrum fuer Interdisziplinaere Forschung; Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS), Bielefeld (Germany, F.R.); Bielefeld Univ. (Germany, F.R.). Fakultaet fuer Physik). 1986. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751756.

BiBoS. No. 128.

Necessary and sufficient conditions for the existence of localized solutions of the classical equations of motion for (1+1)-dimensional non-linear spinor fields are presented. Furthermore we give existence conditions for non-linear second order equations obtained

as a Klein-Gordon limit of the considered spinor field equations. (orig.).

33044 (BONN-HE—85-37) Classification of open string models. Nahm, W. (Bonn Univ. (Germany, F.R.). Physikalisches Inst.). Dec 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751732.

Open string models are classified using modular invariance. No good candidates for new models are found, though the existence of an E_8 invariant model in Rsup(17,1), a similar one in Rsup(5,1) and of a supersymmetric model in Rsup(2,1) cannot be excluded by this technique. An intriguing relation between the left moving and right moving sectors of the heterotic string emerges. (orig.).

33045 (CBPF-NF—058/85) Scheme to unify gravity and electro-weak interactions. Novello, M.; Heintzmann, H. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro; Koeln Univ. (Germany, F.R.)). 1985. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701921.

The theory of electro-weak interactions and Jordan's description of Einstein's Theory of gravity are unified in a unique scheme. A short-range counterpart of gravity, involving massive tensor bosons of masses 365 GeV and 520,3 GeV, is obtained within the new scheme.

33046 (CONF-8603115—3) Are the Dirac strings harmless. Lipkin, H.J.; Peshkin, M. (Argonne National Lab., IL (USA); Weizmann Inst. of Science, Rehovoth (Israel)). 1986. Contract W-31-109-ENG-38. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010530.

From Symmetries in science II; Carbondale, IL, USA (24 Mar 1986).

The interaction of a magnetic charge with an external magnetic field due to electric currents is explored by means of a simple soluble model which includes the variables of the source of the magnetic field. In this model the Hamiltonian exists, the energy is conserved and the equations of motion are correct. However, in the limit where the current is externally fixed, paradoxes arise which appear to have serious implications for local theories based on Maxwell's fields or the vector potentials. Those paradoxes can be avoided by introducing Dirac strings, but then the strings appear not to be physically harmless. They imply the existence of a topological winding number variable which would not be present for a monopole without a Dirac string. 5 refs. (WRF)

33047 (DESY—85-135) Algorithm for high order strong coupling expansions: The mass gap in 3d pure Z_2 lattice gauge theory. Decker, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Bern Univ. (Switzerland). Inst. fuer Theoretische Physik; Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Dec 1985. 47p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751745.

An efficient description of all clusters contributing to the strong coupling expansion of the mass gap in three-dimensional pure Z_2 lattice gauge theory is presented. This description is correct to all orders in the strong coupling expansion and is chosen in such a way that it remains valid in four dimensions for gauge group Z_2. Relying on this description an algorithm has been constructed which generates and processes all the contributing graphs to the exact strong coupling expansion of the mass gap in the three-dimensional model in a fully automatic fashion. A major component of this algorithm can also be used to generate exact strong coupling expansions for the free energy logZ. The algorithm is correct to any order; thus the order of these expansions is only limited by the available computing power. The presentation of the algorithm is such that it can serve as a guide-line for the construction of a generalized one which would also generate exact strong coupling expansions for the masses of low-lying excited states of four-dimensional pure Yang-Mills theories. (orig.).

33048 (DESY—85-141) Updating fermions with the Lanczos method. Barbour, I.M.; Behilil, N.E.; Gibbs, P.E.; Rafiq, M.; Moriarty, K.J.M.; Schierholz, G. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Glasgow Univ. (UK). Dept. of Natural Philosophy). Dec 1985. 17p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751740.

The Lanczos method is proposed for the Monte Carlo simulation of the QCD (lattice) vacuum including dynamical fermion loops. It appears that an exact fermion update is feasible on medium sized lattices with today's vector processors. (orig.).

33049 (DESY—85-144) Volume dependence of the energy spectrum in massive quantum field theories. Pt. 1. Stable particle states. Luescher, M. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)). Dec 1985. 62p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751735.

Due to polarization effects, the mass M of a stable particle in a quantum field theory enclosed in a large (space-like) box of size L and periodic boundary conditions in general differs from its infinite volume value m. As L increases, the finite size mass shift $\Delta m = M - m$ goes to zero exponentially with a rate, which depends on the particle considered and on the spectrum of light particles in the theory. This behaviour follows from an apparently universal asymptotic formula, already presented earlier, which relates Δm to certain forward elastic scattering amplitudes. A detailed proof of this basic relation is given here to all orders of perturbation theory in arbitrary massive quantum field theories. (orig.).

33050 (DESY—86-003) Line of second order phase transitions in the 4-dimensional Z_2 gauge theory with matter fields. Filk, T.; Marcu, M.; Fredenhagen, K. (Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.); Freiburg Univ. (Germany, F.R.). Fakultaet fuer Physik; Hamburg Univ. (Germany, F.R.). 2. Inst. fuer Theoretische Physik). Jan 1986. 13p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751738.

We present strong evidence that the phase transition between the free charge and the screening region of the 4-dimensional Z_2 lattice gauge theory with Z_2 matter fields is second order with mean field exponents. The quantity best suited for the analysis is an order parameter that tests the existence of charged states. We determine both its scaling and finite size scaling properties by performing a Monte-Carlo simulation. (orig.).

33051 (DOE/ER/40176—02) Particle theory and cosmology. Final report, July 16, 1984-March 31, 1986. Shafi, Q. (Delaware Univ., Newark (USA). Bartol Research Foundation). 17 Apr 1986. Contract FG02-84ER40176. 8p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010366.

The major thrust of the research reported was in the area of unified theories, in particular in grand unified and higher dimensional superstring theories. The problems that were addressed included: (1) the construction of realistic "low energy" (four dimensional) gauge models motivated from the ten-dimensional $E_8 \times E_8$ superstring theory; (2) a study of the phenomenological and cosmological implications of such models; (3) implementation of the inflationary scenario in the context of higher dimensional theories of gravity; and (4) clarification of the role of extended structures such as strings, monopoles and domain walls in a cosmological setting, particularly in an inflationary cosmology.

33052 (INIS-mf—9882) Probabilistic solutions of generalized birth and death equations and application to non-relativistic electrodynamics. Serva, M. (Forschungszentrum Bielefeld-Bochum-Stochastik (BiBoS), Bielefeld (Germany, F.R.)). 1986. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751757.

BiBoS. No. 129.

In this paper we give probabilistic solutions to the equations describing non-relativistic quantum electrodynamical systems. These solutions involve, besides the usual diffusion processes, also birth and death processes corresponding to the 'photons number' variables. We state some inequalities and in particular we establish

bounds to the ground state energy of systems composed by a non relativistic particle interacting with a field. The result is general and it is applied as an example to the polaron problem. (orig.).

33053 (INIS-SU—320, pp 239-251) **To the theory of particles with half-integer spin.** Bogush, A.A.; Kisel', V.V. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Some aspects of the theory of relativistic wave equations (RWE) applied for describing particles with half-integer spin are considered. The Gelfand-Yaglom modified basis, which facilitates, proceeding from physical requirements, finding RWE matrixes of the explicit form is suggested. A technique is developed for transition from RWE given in an explicit spinor form to their recording in a universal matrix form by introduction of generalized spinor Kronecker symbols. It is shown on this basis that in proper choice of a source set of irreducible representations of the Lorentz group the introduction of the electromagnetic interaction provides, to a minimal degree, the description of an additional interaction resulting from the presence of anomalous magnetic moment in a particle with 3/2 spin.

33054 (INIS-SU—320, pp 272-283) **Equations of relativistic string imbedding into 6-dimensional space-time and their general solution.** Barbashov, B.M.; Koshkarov, A.L.; Nesterenko, V.V. (Joint Inst. for Nuclear Research, Dubna, USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A set of 5 differential equations with 5 unknown functions describing a world surface of relativistic string in six-dimensional space-time has been derived. It is shown how a general solution of the given set can be obtained. This solution isn't written down completely due to its complicated form. The suggested method for deriving and solving equations can be used in the case of arbitrary space-time dimensionality.

33055 (INIS-SU—320, pp 28-37) **Quantum field theoretic properties of nonabelian phase factors.** Wieczorek, E. 1984. NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The paper is concerned with quantum field theoretical properies of nonabelian phase factors. The phase factors defining parallel transport in fiber bundle space are the necessary tool for the construction of gauge invariant nonlocal operators describing bound states in QCD. General structures of such operators are discussed and renormalization properties as well as relations between meson and baryon operators are obtained from a study of the underlying phase factors.

33056 (INIS-SU—320, pp 177-186) **Dual invariance and dyons in nonabelian gauge theories.** Tolkachev, E.A.; Tomil'chik, L.M. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A procedure of the Jang-Mills equations representatian in a dually-invariant form for the case of an arbitrary gauge group has been demonstrated. At that, as in electrodynamics, the principle of dual invariance of observables is formulated which, as it is shown, in the non-abelian case fixes unambiguously the charge dependence of the dyon mass.

33057 (INIS-SU—320, pp 187-199) **Gauge theory of particles with maximum 3/2 spin.** Kruglov, S.I.; Strazhev, V.I. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

It is shown that the theory of particles with variable spin permits one to develop a new approach different from existing ones to the construction and dynamic interpretation of the nonabelian gauge theory. A model of relativistic-covariant description of spinor fields where the gauge theory of particles with variable spin is renormalized unitary and asymptotically free, is suggested.

33058 (INIS-SU—320, pp 200-212) **Polarization symmetries of field theories.** Strazhev, V.I.; Shkol'nikov, P.L. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A theoretical group approach to the description of reactions with polarized particles is investigated. The approach permits to suggest a method for considering nopgeometric (polarization) symmetries of relativistic wave equations. It is concluded that the theoretical group approach to the description of the polarized particle reactions is a direct consequence of existence of polarization symmetries intrinsic to any wave equation describing a spin particle.

33059 (INIS-SU—320, pp 353-368) **Effective electrodynamics and gravity in a nonlinear spinor theory.** Durr, H.P. (Max-Planck-Institut fuer Physik und Astrophysik, Muenchen, Germany, F.R. Werner-Heisenberg-Inst. fuer Physik). 1984. NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

In contrast to the usual unified theories of elementary particles the present approach aims at a "radical unification" suggested by W. Heisenberg and based on the following three premises; a minimum number of constituent local fields with a minimum number of components, a maximum invariance group for the dynamics of these minimum fields, a sufficiently strong nonlinearity.

33060 (INIS-SU—320, pp 339-352) **Broken local commutativity axioms for universal Wightman field.** Krivsky, I.Yu.; Lomsadze, Yu.M.; Sabad, E.P.; Dobony, V.I. (Severo-Osetinskij Gosudarstvennyj Univ., Ordzhonikidze, USSR). 1984. NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A weak nuclearity of the space Usub(F) with arbitrary F is proven. The local properties of number-valued generalized functions U contains Usub(F)sup(n) are extended to the operator-valued generalized functions. The latter together with the weak nuclearity of the space Usub(F) give the possibility to formulate in a weak form both the local commutativity axiom and the broken local commutativity axiom keeping the psub(+)-invariance of the theory. Both axioms are formulated in terms of reductions of the field to the Borel sets.

33061 (INIS-SU—320, pp 262-271) **Dynamic equations for gauge-invariant wave functions.** Kapshaj, V.N.; Skachkov, N.B.; Solovtsov, I.L. (Gomel'skij Gosudarstvennyj Univ., Byelorussian SSR; Joint Inst. for Nuclear Research, Dubna, USSR; Gomel'skij Politekhnicheskij Inst., Byelorussian SSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The Bethe-Salpeter and quasipotential dynamic equations for wave functions of relative quark motion, have been derived. Wave functions are determined by the gauge invariant method. The V.A. Fock gauge condition is used in the construction. Despite the translational noninvariance of the gauge condition the standard separation of variables has been obtained and wave function doesn't contain gauge exponents.

33062 (INIS-SU—321, pp 337-342) **Realization of irreducible representations of the IU(1,3) group in generalized quark fields.** Khrushchev, V.V. 1984. (In Russian). NTIS (US Sales Only), PC A19/MF A01. File Number DE86780458. (CONF-8407160—Vol.1).

From 7. seminar on problems of high energy physics and quantum field theory; Protvino, USSR (1 Jul 1984).

A noncompact IU(1,3) group containing the Poincare P(1,3) group is considered to describe space-time properties of quarks. Properties of IU(1,3) group and its representations are given. The notion of the generalized quark field which in non-trivial cases necessarily contains fields with different spins is introduced.

33063 (INIS-SU—325, pp 39-42) **On the gauge-invariant variables for non-Abelian theories.** Skachkov, N.B.; Shevchenko, O.Yu.; Solovtsov, I.L. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Theoretical Physics; Gomel'skij Politekhnicheskij Inst., Byelorussian SSR). 1985. NTIS (US Sales Only), PC A04/MF A01. File Number DE86780459.

In JINR rapid communications. Collection.

Gauge invariant field variables are proposed for the case of non-Abelian field theories. The relation of these variables with the gauge-invariant strength tensor is found. It is shown that the Lorentz gauge condition formulated in terms of Mandelstam's contour derivatives takes place for new field variables and it serves as a secondary constraint according to Dirac's definition.

33064 (INP—1178/PH) **Gluonic Regge singularities and anomalous dimensions in QCD.** Jaroszewicz, T. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701959.

The Regge calculus results on the perturbative Pomeron are applied to deep inelastic scattering. Explicit expressions are given for the anomalous dimensions γsub(GGG)sup(n) and γsub(GF)sup(n) at n approx.= 1 to the lowest order in α and all orders in α/(n-1).

33065 (ITEP—8(1985)) **Decay of false vacuum in (1+1) dimensions.** Voloshin, M.B. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 21p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701922.

The decay rate of a false vacuum in (1+1) dimensions is expressed by a universal closed formula, which contains only two parameters: the mass of soluiton and the difference of energy density of the initial and the final states. The relative magnitude of corrections to the formula vanishes in the limit of vanishing energy difference. The formula is derived by the effective action technique and applicability of the Feynman perturbation theory is not assumed.

33066 (ITEP—31(1985)) **Supersymmetric instanton calculus. Gauge theories with matter.** Novikov, V.A.; Shifman, M.A.; Vainshtein, A.I.; Zakharov, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1985. 47p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701926.

Correlation functions of the type $(W^2(x), S^2(0))$ where S is the chiral matter superfield (in the one-flavor model) are discussed within the framework of gauge SUSY theories. SUSY implies that these correlation functions do not depend on coordinates and vanish identically in perturbation theory. A technique is developed for the systematic calculation of instanton effects. It is shown that even in the limit $x \to 0$ the correlation functions at hand are not saturated by small-size instantons with radius rho approximately x; a contribution of the same order of magnitude comes from the instantons of characteristic size pro approximately 1/V (V is the vacuum expectation value of the scalar field, and the attention is paid to the models with $V >> \Lambda$ where Λ is the scale parameter fixing the running gauge coupling constant). If $V > \Lambda$ both types of instantons can be consistently taken into account. The computational formalism proposed is explicitly supersymmetric and uses the language of instanton-associated superfields.

33067 (ITEP—167(1984)) **Witten index calculation in supersymmetric gauge theory.** Smilga, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 19p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701925.

Direct calculation of the Witten index Isub(W) in the SU(2) SUSY Yang-Mills theiory is performed using the periodic boundary conditions. Our result is Isub(W)=1 which disagrees with the Witten's result: Isub(W)=N for the SU(N) gauge group. The principle physical conclusion of SUSY unbreaking in this theory remains intact.

33068 (JINR—E-2-85-203) **Gauge-invariant variables and infrared confinement in QCD.** Pervushin, V.N.; Azimov, R.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1985. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701962.

Submitted to the journal Theor. Math. Phys. .

The gauge-invariant approach to quantization of the non-Abelian theory in a finite-volume space-time is considered. In this theory the topological vacuum degeneration takes place, and this degeneration may be a physical cause of nonobservation of free colour particles.

33069 (JINR—R-2-84-603) **QCD asymmetry and measurement of structure functions of polarized hadron.** Efremov, A.V.; Teryaev, O.V. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701963.

Submitted to the journal Phys. Lett. .

Polarization phenomena are discussed in the framework of high energy physics. It is shown that in hard processes with a polarized particle the contributions proportional to two-index distribution functions (correlation densities of parton number) have imaginary parts even in a Born subprocess. They represent the source of large single asymmetries. Calculation of such asymmetry in the $\gamma P \to \gamma X$ process, which appears to be a good partonometer for correlation densities was conducted.

33070 (LA-UR—86-1116) **Monte Carlo Renormalization Group: a review.** Gupta, R. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 30p. (CONF-8511170—2). NTIS, PC A03/MF A01; GPO Dep. File Number DE86010161.

From Lattice gauge theory: a challenge in large scale computing conference; Wuppertal, F.R. Germany (5 Nov 1985).

The logic and the methods of Monte Carlo Renormalization Group (MCRG) are reviewed. A status report of results for 4-dimensional lattice gauge theories derived using MCRG is presented. Existing methods for calculating the improved action are reviewed and evaluated. The Gupta-Cordery improved MCRG method is described and compared with the standard one. 71 refs., 8 figs.

33071 (LA-UR—86-1306) **Strings and their compactification from the particle viewpoint.** Slansky, R. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 52p. (CONF-860287—1). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86010186.

From Utah State theoretical physics workshop; Logan, UT, USA (24 Feb 1986).

A series of four lectures is given which deals with the particle formulation of string theory. An introductory lecture is given on where the idea of strings comes from and what strings are. An introduction is given to simple Lie algebras and their representations. Compactified strings and the heterotic theories are discussed, showing how infinite-dimensional Kac-Moody affine algebras can be spectrum generating algebras in (open) string theories. The spectrum of excited states of the heterotic string is examined, and comments are made on representations of affine algebras. Some aspects are shown of the algebraic structure of compactified closed bosonic strings. (LEW)

33072 **(LA-UR—86-1333) Introduction to string field theory.** Lykken, J.; Raby, S. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 33p. (CONF-860287—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010189.

From Utah State theoretical physics workshop; Logan, UT, USA (24 Feb 1986).

An action is proposed for an interacting closed bosonic string. Our formalism relies heavily on ideas discussed by Witten for the open bosonic string. The gauge fixed quantum action for the fully interacting open bosonic string is obtained.

33073 **(LA-UR—86-1492) Introduction to string field theory. A pedestrian approach to the covariant formulation.** West, G.B. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 43p. (CONF-860150—2). NTIS, PC A03/MF A01; GPO Dep. File Number DE86010209.

From Winter condensed matter physics conference: frontiers in condensed matter X-ray physics; Aspen, CO, USA (19 Jan 1986).

A relatively elementary account is given of what a string field represents and what is involved in the construction of its covariant action. Emphasis is on drawing a correspondence with similar problems in ordinary field theory and, particularly, using the language and mathematics used in ordinary field theory. Only the free string is discussed. 17 refs., 3 figs. (LEW)

33074 **(RAL—85-088) Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study.** Teper, M. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 12p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701923.

The topological charge density in the non-Abelian SU(2) vacuum as a function of temperature is calculated. It is found that the topological susceptibility is strongly suppressed for temperatures above the deconfining (chiral) phase transition.

33075 **(RAL—85-089) Topological susceptibility in SU(2) lattice gauge theory: an exploratory study.** Teper, M. (Rutherford Appleton Lab., Chilton (UK)). Oct 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701924.

The local topological charge density of the SU(2) vacuum is measured, using an algorithm that has the correct continuum limit and is not contaminated by perturbative contributions or dislocations. The resulting susceptibility, xsub(t) approx. (130 MeV)^4, is smaller than that obtained by "geometric" methods and is suppressed at small physical lattice volumes. Various systematic biases are quantified: finite volume effects, reaching equilibrium and uniqueness of the topology. The author comments on the role of instantons and presents an inequality between xsub(t) and the gluon condensate. It is found that a significant fraction of the non-perturbative action resides in extended topological objects.

33076 **Superspace formulation of ten-dimensional N = 1 supergravity coupled to N = 1 super Yang-Mills theory.** Atick, J.J.; Dhar, A.; Ratra, B. (Institute of Theoretical Physics, Department of Physics, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 2824-2832(15 May 1986). Contract AC03-76SF00515.

We present an on-shell superspace formulation of ten-dimensional N = 1 supergravity coupled to N = 1 super Yang-Mills theory. The coupling is completely specified in superspace by the Bianchi identity $dH = c_1 trF^2$, where H is the gauge-invariant three-form field strength of supergravity and F is the two-form super Yang-Mills field strength. We also briefly discuss the theory that results from modifying this Bianchi identity by the addition of a piece proportional to the square of the super curvature two-form.

33077 **Dirac quantization in superspace.** Barcelos-Neto, J.; Das, A. (Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 2863-2869(15 May 1986). Contract AC02-76ER13065.

We extend the method of Dirac quantization to superspace. We study simple models like the supersymmetric quantum mechanics as well as the supersymmetric nonlinear σ model in 1+1 dimensions. Although in both these cases the matrix representing the Poisson brackets between the constraints is singular, we show, following the spirit of Dirac, that one can still define Dirac brackets and that the resulting quantization is consistent with those of the component fields.

33078 **Fermion—grand-unified-monopole systems as exactly solvable two-dimensional quantum-field-theory problems.** Craigie, N.S. (Brookhaven National Laboratory, Upton, New York 11973). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 2930-2943(15 May 1986). Contract AC02-76CH00016.

We develop a framework for treating the interaction of light fermions with an arbitrary spherically symmetric grand-unified-theory monopole, which takes into account all the quantum fields outside the core. By identifying an underlying minimally extended Kac-Moody algebra, we show that in many cases, if not all, these systems reduce to an exactly solvable two-dimensional quantum-field-theoretic problem, in which all the interesting correlation functions can in principle be explicitly computed.

33079 **SU(2) deconfinement temperature on a body-centered hypercubic lattice.** Celmaster, W.; Kovacs, E.; Green, F.; Gupta, R. (Lyman Laboratory of Physics, Harvard University, Cambridge, Massachusetts 02138). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 3022-3030(15 May 1986). Contract W-31-109-ENG-38.

We present a Monte Carlo analysis of the SU(2) finite-temperature deconfinement transition on a body-centered hypercubic lattice. The behavior of the transition temperature T/sub c/ as a function of the lattice coupling β appears to deviate from the perturbative prediction of asymptotic scaling.

33080 **Dimensional reduction near a phase transition.** Rohrlich, D. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973 and Institute for Theoretical Physics, State University of New York, Stony Brook, New York 11794). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 3031-3038(15 May 1986). Contract AC02-76CH00016.

The dimensional-reduction hypothesis is tested in theories with a first-order phase transition. Five-dimensional SU(2) lattice gauge theory has a confined phase which resembles the two-dimensional theory; across the phase transition this resemblance is lost and the string tension vanishes. A similar pattern is found for reduction from four-dimensional SO(3) to the two-dimensional SO(3) theory. An external random flux does not induce reduction where it is not spontaneously present.

33081 **Quenched massive Schwinger model in the infrared approximation.** Guerin, F.; Fried, H.M. (Laboratoire de Physique Theorique, Universite de Nice, Parc Valrose, 06034 Nice Cedex, France). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 3039-3054(15 May 1986). Contract AC02-76ER03130.

In the quenched, continuum version of the Schwinger model, a gauge-invariant summation over soft photons exchanged across a fermion loop is performed for the order parameter <psi-bar psi> and the correlation function <psi-bar psi(x) psi-bar psi(y)> with a fermion mass mnot =0 and photon momentum k<m. The limit m→0 leads to a finite, nonzero value for <psi-bar psi>; in the correlation function the leading terms, proportional to <psi-bar psi>^{2}, cancel between the two types of diagrams leaving free massless propagation.

33082 **Supersymmetry and zero-momentum modes.** Itoyama, H. (Fermi National Accelerator Laboratory, P.O. Box 500, Batavia, Illinois 60510). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 3060-3074(15 May 1986).

Massless super quantum electrodynamics (SQED) and massless U(N) SQCD are examined in the somewhat improved Born-Oppenheimer approximation. The leading asymptotic behaviors of the wave functionals are fully respected. Supersymmetry is shown to be unbroken in both cases. CP or R symmetry is spontaneously

broken. The Witten index in these theories is well defined despite the abnormal degeneracy, and the values agree with their massive counterparts. Clarification in connection with other approaches is made.

33083 **Tricritical ratio of length scales in D = 4 Abelian Higgs model.** Kleinert, H. (Department of Physics, University of California, San Diego, La Jolla, California 92093). *Physical Review Letters;* **56**: No. 14, 1441-1443(7 Apr 1986). Contract AS03-81ER40029.

We use the duality between the Abelian Higgs model and pure U(1) lattice gauge theory to estimate the ratio $\sqrt{2}\ \kappa$ equivalent λ/ξ of penetration depth and coherence length at the tricritical point to be $\sqrt{2}\ \kappa$ roughly-equal 0.93, thus placing the tricritical point slightly on the type-I side of the borderline between type-I and type-II superconductivity in four dimensions.

33084 **Chaos in radiative interactions.** Ackerhalt, J.R.; Galbraith, H.W.; Milonni, P.W. (Theoretical Division (T-12), Los Alamos National Laboratory, Los Alamos, NM). pp 97-166 of Quantum Electrodynamics and quantum optics. Barut, A.O. New York, NY; Plenum Press (1984). (CONF-8305249—).

From NATO advanced study institute on quantum electrodynamics and quantum optics; Boulder, CO, USA (27 May 1983).

Our purpose here is to indicate why chaotic dynamics may be of interest in the study of radiative interactions in quantum optics.

33085 **AXp or rXE? Minimal coupling and multipolar Hamiltonians in the quantum theory of radiation.** Haller, K. (Department of Physics, University of Connecticut, Storrs, CT). pp 373-391 of Quantum Electrodynamics and quantum optics. Barut, A.O. New York, NY; Plenum Press (1984). (CONF-8305249—).

From NATO advanced study institute on quantum electrodynamics and quantum optics; Boulder, CO, USA (27 May 1983).

The minimal coupling Hamiltonian is consistent with Maxwell's equations and with the Schroedinger equation. When A /sub lm/ is quantized, and the necessary constraints are properly implemented, the gauge-dependent parts of this Hamiltonian are manifestly unable to affect any of its dynamical consequences. It is the minimal coupling Hamiltonian, not the multipolar Hamiltonian, whose validity in time-evolution equations may be taken for granted. The multipolar Hamiltonian cannot be obtained from the minimal coupling Hamiltonian by making a gauge transformation. The multipolar Hamiltonian can be obtained from the minimal coupling Hamiltonian by a unitary transformation.

33086 **The spectrum in lattice gauge theories.** Berg, B. (Institut fur Theoretische Physik, Luruper Chaussee 149, Hamburg). pp 105-196 of Progress in gauge field theory. 't Hooft, G.; Jaffe, A.; Lehmann, H.; Mitter, P.K.; Singer, I.M.; Stora, R. New York, NY; Plenum Press (1984). (CONF-8309231—).

From NATO advanced study institute on progress in gauge field theory; Cargese, France (1 Sep 1983).

A critical status report on spectrum calculations for 4d SU(2) and SU(3) lattice gauge theories (without quarks) is given. Also some conceptual details are discussed.

33087 **Lattices, demons and the microcanonical ensemble.** Bhanot, G. (The Institute for Advanced Study, Princeton, NJ). pp 155-167 of Progress in gauge field theory. 't Hooft, G.; Jaffe, A.; Lehmann, H.; Mitter, P.K.; Singer, I.M.; Stora, R. New York, NY; Plenum Press (1984). (CONF-8309231—).

From NATO advanced study institute on progress in gauge field theory; Cargese, France (1 Sep 1983).

A method proposed recently for computer simulation of dynamical systems is investigated in detail for the Ising model.

33088 **Valon model for hadrons and their interactions.** Hwa, R.C. (Univ. of Oregon, Eugene, OR). pp 79-99 of Short-distance phenomena in nuclear physics. Vol. 104. Boal, D.H.; Woloshyn, R.M. New York, NY; Plenum Press (1983). (CONF-8208213—).

From Pacific summer institute of the Theoretical Physics Division of the Canadian Association of Physicist; Vancouver, BC, Canada (23 Aug 1982).

This chapter outlines how the hadron structure is determined in terms of the valons and how hadronic reactions can then be described in the valon framework. Shows how two aspects of the hadron, the bound-state and scattering properties, can be combined in a unified picture that can be applied to explaining many empirical facts that have been accumulated in the past 20 yrs. Examines the valon model, deep inelastic scattering, hadronization, low-P/sub T/ inclusive reactions, and problems in hadron physics (form factors, Regge behavior of elastic amplitudes, radiation length of fast quarks in nuclear matter, quark-gluon plasma in heavy ion collisions). Omits discussion of the subject of photon fragmentation as a result of deep inelastic probing. Suggests the establishment of a connection with triple Regge analysis.

33089 **Nuclear chromodynamics: Implications of QCD for nuclear physics.** Brodsky, S.J. (Stanford Univ., Stanford, CA). pp 141-217 of Short-distance phenomena in nuclear physics. Vol. 104. Boal, D.H.; Woloshyn, R.M. New York, NY; Plenum Press (1983). (CONF-8208213—).

From Pacific summer institute of the Theoretical Physics Division of the Canadian Association of Physicist; Vancouver, BC, Canada (23 Aug 1982).

This chapter discusses the synthesis of quantum chromodynamics (QCD) with nuclear physics (nuclear chromodynamics). Examines exclusive processes in QCD; applications to nuclear amplitudes; reduced nuclear amplitudes; QCD and the nucleon-nucleon interaction; nuclei as probes of particle physics dynamics; parity violation in hadronic or nuclear processes; the nucleus as a color filter; nuclear corrections to inclusive QCD reactions; propagation of quark and gluon jets in nuclear targets; nuclear shadowing; hadronic wave functions and their measurements in QCD; relativistic wave functions of composite systems; measures of hadronic wave functions; form factors of mesons; the meson distribution amplitude; general large momentum transfer exclusive processes; two-photon processes; the phenomenology of hadronic wave functions; QCD predictions for the deuteron form factor and the deuteron distribution amplitude; further applications of reduced nuclear amplitudes; and limitations of traditional nuclear physics. Suggests that QCD could be the theory of strong and nuclear interactions in the same sense that QED accounts for electrodynamic interactions. Finds that QCD solves many crucial problems (e.g., the meson and baryon spectra, quark statistics).

(Moskovskij Gosudarstvennyj Univ., USSR. Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

The relation between the behaviour of real and imaginary parts of a forward elastic scattering amplitude is investigated on the basis of analyticity and crossing symmetry. The possibility for the generalization of this equality also for symmetric amplitudes resulting from dispersion relations was considered. It is noted that the investigation performed is true for any function complying with the dispersion relation, for example, for the polarization operator.

33091 (INIS-SU—320, pp 144-153) **Practical analyticity of scattering amplitudes.** Vernov, Yu.S.; Chubarov, M.S. (Moskovskij Gosudarstvennyj Univ., USSR). 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

It is shown that the scattering amplitude analyticity in the whole E plane, excluding a real axis, can be actually used for all the processes of two-particle scattering and for random physical values of a transferred momentum. For this purpose a modified delay amplitude, modified leading amplitude and modified "physical" amplitude have been constructed.

33092 **Group theory approach to scattering. II. The Euclidean connection.** Alhassid, Y.; Guersey, F.; Iachello, F. (A. W. Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511). *Annals of Physics (New York);* **167**: No. 1, 181-200(Mar 1986). Contract AC02-76ER03074;AC02-76ER03075.

We show that the calculation of the S-matrix associated with a class of solvable potentials with SU(1,1) dynamic symmetry can be formulated in purely algebraic terms. This formulation makes use of the Euclidean group in two dimensions, E(2), and is amenable to generalization to a larger number of dimensions.

33093 **(BARC—1282) Report of the Nuclear Physics Division [for the period] January 1, 1984 to December 31, 1984.** Dasannacharya, B.A.; Bansal, M.L.; Jain, A.K. (Bhabha Atomic Research Centre, Bombay (India)). 1985. 123p. NTIS (US Sales Only), PC A06/MF A01. File Number DE86701985.

The Research and Development (R and D) activities of the Nuclear Physics Division of the Bhabha Atomic Research Centre, Bombay, during 1984 are described in the form of individual summaries grouped under the broad headings: (1) nuclear physics, (2) solid state physics, and (3) techniques and instrumentation. The research programmes in the field of nuclear physics are based on the facilities: the 5.5 MV Van-de-Graaff accelerator and the CIRUS reactor, both at Bombay, and the variable energy cyclotron at Calcutta. Solid state physics studies are carried out using neutron diffraction and neutron scattering, light scattering, Moessbauer spectroscopy, Compton profile spectroscopy, and Auger electron spectroscopy. Studies in the field of liquid crystals are also carried out. A A-T window spectrometer was fabricated and installed at the spallation Neutron Source of the Rutherford Appleton Laboratory, U.K. The work of setting up of a 14 UD pelletron accelerator in collaboration with the Tata Institute of Fundamental Research (TIFR), Bombay is in advanced stage at TIFR. Instrumentation for DHRUVA reactor which incorporates specially designed beam tubes for neutron scattering work has been developed. Work on the development of superconducting materials and magnets is continuing. A list of papers published in journals and papers presented at conferences, symposia etc. during the year is given.

33094 **(BNL-NCS—37888) Example of nuclear data center services for geophysics applications.** Rose, P.; Burrows, T.; Tuli, J. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 8p. (CONF-8604169—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009912.

From International consultants meeting on geophysics; Vienna, Austria (7 Apr 1986).

A bibliographic survey of the available experimental data on neutron induced gamma-ray production has been made. Use was made of Data Center on-line search and retrieval capabilities. CINDA was searched for prompt gamma-ray production data covering a large incident neutron energy range, and where possible, EXFOR was used to scan the data and select representative works. From the survey it appears that many measurements will have to be supplemented by theoretical calculations. 13 refs., 2 tabs.

33095 **(CONF-860610—4-Rev.1) Neutron-photon multigroup cross sections for neutron energies ≦400 MeV. Revision 1 .** Alsmiller, R.G. Jr.; Barnes, J.M.; Drischler, J.D. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 7p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86005083.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

For a variety of applications, e.g., accelerator shielding design, neutrons in radiotherapy, radiation damage studies, etc., it is necessary to carry out transport calculations involving medium-energy (≧20 MeV) neutrons. A previous paper described neutron-photon multigroup cross sections in the ANISN format for neutrons from thermal to 400 MeV. In the present paper the cross-section data presented previously have been revised to make them agree with available experimental data. 7 refs., 1 fig.

33097 (LBL—19100, pp 4-8) **Research by accelerator users: highlights.** May 1985. NTIS, PC A05/MF A01. File Number DE85013314.

In Accelerator and Fusion Research Division: 1984 summary of activities.

Broadly, nuclear physics research at the Bevalac centers around the use of relativistic heavy-ion beams to study nuclear collisions that greatly increase the density and pressure of the nuclear matter. In one example of such research, the first clear evidence for the formation of compressed nuclear matter during heavy-ion collisions emerged from a collaboration between LBL and the Gesellschaft fuer Schwerionenforschung (GSI). In the reaction ^{93}Nb + ^{93}Nb, the particles coming from the breakup of the niobium nuclei did not scatter in random directions, but instead exhibited a collective flow that can only be explained by nuclear compression. Dense matter of this kind has been hypothesized to exist inside neutron stars, and it plays an important role in theories of the evolution of the universe. Other work focused on the high temperatures (about 100 MeV) reached in these relativistic heavy-ion collisions. In another collaboration, this one between the Institute for Nuclear Study (INS) in Tokyo and LBL, light isotope beams were produced, separated, magnetically focused, and transported to the Heavy Ion Superconducting Spectrometer. At the SuperHILAC, about half of the beam time was devoted to studies of nuclear reactions, the rest of the time going to research on nuclear structure, atomic physics, and exotic nuclei. A highlight of 1984 was the study of reverse kinematics, observed when a heavy beam impinges on a light target. Simultaneously with these programs, the biology and medicine program continued its use of heavy-ion beams in basic studies of biophysics and radiobiology and in a series of cancer-therapy trials.

33098 **(UCRL—15791) [Scattering in nuclear physics]. Final report.** Petrovich, F.L. (Florida State Univ., Tallahassee (USA)). 1986. Contract W-7405-ENG-48. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009688.

A brief summary of research activities completed by the author for the period August 1, 1985 through January 31, 1986 are presented. These activities include lectures, papers, workshops, research studies in various aspects of nuclear reactions including low energy proton and neutron reactions, a proposed medium energy neutron scattering facility, nuclear and pion scattering, nuclear potentials, and quark effects and relativistic dynamics. From European symposium on few-body physics - mesons and light nuclei III; Bechyne Castle, Czechoslovakia (27 May 1985).

One and two bodies nuclear currents have been explored by inclusive (ee') and exlusive (ee'p) electron scattering on ^{2}D and ^{3}He. Recoil momenta from 0 to 500 MeV/c have been measured for two or three-body break-up and compared with calculations including final state interaction and meson exchange currents. Transverse and longitudinal response functions are presented in ^{3}He between 0.1 to 0.3 $(GeV/c)^{2}$ in the quasi elastic region. 12 refs.

33101 (DOE/ER/40048—102-L4, pp 52-53) **Inclusive scattering of pions from very light nuclei at 100 MeV.** Amann, J.F.; Burger, W.; Doss, K.G.R.; Dowell, D.H.; Halpern, I.; Khandaker, H.A.; Leach, D.D.; Murakami, T.; Storm, D.W.; Tieger, D.R. (Los Alamos National Lab., NM). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

Recently the authors performed an experiment on the inclusive scattering of pions from very light nuclei at 100 MeV. The experiment was motivated by their earlier finding that although inclusive pion scattering from elements heavier than ^{12}C appears to be mostly due to quasi-elastic scattering from nucleons, there are some features that cannot be accounted for in this way. The authors decided to study these features in light elements to avoid multiple scattering effects. The present measurements were carried out using the QQD spectrometer in the M11 channel at TRIUMP (Experiment 224). Data were collected for π^{+} on ^{2}H, π^{-} on ^{3}He, and $_{4}$He at 60°, 100° and 125°. For normalization and diagnostic purposes some data were also collected for ^{1}H, ^{14}N, ^{12}C, and ^{208}Pb.

33102 **(ITEF—177(1984)) Inclusive production of protons with energies of 80-240 MeV in the pHe^{4} - and π^{-} He^{4} interactions.** Alpatov, V.G.; Bayukov, Yu.D.; Vlasov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701990.

The purpose of the present experiment has been: 1) obtaining the data on spectra of protons escaping from He^{4} nucleus induced by protons and π^{-}-mesons in the course of the same experiment in which the data for Li^{6}, Li^{7}, Be, B, C, F, Ni, Cu, Zn, Sn and In targets have been previously obtained; 2) elucidation of the contradictory situation with the relation of cumulative proton yields from He^{4} and Li^{6} nuclei. The results of measuring cross sections of inclusive production of protons with 80-240 MeV under the angles of 30 deg, 60 deg, 88 deg and 119 deg in the p^{4}He interactions at 7.5 GeV/c and π^{-}^{4}He interactions at 5 GeV/c are presented. The comparison of obtained data with the results of measuring cross sections of production of protons on other nuclei is performed.

33103 **Faddeev calculations of the 2π-3N force contribution to the ^{3}H binding energy.** Chen, C.R.; Payne, G.L.; Friar, J.L.; Gibson, B.F. (Department of Physics and Astronomy, University of Iowa, Iowa City, Iowa 52242). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1740-1752(May 1986).

The configuration-space Faddeev equations are solved for Hamiltonians that include the Tucson-Melbourne, Brazil, and Urbana two-pion-exchange three-nucleon force models. Convergence in terms of the number of three-body partial waves is demonstrated. First-order perturbation theory results are shown to be inadequate. All three models produce approximately 1.5 MeV additional binding, which overbinds the triton, when the standard value of the πN form factor cutoff is used.

33104 **(CEA-N—2453) Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei.** Janouin, S. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Oct 1985. 169p. (In French). NTIS (US Sales Only), PC A08/MF A01. File Number DE86751815.

This thesis reports on the first measurements of angular distributions for elastic and inelastic scattering of antiprotons from nuclei, which have been performed, using the beam delivered by LEAR and the spectrometer SPES II, over a wide angular range and with good precision. Angular distributions for elastic scattering of 50 MeV antiprotons from ^{12}C, ^{40}Ca, ^{208}Pb and 180 MeV antiprotons from ^{12}C, ^{16}O, ^{18}O, ^{40}Ca, ^{208}Pb have been measured. Data on the inelastic 4.4 MeV and 9.6 MeV excited states of ^{12}C and 1.98 MeV excited state of ^{18}O have also been collected. The diffractive angular distributions are first analysed in terms of a fuzzy black disk model, which confirms that the antiproton is strongly absorbed (annihilation) by the nuclei. Optical model analysis, with Woods-Saxon geometry, shows that the real potential is attractive and shallow. The potentials are only determined at the nuclear surface, around the strong absorption radius, where /W(R)/ > 2 / V(R)/. Main characteristics of the antip-nucleus elastic scattering cross sections are well described within microscopic models using the free elementary antiN N interaction, like KMT which have no free parameters. Possibility for test of spin-isospin dependence of the elementary amplitude antiN-N from the measurement of unnatural parity states is also studied.

33105 (DOE/ER/40048—102-L4, pp 1) **Alpha-particle cross section relevant to gamma-ray astronomy.** Bodansky, D.; Dyer, P.; Leach, D.D.; Norman, E.B.; Seamster, A.G. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The analysis of gamma-ray production cross sections for alpha-particle induced reactions on light nuclei (^{12}C, ^{14}N, and ^{16}O) is nearing completion. The cross section for production of the 4.44-MeV line in (α,α') reactions on ^{12}C is found to exceed 200 mb for incident energies from E/sub α/ = 10 MeV to the maximum energy studied, E/sub α/ = 27 MeV, and exceeds 400 mb at some points. These cross sections are somewhat greater than those for producing the 4.44-MeV line in (p,p') reactions on ^{12}C. Similarly the cross sections for the production of the 1.63-MeV and 2.31-MeV lines in (α,α') reactions on ^{14}N slightly exceed those for the corresponding (p,p') lines. The analysis of the cross sections for alpha-particle induced reactions on heavier abundant nuclei (^{20}Ne, ^{24}Mg, ^{27}Al, ^{28}Si, and ^{56}Fe) has been completed.

33106 (DOE/ER/40048—102-L4, pp 7) **Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states.** Behr, J.A.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have now used the schematic model to calculate nucleon decay branching ratios to various excited states following photoexcitation of the GDR; the effects of Coulomb plus centrifugal barrier penetration have now been explicitly included. Branching ratios calculated for ground-state ^{16}O and ^{28}Si (γ,nucleon) reactions have been compared with experiment. For ^{16}O, the relative branching ratios to p/sub 3/2/ and p/1/2 neutron and proton hole states are calculated correctly within experimental error. In this case, carrier penetration effects are essential; if they are not included, the model predicts far too much p/sub 3/2/ strength. For ^{28}Si, calculated decays to eight proton hole states produce fair agreement with experiment. However, the dominant branch, proton decay to the ground state of ^{27}Al, is calculated to be a factor of two too strong, independent of the details of the calculation. This over-predicted p/sub o/ strength appears to be a clear indication of the need for a statistical component of the ground-state GDR in ^{28}Si with a relative strength (spreading width)/(total width) of about 50%.

33107 (DOE/ER/40048—102-L4, pp 8-9) **Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei.** Dowell, D.H.; Feldman, G.; Harakeh, M.N.; Gossett, C.A.; Loveman, R.; Murakami, T.; Osborne, J.L.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

In light self-conjugate nuclei the study of statistical excited-state GDR decays can provide a sensitive measure of compound nuclear isospin purity at moderate excitation energies. The authors made two different types of measurements of these effects in the A = 24 - 28 mass region. The first is $^{12}C + ^{16}O$ at excitation energies similar to those studied in $^{25}Mg + ^{3}He$. Here, one directly sees the effect of isospin purity in the strong inhibition of high energy γ-ray production in $^{12}C + ^{16}O$ (T=O) entrance channel) relative to $^{25}Mg + ^{3}He$ (T=O + T=1). The spectrum shape and a preliminary analysis for 40 MeV $^{12}C + ^{16}O$ are shown. For E/sub γ/ > 13 MeV the yield comes mainly from the initial compound nucleus and is much less than the mixed isospin limit. However, the measured yield is somewhat larger than the pure-isospin calculation, requiring about 3% isospin mixing in the initial compound nucleus. This is about five times less than other experiments have indicated for lower excitation energies. The second type of measurement consists of comparing $^{12}C + ^{12}C$, $^{12}C + ^{13}C$ and $^{13}C + ^{13}C$ reaction yields. The latter two reactions lead to N is not equal to Z compound nuclei and hence have normal γ-ray yields, whereas high energy γ-ray yields from $^{12}C + ^{12}C$ are again observed to be strongly inhibited.

33108 (DOE/ER/40048—102-L4, pp 22) **Nuclear rainbow scattering with carbon isotopes.** Bohlen, H.G.; Cramer, J.G.; Gebauer, B.; Michachaka, H.; von Oertzen, W.; Xueshi, C. (Hahn-Meitner-Institute fuer Kernforschung, Berlin, West Germany). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The phenomenon of nuclear rainbow scattering or far-side scattering observed in elastic scattering with projectiles of Z = 1 - 3 has provided valuable insights into interaction potentials and light ion reaction mechanisms. Until recently there had been no evidence that projectiles with Z > 3 could exhibit such nuclear-rainbow/far-side scattering effects. However, within the past two years groups at CERN and at the Hahn-Meitner Institute have observed the clear signature of this phenomenon in $^{12}C + ^{12}C$ scattering at laboratory bombarding energies above about 20 MeV/nucleon. It is therefore of considerable interest to determine if heavier systems can also show nuclear rainbow scattering effects. Using the VICKSI accelerator system at the Hahn-Meitner Institute the authors have investigated this question for the systems $^{12}C + ^{16}O$, $^{13}C + ^{12}C$, and $^{13}C + ^{14}C$ with a ^{13}C beam at 22 and 25 MeV/nucleon and ^{13}C beam at 18 and 22 MeV/nucleon. Preliminary analysis indicates that the ^{13}C + /sup 12-14/C systems show clear nuclear-rainbow/farside effects while the $^{12}C + ^{16}O$ system shows little evidence of this phenomenon.

33109 (DOE/ER/40048—102-L4, pp 23-24) **Penetrability of the centrifugal barrier and the spin distribution of the compound nucleus.** Abriola, D.; DeYoung, P.; Gil, S.; Lazzarini, A.; Lock, D.K.; McGrath, R.; Ray, A.; Vandenbosch, R. (State Univ. of New York, Stony Brook). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have continued their studies of the penetrability of the centrifugal barrier and its effect on the spin distribution of the compound nucleus in heavy ion collisions. This year they have performed a series of experiments to measure the total fusion cross section and the first moment of the gamma ray multiplicity M/sub γ/ utilizing an experimental technique previously described. The authors used the systems: α, ^{12}C, ^{16}O and ^{28}Si on ^{154}Sm.

33110 (DOE/ER/40048—102-L4, pp 27) **New scheme for the calibration of sub-Coulomb heavy ion proton transfer reactions.** Davis, K.J.; Lazzarini, A.; Murakami, T. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

A triad of proton transfer reactions can be used to isolate the product of a spectroscopic factor and the square of the radial wave function for the exchanged proton in the initial and final configurations. Such a set of reactions was described in last year's Annual Report. Only one of those reactions proved to be feasible, so a new triad is being investigated: $^{42}Ca + ^{15}N \rightarrow ^{41}K + ^{16}O$, $^{40}Ca + ^{27}Al \rightarrow ^{41}K + ^{28}Si$ and $^{27}Al + ^{16}O \rightarrow ^{28}Si + ^{15}N$. In each case the authors are planning to use the heavier nucleus as the projectile. They have performed beam development work with the sputter source and have achieved an 80 nA beam of ^{27}Al 6+ after energy analysis and a 52 nA beam of ^{40}Ca 8+. The authors expect similar results when isotopically enriched ^{42}Ca is used in the source.

33111 (DOE/ER/40048—102-L4, pp 31-32) **Reactions of ^{24}Mg with ^{16}O.** Gil, S.; Khandaker, M.A.; Leach, D.D.; Lock, D.K.; Ray, A.; Vandenbosch, R. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have recently performed an experiment to measure the angular distribution of the oxygen and carbon particles from the $^{16}O(^{24}Mg,^{16}O)^{24}Mg$ and $^{16}O(^{24}Mg,^{12}C)^{28}Si$ reactions at E/sub Lab/ = 79.5 MeV at back angles. The motivation for this measurement is to find out whether the large inelastic cross sections observed at backward angles in the carbon and oxygen channels in the $^{28}Si + ^{12}C$ reaction are due to a compound nuclear process. The authors form a ^{40}Ca nucleus by the $^{24}Mg + ^{16}O$ reaction at the same excitation energy and approximately the same angular momentum (within 5%) as for the $^{28}Si + ^{12}C$ reaction and compare the relative intensities of the carbon and oxygen yields. If they see an entrance-channel effect, then the back-angle yields cannot be attributed to a compound nuclear process.

33112 (DOE/ER/40048—102-L4, pp 36-38) **Theory of the ^{14}N parity mixing measurement.** Adelberger, E.G.; Brown, B.A.; Hoodbhoy, P. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The general principles of our experiment to measure the $\Delta I = 0$ parity mixing between the I = 1 O^+ and O^- levels at E/sub X/ = 8.618 and 8.79 MeV in ^{14}N were given in last year's Annual Report. A paper, to appear in Phys. Rev. C, develops the formalism of longitudinal analyzing power (A/sub L/) measurements over parity mixed resonances and applies this to the example of probing the parity mixing in ^{14}N by detecting A/sub L/ over the narrow O^+ resonance. The formalism utilizes the single-level approximation to Bloch's formulation of reaction theory in order to account for the strong (parity-conserving) reaction amplitudes and is restricted to parity nonconservation associated with the closeness of the two opposite parity resonances. An example of the parity conserving

calculation is shown where we compare our calculation to existing unpolarized $^{13}C(p,p)$ data. In order to determine the widths and separation of the O^+ and O^- resonances the authors studied the $^{13}C(p,\gamma/sub\ o/)$ reaction at THETA/sub lab/ = 90°. Results are shown.

33113 (DOE/ER/40048—102-L4, pp 59-60) **Lifetime and magnetic moments of states of ^{16}N by the recoil-into-vacuum method.** Hanna, S.S.; Neyer, B.T.; Thornton, J.L. (Stanford Univ., CA). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

Lifetime and moment measurements were made on the 297 keV, 3_1^- state in ^{16}N and lifetime measurements were made on the 397 keV, 1^{1-} state in ^{16}N, with the reaction $d(^{15}N,p)^{16}N$. Measurements detecting the outgoing coincidence proton were made at a beam energy of 34 MeV, while singles measurements were performed at 20 MeV. The preliminary results obtained are shown.

33114 (INP—1191/PL) **Two-step direct processes in the $^{12}C+^9Be$ system.** Kamys, B. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 64p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86701991.

Angular and energy dependence of the cross-sections were studied for two-step direct processes in the $^{12}C+^9Be$ system. The theoretical analysis was performed by means of the exact finite range coupled-reaction-channels (CRC) calculations including the compound nucleus background. A consistent analysis of the elastic scattering, inelastic scattering and (^9Be,^9Be) reactions enabled to obtain absolute (parameter free) values of the two-step cross-sections. It was shown that two-step processes are responsible for non-negligible component of the cross-sections and their neglect may in many cases lead to qualitative and quantitative disagreement of the theory and experimental data.

33115 (JINR—E-4-85-311) **Spin-dipole excitations of ^6Li in charged pion photoproduction.** Eramzhyan, R.A.; Kaipov, T.D.; Kamalov, S.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Kazakhskij Gosudarstvennyj Univ., Alma-Ata (USSR)). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701982.

Submitted to the journal Z. fur Phys. .

In the framework of bound shell model the photoproduction cross sections of charged pions on ^6Li are calculated when spin-isospin dipole resonance is excited. It is shown that the transition strength concentrates in several energy regions. Such a gross-structure of the excitation spectrum is governed by the configurational splitting of the resonance. The excitation spectrum in $^6Li(\gamma,\pi)$-reaction is compared with the $^6Li(\pi,\gamma)$, (e, e') and (n, p) reaction spectra where spin-isospin transitions are also dominating.

(Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics; Moskovskij Gosudarstvennyj Univ. (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). 1985. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701973.

Submitted to the journal J. Phys. .

The structure of different excited states of the ^{12}C nucleus has been investigated in the framework of the hyperspherical function method. The spectrum of excited 0^+- and 2^+-states up to E * = 22 MeV, the corresponding density distributions, rms-radii and reduced probability B(E2)-values have been calculated. Then, folding-potentials have been constructed and used for the description of elastic and inelastic scattering of light ions by ^{12}C.

33117 **P-C analyzing power between 100 and 750 MeV.** McNaughton, M.W.; Bonner, B.E.; Ohnuma, H.; Van Dijk, O.B.; Sun Tsuhsun; Hollas, C.L.; Cremans, D.J.; McNaughton, K.H.; Riley, P.J.; Rodebaugh, R.F. (Los Alamos National Lab., NM, USA; Texas Univ., Austin, USA; Rice Univ., Houston, TX, USA). *Nuclear Instruments and Methods in Physics Research, Section A: Accelerators, Spectrometers, Detectors, and Associated Equipment;* **241**: No. 2/3, 435-440(1 Dec 1985).

The inclusive p-C analyzing power has been measured for laboratory scattering angles between 3° and 19° for energies between 80 and 584 MeV. The experiment was performed at LAMPF using a large solid angle polarimeter. These data have been incorporated into the existing data base to obtain a new energy dependent p-C analyzing power fit for the energy range 100-750 MeV.

33118 **Neutron scattering cross sections from ^{14}N and ^9Be at 11, 14, and 17 MeV.** Templon, J.A.; Dave, J.H.; Gould, C.R.; Singkarat, S. (North Carolina State University, Raleigh, NC). *Nuclear Science and Engineering;* **91**: No. 4, 451-457(Dec 1985).

Neutron scattering cross sections were measured for ^{14}N and ^9Be at incident neutron energies of 11, 14, and 17 MeV using time-of-flight methods. Angular distributions for ^{14}N and ^9Be elastic scattering and ^9Be inelastic scattering to the 2.429-MeV excited state were obtained betwee 20 and 160 deg in 5-deg increments. The data were corrected for finite geometry effects using a Monte Carlo simulation code. Lengendre polynomial coefficients deduced by fitting the experimental data are tabulated. The results of a spherical optical model analysis for the ^{14}N data are reported. Coulomb correction terms are obtained from a comparison of neutron and proton elastic scattering data for ^{14}N.

6514 Nuclear Properties And Reactions, A=20-38, Theoretical

33119 (CEA-N—2447) **Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asysmetric entrance channels.** Bozek, E.; Castro Rizzo, D. de; Cavallaro, S.; Delaunay, B.; Delaunay, J.; Dumont, H.; d'Onofrio, A.; Saint-Laurent, M.G.; Sperduto, L.; Terrasi, F. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Sep 1985. 54p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE86751813.

Excitation function for the residue of the systems ^{12}C + ^{46}Ti - > ^{58}Ni, ^{28}Si + ^{30}Si → ^{58}Ni, ^{12}C + ^{48}Ti → ^{60}Ni, ^{30}Si + ^{30}Si → ^{60}Ni, ^{12}C + ^{50}Ti → ^{62}Ni, ^{18}O + ^{44}Ca → ^{62}Ni were measured at energies approximately 0.7 to 1.6 times the Coulomb barrier. These experimental values were compared with the predictions of the fusion-evaporation.

33120 (DOE/ER/40048—102-L4, pp 5-6) **β^+ decays of ^{34}Ar, ^{34}Cl and ^{38}K.** Adelberger, E.G.; Osborne, J.L.; Swanson, H.E.; Zeps, V.J. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have performed a series of preliminary experiments using the gas-transfer system to investigate the feasibility of measuring weak branches in the β^+ decays of ^{34}Ar, ^{34}Cl and ^{38}K. As in previous experiments, the activities of interest were produced by bombarding a gas target and transporting the gas to a well-shielded counting station where the decay γ rays were counted by a large GeLi detector. A 2.5-cm lead hardener was placed in front of the detector to reduce the counting rate of annihilation radiation relative to the more energetic beta-delayed γ rays. The 0.845s ^{34}Ar activity was produced by the $^{32}S(^3He,n)$ reaction on H_2S gas at a bombarding energy of 14.5 MeV. At the same time, the 1.526s positron decay of the daughter nucleus, ^{34}Cl was also investigated. The 3^+ ground state of ^{38}K and its O^+ isomer, the analogue of the ground state of ^{38}Ar, were produced by the reaction $^{35}Cl(\alpha,n)$ at a bombarding energy of 11 MeV, using Freon-11 ($CFCl_3$) as the target gas.

33121 (DOE/ER/40048—102-L4, pp 26-27) **Search for high spin states in ^{32}S.** Davis, K.J.; Gil, S.; Hindi, M.; Lazzarini, A.; Lesko, K.T.; Lock, D.K.; Murakami, T.; Ray, A.; Vandenbosch, R. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

Continuing their effort to locate the higher members of the yrast line in ^{32}S, this year the authors have performed a series of experiments in order to locate the particle unbound members of the band by using a particle-particle coincidence method. Summarizing the results of studies of ^{32}S, through a particle-gamma coincidence experiment reported previously they have been able to detect the gamma-decay properties of four levels at E/sub X/ = 6.763, 7.46, 8.3 and 8.5 MeV. The E/sub X/ = 6.763 MeV level was assigned J/sup π/ = 5$^-$, E/sub X/ = 7.46 MeV J/sup π/ = (1$^-$,2$^+$), E/sub X/ = 8.3 MeV J/sup π/ = (6$^+$) and E/sub X/ = 8.508 MeV J/sup π/ = (3$^-$,2$^+$). Two α-unbound levels at E/sub Z/ = 11.0(+/-0.4) MeV and 12.5(+/-0.4) MeV are strongly populated with the reaction ^{28}Si(^{16}O, ^{12}C)^{32}S at E/sub lab/ ~ 70 MeV, with an appreciable branching ratio for decay to ^{28}Si(g.s.). The experiment did not yield a definite spin assignment for them, but suggests overlapping levels or low spin values (J/sub π/ $\leqq$ 5).

From 2. international conference on nucleus-nucleus collisions; Visby, Sweden (10 Jun 1985).

Published in summary form only.

33123 **Search for "subthreshold" production of antiprotons and creation of fractional charges and new particles in relativistic nuclear collisions.** Abachi, S.; Shor, A.; Barasch, E.; Carroll, J.; Fisher, P.; Ganezer, K.; Igo, G.; Mulera, T.; Perez-Mendez, V.; Trentalange, S. (University of California, Los Angeles, California 90024; Lawrence Berkeley Laboratory, Berkeley, California 94720; University of California, Davis, California 95616). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 9, 2733-2736(1 May 1986). Contract AC03-76SF00098;AC03-76SF00515.

A search for "subthreshold" production of antiprotons and creation of fractional charges and new particles at 0^0 in the reaction ^{28}Si+ ^{28}Si at 2.1 GeV/nucleon has been made at six secondary rigidities. Except for one p-bar candidate, no evidence for such production is found. A summary of upper limits on the yields for charges -(1/3), -(2/3), -1, -(4/3), and -2 is presented. The results from all six rigidities are combined to yield upper limits of less than 1 particle per 10^4 to 10^7 collisions for the mass range 0.1<M<5.0 GeV, and less than one p-bar per 3.8 x 10^7 collisions.

6515 Nuclear Properties And Reactions, A=39-58, Theoretical

33124 (CEA-CONF—8060) **Longitudinal-transverse separations in coincidence experiments.** Morgenstern, J.J. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Jul 1985. 6p. (CONF-850702—5; DPh-N-S—2306). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751781.

From 11. Europhysics conference on nuclear physics with electromagnetic probes; Paris, France (1 Jul 1985).

Longitudinal and transverse separation have been performed in ^{40}Ca(e,e'p)^{39}K reaction for three kinematics around <psub(R)> = 52, 121, 146 MeV/c. A ratio σsub(L)/σsub(T) equal to approximately 42% of the free proton one was observed and compared to non-relativistic (for the proton-nucleus interaction) off-mass shell calculations, and to relativistic models calculations.

33125 (CONF-860396—7) **Experimental overview of subbarrier fusion.** Beckerman, M. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010017.

From Symposium on the many facets of heavy ion fusion reactions; Argonne, IL, USA (24 Mar 1986).

The structural variations of heavy nuclei are highlighted and how these variations correlate with simple many-body properties such as quadrupole moments and transfer Q-values. Dramatic effects occurring near closed-shells are also examined. 62 refs., 19 figs., 2 tabs. (DWL)

33126 (DOE/ER/40048—102-L4, pp 10-11) **Statistical GDR decays in ^{16}O + Ni for various Ni isotopes.** Garman, E.F.; Gundlach, J.; Feldman, G.; Harakeh, M.N.; Behr, J.A.; Osborne, J.L.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

In addition to studying ^{63}Cu* decays over a wide excitation energy range, as described in the preceding section of this report, the authors are also examining the inclusive γ-ray production cross section for ^{16}O + /sup x/Ni - induced reactions over a wide range of nickel isotope number (x = 58 to 64). Results have been obtained to date for 60-MeV ^{16}O + /sup 58,61,64/Ni. Preliminary Cascade fits to the ^{61}Ni and ^{64}Ne data indicate similar GDR parameters: GDR resonance energies E/sub G/ = 15.5 MeV, widths GAMMA = 5.5 MeV and strengths S/sub El = 0.33 in units of the classical dipole sum rule.

33127 (DOE/ER/40048—102-L4, pp 11-12) **Study of excited-state GDR's in 1f-2p shell nuclei.** Behr, J.A.; Dowell, D.H.; Feldman, G.; Garman, E.F.; Gossett, C.A.; Gundlach, J.; Harakeh, M.N.; Loveman, R.A.; Osborne, J.L.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

An earlier study of the ^{27}Al(p,γ)^{28}Si reaction revealed a series of GDR's built upon excited states in ^{28}Si up to E/sub x// sup f/ = 14.36 MeV. The authors are continuing their investigation of the properties of excited-state GDR's by studying (p,γ) reactions in the f/sub 7/2/ nuclei (A = 45-6-). Our emphasis is on understanding how the (p,γ) GDR capture strength is related to the single-proton stripping spectroscopic factors C^{2}S$^+$ for states in these nuclei up to E/sub x//sup f/ = 8 MeV. The authors will also study statistical γ-ray spectra from heavy-ion fusion reactions forming the same compound system to determine the extent to which the observed (p,γ) strength comes from statistical decay of a thermally equilibrated compound nucleus. Several targets in the f/sub 7/2/ shell were chosen to yield a combined system with interesting C^{2}S$^+$ distributions below 10 MeV, including strong, resolvable states. Data have already been obtained for the ^{43}Sc(p,γ)^{44}Ti* and ^{51}V(p,γ)^{52}Cr* reactions from E/sub p/ = 4-15 MeV (E/sub x/ = 14-25 MeV) at THETA/sub γ/ = 90^0, in addition to five-point angular distributions for E/sub p/ = 7, 11, 15 MeV. The statistical reaction ^{46}Ti(α,γ)^{50}Cr* has also been studied at E/sub α/ = 24 and 17.2 MeV (E/sub X/ = 32 and 25 MeV). Results indicate that the γ-ray strength distribution does in fact correspond qualitatively with the proton stripping strength.

33128 (DOE/ER/40048—102-L4, pp 14-16) **Excited-state giant resonances observed in the ^{39}K(p,γ)^{40}Ca and ^{40}Ca(p, γ)^{41}Sc reactions.** Dowell, D.H.; Gossett, C.A.; Ricken, L.; Sandorfi, A.M.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have measured ^{39}K(p, γ)^{40}Ca and ^{40}Ca (p,γ)^{41}Sc cross sections at THETA/sub γ/ = 90^0 for E/sub p/ = 10-36 MeV using the two-stage and three-stage tandem accelerators at Brookhaven National Laboratory. Sample gamma-ray spectra for ^{39}K(p,γ)^{40}Ca at E/sub p/ = 18 MeV and for ^{40}Ca(p,γ)^{41}Sc at E/sub p/ = 25 MeV are shown. Also illustrated are the proton stripping spectroscopic factors, C^{2}S/sub p/$^+$. Strong correlation between the structure in the (p,γ) cross section and the distribution of stripping strength is observed. Evidence of a large concentration of single-particle strength at E/sub X//sup f/ ~ 9.6 MeV not previously observed in proton stripping is seen in the ^{39}K(p,γ)^{40}Ca data. The authors also find a broad concentration of strength near E/sub X//sup f/ ~ 14.5 MeV in ^{40}Ca. The authors observe structure in

the final-state single-particle strength distribution in the $^{40}Ca(p,\gamma)^{41}Sc$ reaction up to E/sub X//sup f/ ~ 10 MeV, and evidence for excited-state GDR's built upon broad distributions of single-particle strength in ^{41}Sc up to E/sub X//sup f/ ~ 23 MeV.

(Max-Planck-Institut fuer Kernphysik, Heidelberg, West Germany). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The measurement was performed with an 80 MeV ^{16}O pulsed beam from the MPI Heidelberg Tandem Van de Graaff Facility, by bombarding a 400 $^{+}g/cm^{2}$ isotopically enriched ^{56}Ni target. Coincidences were detected between the MPI-GSI 4π Crystal Ball Spectrometer and an array of 4 ΔE-E surface barrier telescopes positioned at angles THETA/sub lab/ = 90°, 120°, 160°, each with typical solid angle ΔOMEGA = 40 msr. 159 of the 162 NaI(Tl) detectors of the Crystal Ball were employed. Once the Crystal Ball trigger was registered, all coincident NaI(Tl) detectors were accepted. Particle energy and angular distributions in coincidence with γ rays detected with the MPI-GSI 4π γ-ray spectrometer were measured, along with γ multiplicity and angular correlations. From the particle energy spectra it is possible to estimate the time at which high energy photons are emitted during the compound-nuclear decay. In addition, the multiplicities of both charged particles and γ rays yield information from which details about the spin distribution in the compound nucleus responsible for the energetic photons could be deduced.

33130 (DOE/ER/40048—102-L4, pp 34-35) **Effect of particle evaporation in the $^{136}Xe + ^{56}Fe$ reaction and a reinvestigation of the $^{86}Kr + ^{92}Mo$ system.** Gil, S.; Lazzarini, A.; Leach, D.D.; Lesko, K.T.; Lock, D.K.; Vandenbosch, R.; Seamster, A.G. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The nuclide distributions of Fe-like reaction products from 5.9 MeV/n ^{136}Xe on ^{56}Fe were measured as a function of excitation energy at a laboratory angle of 55.5° using the time-of-flight technique. From the measured distribution of yields the first and second moments were obtained in addition to the correlation coefficients and the isobaric variances. These results were compared with evaporation calculation. The comparison between our data and the results of the evaporation calculation shows that our data can be better described by the nucleon exchange model with the inclusion of the effect of particle evaporation. The isobaric variances were measured for the 430 MeV $^{86}Kr + ^{92}Mo$ system at 39° in the laboratory using the time-of-flight technique. Our measured variances are smaller than those obtained by Berlanger et al. at low energy losses and are in agreement with the results from the nucleon exchange model.

33131 (DOE/ER/70035—7, pp 38-42) **Radiochemical studies of unusual projectile fragments.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

In last year's Annual Report, we reported the first results of the experimental program of R. Brandt and co-workers to study the interaction of projectile fragments in copper using radioactivation techniques. (Our role has been to assist Brandt et al. in making their irradiations and measurements at the LBL Bevalac). In this experiment, two identical copper blocks, 1 cm thick and 8 cm in diameter, are irradiated by relativistic projectiles in different configurations. In configuration O, the blocks are touching while in configuration 10 or 20, the blocks are separated by 10 or 20 cm of air, respectively. It is assumed that when the relativistic projectiles interact with the first block of each pair, projectile fragments are created which interact with other nuclei in the first and second blocks. What is measured is the ratio of some target fragment activity, such as ^{24}Na or ^{28}Mg, produced in the second block relative to the first block, R. The values of R that were measured for different target fragments produced in the interaction of 0.9 and 1.8 GeV/A ^{40}Ar with Cu (two runs at each energy) are shown.

33132 (GANIL-P—85-10) **Light particle correlations in Ar + Au reaction at 60 MeV/A.** Ardouin, D.; Delagrange, H.; Doubre, H. (Grand Accelerateur National d'Ions Lourds (GANIL), 14 - Caen (France)). Jun 1985. 6p. (CONF-850672—15). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751807.

From 2. international conference on nucleus-nucleus collisions; Visby, Sweden (10 Jun 1985).

In intermediate-energy heavy ion collisions, particle emission prior to full statistical equilibrium is expected to provide information about the thermodynamic properties of excited nuclear matter. The question of statistical equilibrium is obviously related to the interplay between collective and two-body processes. We present in this contribution measurements of particle-particle correlations at large relative momenta to look for finger-prints of the two processes; correlations at small relative momenta which could give information about the stage when the system goes out of (local) equilibrium are also presented.

33133 (ITEP—123(1984)) **Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach.** Kiselev, S.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1984. 18p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701980.

For the Ne+U, Nb+Nb 400 MeV/nucleon and Ca+Ca 800 MeV/nucleon reactions the results of kinetic energy flow analysis carried out on the basis of classical equations-of-motion model are presented. The model describes the global values of the events and the side-splash effect observed in the experimental well. The flow angle turned out to be quite sensitive to the model effective NN potential which parametrizes the compression dynamics. This allowed to estimate the characteristics of compression zone forming in the collision process.

33134 (DOE/ER/40048—102-L4, pp 9-10) **Statistical GDR decays over a wide range of energy from the $^{63}Cu^{*}$ compound nucleus.** Garman, E.F.; Gundlach, J.; Feldman, G.; Harakeh, M.N.; Behr, J.A.; Osborne, J.L.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

As a follow-up investigation of statistical GDR emission from highly excited states in medium mass nuclei, the authors have made a study of $^{63}Cu^{*}$ over a wide range of excitation energy. The authors have formed this compound nucleus via $\alpha + ^{59}Co$ for a range of different initial excitation energies E/sub X/ = 16.9 to 28.2 MeV, via $^{12}C + ^{51}V$ for E/sub X/ = 34.7 to 52.3 MeV.

33135 (ISN—85-11) **Competing mechanisms in the $^{40}Ar + ^{68}Zn$ reaction between 10 and 30 MeV/nucleon.** Guillaume, G.; Rami, F.; Coffin, J.P.; Fahli, A.; Heusch, B.; Jundt, F.; Cole, A.J.; Kox, S. 33136 **Electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au targets by relativistic heavy ions to Z = 26.** Mercier, M.T.; Hill, J.C.; Wohn, F.K.; McCullough, C.M.; Nieland, M.E.; Winger, J.A.; Howard, C.B.; Renwick, S.; Matheis, D.K.; Smith, A.R. (Ames Laboratory and Iowa State University, Ames, Iowa 50011). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1655-1667(May 1986).

The electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au target nuclei was inferred from measurements of cross sections for the one-neutron removal reaction. Beams of 2.1 GeV/nucleon ^{1}H, ^{12}C, and ^{20}Ne, 1.8 GeV/nucleon ^{40}Ar, and 1.7 GeV/nucleon ^{56}Fe

projectiles were used. Beam intensities were monitored using the $^{12}C(RHI,X)^{11}C$ reaction, where RHI represents relativistic heavy ion beams. The experimental cross sections in excess of the estimated nuclear contributions are generally well described by use of the Weizsaaumlcker-Williams method for calculating the electromagnetic dissociation contributions but increase more slowly as the projectile charge is increased. Cross sections for one-neutron removal reactions are large for the heavier projectiles, ranging up to 707 mb. For these cases a high percentage is from the electromagnetic dissociation process.

33138 (DOE/ER/40048—102-L4, pp 2) **Searches for $\beta^+\beta^+$, β^+/EC and EC/EC decays.** Nelson, M.A.; Normon, E.B. Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

As described in last year's Annual Report, the authors have begun a search for $\beta^+\beta^+$, β^+/EC, and EC/EC decays using a 4π NaI detector system. In an attempt to reduce the background counting rate due to cosmic rays, the authors installed a large plastic scintillator veto paddle above the detector. However, this was found to produce no observable decrease in the background rate. Thus it appears that the origin of this background must be radioactive impurities in the detector itself and in the shielding material. For the immediate future, in order to obtain greater sensitivity for detecting $\beta^+\beta^+$, β^+/EC, and EC/EC decays the authors simply plan to count for long periods of time.

33139 (DOE/ER/40048—102-L4, pp 3) **Search for ^{92}Nb in nature.** Norman, E.B. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

Apt et al. have reported the observation of the t/sub 1/2/ = 3.5 x 10^7 year ^{92}Nb in a sample of natural niobium. Although the inferred abundance ratio of ^{92}Nb/^{93}Nb is only 2 x 10^{-13}, it is far larger than can be accounted for by any conventional nucleosynthetic process. Because of the difficulty in accounting for the presence of ^{92}Nb in terrestrial material, it was felt that a remeasurement of ^{92}Nb abundance should be performed. To do so, two ~1 kg samples of Nb were acquired. Using the 4π NaI detector system at the UW Laboratory for Radiation Ecology, searches are currently being made for the 561- and 935-keV γ rays known to be emitted in the decay of ^{92}Nb. To date, no positive evidence of these two γ rays has been observed.

33140 (DOE/ER/40048—102-L4, pp 13-14) **Deformation effects in the statistical decay of the giant dipole resonance.** Behr, J.A.; Feldman, G.; Gossett, C.A.; Murakami, T.; Osborne, J.L.; Snover, K.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

A measure of the effects of deformation on excited-state GDR's is obtained by comparing the gamma-ray yields from reactions in which the compound nucleus has low-lying levels which are highly deformed with those in which the compound nucleus has low lying levels which have little or no deformation. In particular, the authors have studied ^{12}C + ^{148}Sm and ^{12}C + ^{154}Sm for a ^{12}C incident energy of 63 MeV, in addition to α + ^{148}Sm and α + ^{154}Sm for E/sub α/ = 24 and 27 MeV. A comparison of the gamma-ray spectra measured at THETA/sub γ/ = 90^0 for the alpha induced reactions is shown. The additional structure observed in the high energy gamma yield for the α + ^{154}Sm reaction when compared to α + ^{148}Sm provides evidence of the splitting of the GDR strength function due to nuclear deformation at elevated nuclear temperatures. Results for the spectral shapes from the ^{12}C + ^{148}Sm and ^{12}C + ^{154}Sm reactions are currently being analyzed. Statistical model calculations from the code Cascade will be compared with the data in order to extract the energy, width and strength parameters for the GDR strength functions. These parameters will then provide quantitative information about the average deformation of excited states in the compound nucleus.

33141 (DOE/ER/40048—102-L4, pp 60-62) **Simultaneous measurement of nuclear magnetic moments by the transient field method.** Hanna, S.S.; Neyer, B.T.; Thornton, J.L. (Stanford Univ., CA). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

In the past year the authors have completed measurements of the magnetic moments of the first 2^+ states in all even Pd and Te isotopes except ^{130}Te, which was not measured because of its small counting rate. The primary goal of these experiments has been to determine deviations from the predictions of the collective model, g = Z/A. Of particular interest was the exact dependence of the magnetic moments on neutron number N and whether this dependence agreed with predictions of the Interacting Boson Approximation (IBA) and with some previous data. In this regard special emphasis was placed on modifying the usual transient field method in order to obtain much reduced systematic errors. In this modified method several isotopes were measured at once, instead of the usual one per target and the resulting γ ray lines were separated with Ge(Li) detectors instead of being observed in NaI detectors. Due to the increased resolution of the Ge(Li) detectors this procedure results in a much cleaner extraction of the angular rotations from the data. In addition target dependent errors are virtually eliminated since now beam damage or target fabrication uncertainties will affect all the isotopes equally.

33142 (DOE/ER/70035—7, pp 18-19) **Complete and incomplete fusion studies at intermediate energies. Part II.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

We have undertaken to measure the yields and differential ranges of evaporation residues from the reaction of 315 MeV ^{16}O, 420, 588 MeV ^{12}C, and 1760 MeV ^{40}Ar with the neutron-deficient rare earths ^{143}Nd and ^{144}Sm. The results of these investigations are to be compared with one another and the results of similar studies with the neutron-rich rare earths, ^{160}, ^{154}Sm and ^{176}Yb. Measurements of the yields and differential range spectra were made for all of the above systems during the past year. Data analysis is in progress for all studies except the ^{40}Ar induced reaction where data collection continues. The first preliminary results from the interaction of 315 MeV ^{16}O with ^{143}Nd show the yield distributions to be shifted to lower atomic numbers (by ~ 3 Z units) relative to the (N,Z) of the target when compared to the results of the 315 MeV ^{16}O + ^{154}Sm study. The velocity spectra for typical, most probable products in the $_{\ }^{143}$Nd reaction show substantially smaller velocities when compared to the most probable products from the ^{154}Sm reaction.

33143 (DOE/ER/70035—7, pp 26-29) **La target fragmentation induced by high energy La and U ions.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

As an extension of previous studies and as our first attempt to use the ultraheavy high energy beams available from the LBL Bevalac, we measured the target fragment yield distribution from the interaction of 400 MeV/A ^{238}U with ^{139}La. Multiple La targets of thickness ~ 380 mg/cm^2 were irradiated with a 400 MeV/A ^{139}La beam of intensity ~ 5 x 10^5 ions/min for 29 hours. The fission cross section, as represented by fragments with 50 ≦ A ≦ 80,

appears to be similar to that observed in the La + La reaction with increased yields for near-target and spallation products being observed in the U + La reaction. Comparison of these data with models for target fragmentation should prove interesting.

33144 **Identification and decay of neutron-rich ^{102}Sr and level structure of A~100 Y nuclei.** Hill, J.C.; Winger, J.A.; Wohn, F.K.; Petry, R.F.; Goulden, J.D.; Gill, R.L.; Piotrowski, A.; Mach, H. (Ames Laboratory, Ames, Iowa; Iowa State University, Ames, Iowa 50011). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1727-1735(May 1986). Contract W-7405-ENG-82;AC02-76CH00016.

The previously unreported decay of ^{103}Sr to levels in ^{103}Y has been studied from mass-separated activity produced in the thermal neutron fission of ^{235}U. A half-life for ^{102}Sr was measured to be 68 +- 8 ms. Based on γ singles and coincidence measurements, 24 γ rays were placed in a level scheme for ^{103}Y with nine excited states up to 1689 keV. Four excited states were assigned a J/sup π/ of 1^+ from logft values. Evidence for delayed-neutron emission from ^{102}Sr is reported. These results are compared with systematics for other neighboring, highly deformed, odd-odd Y and Nb nuclei. The level structure of A~100 Y nuclei, which exhibit a very abrupt transition from spherical to highly deformed shapes, is reviewed. The possibility of the existence of bands with moments of inertia close to that of a rigid rotor is discussed.

33145 **Evidence for a coexisting four-particle, four-hole band in doubly closed subshell ^{96}Zr.** Molnar, G.; Yates, S.W.; Meyer, R.A. (Institute of Isotopes, Hungarian Academy of Sciences, H-1525 Budapest, Hungary). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1843-1846(May 1986). Contract W-7405-ENG-48.

The occurence of a coexisting four-particle, four-hole band built on the first excited 0^+ state in the doubly closed subshell nucleus ^{96}Zr is established from (n,n'γ) reaction experiments and previous multiparticle transfer studies.

33146 **Delayed-neutron energy spectra of $^{93-97}$Rb and $^{143-145}$Cs.** Greenwood, R.C.; Caffrey, A.J. (Idaho National Engineering Laboratory, EG & G Idaho, Inc., Idaho Falls, ID). *Nuclear Science and Engineering;* **91**: No. 3, 305-323(Nov 1985).

Measurements of the energy spectra of delayed neutrons for the isotope-separated, fission product precursors $^{93-97}$Rb and $^{143-145}$Cs, over the energy region from about 10 to about 1300 keV are reported. These data were obtained at the TRISTAN ISOL facility using gas-filled proton-recoil pro portional counters. The data for each of the rubidium and cesium isotopes show good qualitative agreement with the existing ^{3}He ionization chamber data at energies above about200 keV. In addition, they provide definitive spectral information down to about10 keV. Of particular note is the observation of line structure below about 200 keV with energy resolution much better than that obtained using ^{3}He ionization chambers.

6518 Nuclear Properties And Reactions, A=150-189, Theoretical

33147 (DOE/ER/40048—102-L4, pp 30-31) **Projectile breakup into coincident heavy fragments.** Awes, T.; Gil, S.; Harakeh, M.N.; Murphy, M.J.; Ray, A.; Seamster, A.G.; Vandenbosch, R. (Oak Ridge National Lab., TN). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

This experiment was inspired by the question: does the breakup of a massive projectile ever produce multiple heavy fragments? By heavy the authors mean larger than the protons, deuterons, and alphas characteristically emitted by excited nuclei. To investigate, they designed a system of four solid-state detector telescopes which was sensitive to coincident heavy ions with energies in excess of several MeV/n. This system was used to observe projectile-like particles emitted in the reaction of ^{35}Cl + Ta at 18 MeV/n. The measurement was made at the Holifield Facility at Oak Ridge National Lab., and succeeded in detecting projectile breakups into coincident heavy fragments. The results show a broad distribution of coincident events, representing all possible pairings of Z = 3 to Z = 8 projectile fragments. The authors obtained coincident energy spectra for all of these fragment pairs, and analyzed their features for information about the reaction mechanism. Most of the analysis employed Monte Carlo simulation of breakup scenarios as viewed by the detector system. They found that the simulation of a sequential breakup mechanism, in which the dissociation of the projectile remnant occurs far from the target, quantitatively reproduced all of the observed characteristics of the kinematic data.

33148 (DOE/ER/70035—7, pp 8-17) **Incomplete and complete fusion studies at intermediate energies. Part I.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

Last year we began a study of complete and incomplete fusion processes in the reaction of intermediate energy heavy ions with n-rich rare earth nuclei. During the past year, we completed a preliminary analysis of some of the data from the first experiments, prepared a manuscript summarizing our findings and have continued studying these phenomena using heavier intermediate energy projectiles (at GANIL) and different energy, lower mass projectiles (at CERN). In the first experiments to be completed, we measured the yields, angular distributions and differential range spectra for individual target fragments from the interaction of 8.5 MeV/A ^{16}O, 19 MeV/A ^{16}O, 35 MeV/A ^{12}C and 86 MeV/A ^{12}C with ^{154}Sm. From the measured data, fragment isobaric yields and velocity spectra were deduced. Data are compared to model predictions.

33149 (DOE/ER/70035—7, pp 20-21) **Ho target fragmentation induced by intermediate energy ^{12}C and ^{16}O.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

The study of the fragmentation of rare earth targets, such as Ho, by energetic heavy ions offers certain unique opportunities not found in similar studies with heavier targets. In a program begun previously, we have measured the target fragment yield distributions and kinematic properties for the interaction of 17-2100 MeV/A light heavy ions (C, O, Ne) with ^{165}Ho. Here we show the isobaric yield distributions deduced from measured nuclidic formation cross sections for the interaction of various intermediate energy ^{12}C and ^{16}O ions with ^{165}Ho.

33150 **(IAE—4012/2) Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method.** Nemirovskij, P.Eh.; Kloss, Yu.Yu. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 21p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701978.

The coupled channel method application to the calculation of cross sections and polarizations of neutrons with 0.01-14 MeV energies on deformed even-even nuclei is considered. Results obtained for sup(152)Sm, sup(170)Er, sup(184)W, sup(238)U nuclei are presented on diagrams in the form of theoretically calculated curves. The dependence of cross sections and neutron polarizations on incident neutron energy and scattering angle is presented. Theoretical curves of total, elastic and inelastic cross sections are compared with the experimental data. It is necessary to note that a small shift (0.5 MeV) to the right along the E axis is observed for all theoretical curves. This shift is characteristic too for spherical nuclei sub(50)sup(115)Sn, sub(57)sup(139)La.

33151 **Excited states in neutron-deficient ^{195}Bi.** Loennroth, T.; Beausang, C.W.; Fossan, D.B.; Hildingsson, L.; Piel W.F. Jr.; Quader, M.A.; Vajda, S.; Chapuran, T.; Warburton, E.K. (Department of Physics, State University of New York, Stony Brook, New York 11794). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1641-1648(May 1986).

Excited states in ^{195}Bi were populated by the ^{182}W(^{19}F,6n) and ^{169}Tm(^{30}Si,4n) reactions. The subsequent γ-ray emission was studied using in-beam spectroscopic methods including excitation functions, γ-ray angular distributions, γ-γ-t coincidence, conversion

electron, and pulsed-beam-γ timing measurements. Three isomeric states were located in ^{195}Bi[J/sup π/,t/sub 1/2/,E]: [((13/2)$^{+}$), 32 +- 2 ns, 888 keV]; [((25/2)$^{+}$), 80 +- 10 ns, 2196 keV]; and [((29/2)$^{-}$), 750 +- 50 ns, 2311+Δ keV]. The structure of the observed states is interpreted within the shell-model framework. Systematic features of excited state energies and transition rates in the odd-A bismuth isotopes are discussed. A comparison of intruder states analogous to those in odd-A antimony nuclei of the Z = 50 transition region is made.

33152 **Identification of four new neutron-rich rare-earth isotopes.** Mach, H.; Piotrowski, A.; Gill, R.L.; Casten, R.F.; Warner, D.D. (Brookhaven National Laboratory, Upton, New York 11973; Clark University, Worcester, Massachusetts 01610; and University of Maryland, College Park, Maryland, 20742). *Physical Review Letters;* **56**: No. 15, 1547-1550(14 Apr 1986). Contract AC02-76CH00016;AC02-79ER10493;AS05-79ER10494.

Four new neutron-rich, fission-product nuclei have been identified at the on-line mass separator TRISTAN at Brookhaven National Laboratory. Their half-lives have been measured to be, for ^{156}Pm, T/sub 1/2/ = 28.2 +- 1.1 sec; for ^{159}Sm, T/sub 1/2/ = 15 +- 2 sec; for ^{160}Sm, T/sub 1/2/ = 8.7 +- 1.4 sec; and for ^{161}Eu, T/sub 1/2/ = 27 +- 3 sec. These nuclei are of particular importance in nucleosynthesis calculations, since they lie in the region of the rare-earth maximum in r-process abundances. A comparison of these and other new half-lives with recent calculations discloses a characteristic pattern of discrepancies.

6519 Nuclear Properties And Reactions, A=190-219, Theoretical

33153 (DOE/ER/40048—102-L4, pp 16-17) **Forward-to-backward asymmetries in the (γ,n) reactions around the E2 isovector giant resonance.** Debevec, P.T.; Dowell, D.H.; Halpern, I.; Morford, L.J.; Murakami, T.; Storm, D.W.; Tieger, D.R.; Wender, S.A. (Univ. of Illinois, Urbana). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

Experiments were performed by using the 39.4 MeV continuous electron beam from the University of Illinois microtron using a superconducting linac (MUSL-2) and the tagged photon facility. The front-to-back asymmetries [Y(55°)-Y(125°)]/[Y(55°)+Y(125°)] for the (γ,n) reaction were measured in three targets as a function of photon energy between 20 and 30 MeV. The neutrons were measured by an NE-213 liquid scintillator which was 30 cm in diameter and 5.1 cm thick. The asymmetry curves for ^{206}Pb and /sup nat/Pb for residual excitations between 0 and 4 MeV in the photon energy range of 20 to 26 MeV were identical within the experimental uncertainties. The asymmetries were about 0.2 for the lower photon energies and made a transition near E/sub γ/ ~ 23 MeV to ~0.6 for the higher energies. For /sup nat/Cd the pattern was similar but the transition region was about 4 MeV higher, consistent with the expected A/sup -1/3/ dependence of the locations of giant resonances. The detailed analysis of the energy dependence of the asymmetry, using the direct-semidirect model, is in progress.

33154 (DOE/ER/70035—7, pp 3-7) **Target fragment angular distributions in the interaction of 86 MeV/A ^{13}C with ^{197}Au.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

In last year's Annual Report, we reported the results of the measurement of the target fragment angular distributions for 69 different fragments (44 ≦ A ≦ 196) from the interaction of 86 MeV/A ^{13}C with ^{197}Au. During the past year, we have finished our analysis of these data and have prepared an article describing the data for publication in Nuclear Physics. For some representative fragments the laboratory system angular distributions are forward-peaked with some distributions also showing backward peaking. We have compared the shapes of these distributions with the predictions of the nuclear firestreak model and find the measured angular distributions to differ markedly from the firestreak model predictions for most cases.

33155 (DOE/ER/70035—7, pp 19-20) **Target fragment kinematics for the reaction of 49 MeV/A ^{12}C with ^{197}Au.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

The reaction mechanism(s) responsible for the formation of light fragments (A < 60) from a heavy nucleus such as ^{197}Au as the result of a heavy ion- heavy target interaction have not been clearly identified. To help us in understanding the formation of these fragments, we undertook a measurement of the angular distribution and differential ranges of these fragments in the interaction of 49 MeV/A ^{12}C with ^{197}Au. Along with these measurements, we also measured the angular distributions and differential range spectra of the heavy target fragments (A 140) from this reaction. Analysis of these data is in progress.

33156 (DOE/ER/70035—7, pp 23-25) **Target fragment kinematics in the interaction of 44 MeV/A ^{40}Ar with ^{197}Au.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

During the past year, we measured the angular distribution and differential range distribution for target fragments from the interaction of 44 MeV/A ^{40}Ar with ^{197}Au using the facilities of GANIL. Data acquisition continues as of this writing. We show the laboratory system angular distribution of a few selected target fragments from this reaction along with similar data from the interaction of 86 MeV/A ^{13}C with ^{197}Au.

33157 (DOE/ER/70035—7, pp 34-37) **^{197}Au target fragmentation induced by 1.8 GeV/A ^{40}Ar.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

As first reported in last years Annual Report, we have attempted to extend the experimental range of validity of the concepts of limiting fragmentation and factorization for heavy target systems by measuring the fragment production cross sections and kinematic properties for the interaction of 72 GeV ^{40}Ar with ^{197}Au. A range-weighted measure of the target fragment angular distribution is the F/B ratio, the ratio of fragments recoiling forward from a target (F) to those fragments recoiling backwards (B). We show the dependence of F/B for selected fragments from ^{197}Au target fragmentation upon the total projectile kinetic energy and isobaric yield distributions.

33158 **Intermediate and weak coupling in ^{219}Ra.** Cottle, P.D.; Gai, M.; Ennis, J.F.; Bromley, D.A.; Beausang, C.W.; Hildingsson, L.; Piel, W.F. Jr.; Fossan, D.B.; Olness, J.W. (A.W. Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1855-1858(May 1986). Contract AC02-76ER03074;AC02-76CH00016.

The level scheme of ^{219}Ra established via a study of the ^{208}Pb(^{14}C,3n)^{219}Ra reaction is presented. The structure of the rotational band based on the ground state is interpreted as reflecting a g(sub 9/2) valence neutron weakly coupled to a spherical ^{218}Ra core. A non-yrast side band is observed, having tentative (11/2)$^{-}$, (15/2)$^{-}$, . . . level assignments. An (11/2)$^{-}$ state could result from the anomalous J = j-2 intermediate strength coupling of a j(sub 15/2) neutron to the ^{218}Ra core. The relevance of a weak coupling model to the understanding of high spin (J>j) parity doublets and the surprisingly different experimentally observed level schemes of 2 $_{88}$^{19}Ra and 2 $_{89}$^{19}Ac are discussed.

33159 **Measurement of $\pi i/\pi^{-}$ cross section ratio for the giant quadrupole resonance in ^{208}Pb.** Seestrom-Morris, S.J.; Morris, C.L.; Moss, J.M.; Carey, T.A.; Drake, D.; Dousse, J.H.; Bland, L.C.; Adams, G.S. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545; University of Minnesota, Minneapolis, Minnesota 55455). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1847-1850(May 1986).

Cross sections have been measured for π^+ and π^- scattering to the giant resonance region of ^{208}Pb with 162-MeV pions. The value of $R = \sigma(\pi^-)/\sigma(\pi^+)$ measured for the giant quadrupole resonance is 2.72. A distorted wave impulse approximation analysis of these data using collective model form factors gives the ratio of neutron to proton matrix elements to be 3.8. This is much larger than expected from the hydrodynamical model which predicts a value of N/Z of 1.54.

33160 **Nuclear data sheets for A = 208.** Martin, M.J. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Nuclear Data Sheets;* 47: No. 4, 797-964(Apr 1986). Contract AC05-84OR21400.

Detailed level schemes, decay schemes, and the experimental data on which they are based are presented for all nuclei with mass number A = 208. The experimental data are evaluated; inconsistencies and discrepancies are noted; and adopted values for level and γ-ray energies, γ intensities, as well as for other nuclear properties are given.

33161 (DOE/ER/40048—102-L4, pp 21-22) **Study of spin-spin correlations in deep inelastic collisions.** Gobbi, A.; Hildenbrand, K.; Kuzminski, J.; Lazzarini, A.; Mueller, W.; Olmi, A.; Steltzer, H.; Toke, J. (GSI, Darmstadt, West Germany). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The authors have performed a measurement from which they can infer the spin-spin correlations in a deeply inelastic collision. They have exploited the fact that the angular distribution of fragments produced in the fission of a binary partner in deeply inelastic collision is highly anisotropic, and that the anisotropy can be used as a tool to probe the alignment and magnitude of the spin of the fissioning system. Here the authors use a reaction in which both beam and projectile are fissile nuclei. In this manner the bulk of the deep inelastic yield results in final states in which both deeply inelastically scattered fragments have fissioned. The angular correlation of this four-body final state then contain information which may be related to the relative orientation of the spins of the two fragments before they fissioned. The authors have used the ^{208}Pb + ^{238}U reaction at E/sub cm/ = 945 MeV at the GSI Unilac to make their measurements. The four fragments were detected in an array of six avalanche detectors. One array consisted of two detectors on one side of the beam axis. In this manner the two correlated fragments arising from the fission of one nucleus could be observed, thus defining the mass transfer, energy loss and reaction plane for the deep inelastic collision. In addition, they sampled the mass distribution independently using three surface barrier detectors as time-of-flight telescopes.

33162 (DOE/ER/40048—102-L4, pp 32-34) **How is the excitation energy divided in partially damped collisions?.** Lazzarini, A.; Leach, D.D.; Lock, D.K.; Ray, A.; Seamster, A.G.; Vandenbosch, R. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

One of the principal remaining questions concerning quasi- and deeply-inelastic collisions is the division of the excitation energy between the two fragments. The authors have developed a new method for determining the division of excitation energy and applied it to the very mass asymmetric entrance channel system ^{56}Fe + ^{238}U. They determine the total excitation energy from the kinetic energy of the projectile-like fragment and the excitation energy appearing in the heavy fragment from the fission mass asymmetry of the coincident sequential fission fragments from the target-like partner. The relative yields of symmetric and asymmetric fission fragments is a very sensitive function of energy for excitation energies below about 60 MeV.

33163 (DOE/ER/70035—7, pp 30-34) **Uranium target fragmentation by intermediate and high energy ^{12}C and ^{20}Ne.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

In previous Annual Reports, the measurement and analysis of the target fragment formation cross sections for nuclides with $24 \leqq A \leqq 237$ from the interaction of 1.0, 3.0, 4.8, 12 GeV ^{12}C and 8.0, 20.0 GeV ^{20}Ne with ^{238}U has been reported. During the past year, final analysis of these measurements was completed and an article prepared for publication. We show the excitation functions for the formation of mostly independent yield nuclides that are representative of various classes of U target fragments and isobaric yield distributions.

33164 (DOE/ER/70035—7, pp 43-45) **Predicted halflives of transuranium nuclei.** Sep 1984. NTIS, PC A04/MF A01. File Number DE85011464.

In Nuclear chemistry progress report, September 1, 1983-August 31, 1984.

We are currently writing a monograph tentatively entitled The Elements Beyond Uranium for Wiley-Interscience. Chapters on the discovery of the transuranium elements, their chemical and physical properties, their nuclear properties, experimental techniques of studying them, their presence in nature, superheavy elements nuclear synthetic techniques, and practical applications have been written or are planned. The expected length of the book is ~ 250 pages. In connection with this effort, we have reviewed existing data on the halflives for electron capture, α and β-decay and spontaneous fission for the transuranium nuclei and we have used a set of semiempirical systematics to predict the halflives of unknown transuranium nuclei for Z = 93-110, and neutron numbers between the neutron and proton drip lines. A portion of these predictions (for the lighter actinides) is shown.

33165 **(FEI—1564) Investigation of emission neutron spectra from thorium 232 and uranium 235 for the 6 MeV neutrons.** Lovchikova, G.N.; Polyakov, A.V.; Sal'nikov, O.A.; Simakov, S.P.; Sukhikh, S.Eh.; Trufanov, A.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1984. 14p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701992.

Emission spectra of neutrons produced during bombardment of sup(232)Th and sup(235)U nuclei by 6.02 +- 0.12 MeV neutrons at 30 deg, 45 deg, 60 deg, 90 deg, 120 deg and 150 deg to the beam of incident neutrons were measured. Double-differential cross sections of inelastic neutron scattering were obtained. The values of integral cross sections of inelastic scattering are equal to 3.12 +- 0.50b for sup(232)Th and 1.98 +- 0.40b for sup(235)U. The comparison of present results with the data obtained by other authors and estimated values of inelastic scattering cross section is presented. The estimated values lie somewhat below the results of the given study but within the limits of measurement errors. The obtained cross section for sup(235)U at 6 MeV energy supports the tendency to the decrease of inelastic scattering cross section with growth of incident neutron energy.

33166 **(IAE—3862/2) Study on the aligned uranium-235 nuclear decay in the neutron energy range of 1.7 eV - 2.15 keV.** Danelyan, L.S.; Zakharov, Yu.V.; Zykov, V.M.; Mostovoj, V.I.; Stolyarov, V.A.; Biryukov, S.A.; Zysina, N.Yu.; Osochnikov, A.A.; Svettsov, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 17p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701993.

Using a time-of-flight neutron spectrometer comparative measurements of intensity of fission reaction on the aligned and non-oriented uranium-235 nuclei have been performed in order to identify the resonances caused by p-neutron capture as well as to determine the p-neutron contribution to the fission cross section in the region of unresolved resonances. In some isolated resonances differences in cross sections on aligned and non-oriented nuclei of about 10% have been observed which can permit to assign them to

p-resonances. In the region of unresolved resonances in the 0.15-2.15 keV neutron energy range to the accuracy +-1% no changes in the fission cross section during the nuclear alignment have been oberved.

33167 (IPEN-Pub—83) Study of ^{237}Np photonuclear reactions near threshold, induced by gamma rays from thermal neutron capture. Geraldo, L.P.; Vinhas, L.A.; Cesar, M.F. (Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)). 1985. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701994.

The photodisintegration of ^{237}Np has been studied using monochromatic photons produced by thermal neutron capture in several materials. The partial cross sections σ gamma, sub(f) and σ gamma, sub(n) were measured in the energy interval from 5.43 MeV to 10.83 MeV. Analysing the photofission data according to the liquid drop model, the height (E sub(f)) and the curvature ((h/2π)ω) of the simple fission barrier were determined: E sub(f) = (5.9 $^{+-}$ 0.2) MeV and (h/2π)ω = (0.8 $^{+-}$ 0.4) MeV. For the competition between photoneutron emission and fission (GAMMA sub(n) / GAMMA sub(f)) a constant value was found (1.28 $^{+-}$ 0.15) in the energy range 6.73 - 10.83 MeV. From this result the following nuclear temperatures for ^{237}Np were extracted on bases of some models of levels density: T = 0.84 $^{+-}$ 0.06 MeV (Fujimoto-Yamaguchi model) and T = 0.60 $^{+-}$ 0.04 MeV (Constant Nuclear temperature model).

33168 (JINR—R-2-85-124) Neutron production by action of high-energy nucleus beam. Barashenkov, V.S.; Levchuk, L.G.; Musul'manbekov, Zh.Zh.; Sosnin, A.N.; Shmakov, S.Yu. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Computing Techniques and Automation). 1985. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701983.

Submitted to the journal Sov. J. At. Energy.

The propagation of α and ^{12}C ion beams with the energy 1 GeV/nucleon in the fissionable target has been simulated using Monte-Carlo technique. Results of calculations are compared with the corresponding data for proton and deuteron beams.

33169 (JINR—R-7-85-267) Fragment angular distribution and fission reaction duration. Karamyan, S.A.; Bugrov, V.N.; Spiridonov, N.I. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1985. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701995.

Submitted to the journal Sov. J. Nucl. Phys. .

Detailed measurements of fission fragment angular distributions are carried out under irradiation of sup(238)U target with ^{4}He, ^{12}C and ^{22}Ne ions. Structure peculiarities of the distributions have not been found within the limits of 2-3% experiment errors. Regular dependences of the cross section on the angle are characterized by the anisotropy values which agree with the published data. The shape of angular distribution permits to assume a noticeable contribution of fission after reactions with incomplete momentum transfer. Possible peculiarities of angular distribution in the case of preequilibrium system fission are discussed. The estimation of time duration has been performed for several reactions on the base of angular distributions. Systematics of the compound nuclei lifetimes in the 10^{-20}-10^{-15} s interval is presented.

33170 Semimicroscopic calculations of elastic, inelastic, and total neutron scattering by ^{239}Pu in the energy range 10 keV < or =E/sub n/< or =10 MeV. Lagrange, C.; Madland, D.G.; Girod, M. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 5, 1616-1623(May 1986).

We investigate the capabilities of a semimicroscopic optical model potential involving fewer adjustable parameters than phenomenological models and test the sensitivity of this potential to various rotational band assumptions. Our analysis of the model capabilities is performed using experimental elastic, inelastic, and total cross sections as well as experimental neutron strength functions. We compare our calculations to these experiments and to the predictions of a phenomenological model. Our sensitivity study is performed for the first three rotational bands of ^{239}Pu. The two main ingredients of our calculations are the microscopic optical-model potential of Jeukenne, Lejeune, and Mahaux and nuclear densities from Hartree-Fock-Bogoliubov calculations using the density-dependent force D_1.

33171 Neutron capture cross section of ^{243}Am. Weston, L.W.; Todd, J.H. (Oak Ridge National Laboratory, Oak Ridge, TN). *Nuclear Science and Engineering;* **91**: No. 4, 444-450(Dec 1985).

The neutron capture cross section of ^{243}Am was measured from 258 eV to 92 keV. The relative capture cross sections were normalized to 74.8 b at 0.0253 eV from ENDF/B-V. Agreement with the one previous measurement in the kilo-electron-volt neutron energy range is reasonably good (about 8%). These results are needed for calculating the buildup of higher actinides in operating reactors.

33172 Neutron inelastic scattering cross sections for states above 700 keV in ^{232}Th. Ciarcia, C.A.; Couchell, G.P.; Egan, J.J.; Kegel, G.H.R.; Li, S.Q.; Mittler, A.; Pullen, D.J.; Schier, W.A.; Shao, J.Q. (University of Lowell, Department of Physics and Applied Physics, Lowell, MA). *Nuclear Science and Engineering;* **91**: No. 4, 428-443(Dec 1985).

Fast neutron inelastic scattering cross sections for levels between 700- and 1400-keV excitation energy in ^{232}Th have been measured using the (n,n') time-of-flight (TOF) technique. Measurements of 125-deg differential cross sections were made using neutrons with a typical energy spread of 8 to 10 keV, generated by the ^{7}Li(p,n)^{7}Be reaction. The incident neutron energies covere three regions: (a) 950 to 1550 keV in 50-keV intervals with the TOF spectrometer optimized to detect 200 to 600-keV scattered neutrons, (b) 1200 to 2000 keV in 100-keV intervals with the spectrometer optimized to detect 400- to 800-keV scattered neutrons, and (c) 1700 to 2100 keV in 100-keV steps with the spectrometer optimized for 800- to 1300-keV scattered neutrons. Throughout the experiment, an overall energy resolution of <15 keV was maintained. Level cross sections were deduced from the 125-deg differential scattering cross sections and are compared with (n,n'γ) measurements and the ENDF/B-V evaluation. Angular distributions for states in the 700- to 900-keV region have been measured at 1.2, 1.5, and 2.0 MeV.

33173 (BNL—38026) Symmetries in heavy nuclei and the proton-neutron interaction. Casten, R.F. (Brookhaven National Lab., Upton, NY (USA)). 1986. Contract AC02-76CH00016. 20p. (CONF-8603115—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010548.

From Symmetries in science II; Carbondale, IL, USA (24 Mar 1986).

The Interacting Boson Approximation (IBA) nuclear structure model can be expressed in terms of the U(6) group, and thereby leads to three dynamical symmetries (or group chains) corresponding to different nuclear coupling schemes and geometrical shapes. The status of the empirical evidence for these three symmetries is reviewed, along with brief comments on the possible existence of supersymmetries in nuclei. The relationships between these symmetries, the nuclear phase transitional regions linking them, and the residual proton-neutron interaction are discussed in terms of a particularly simple scheme for parameterizing the effects of that interaction. 34 refs., 15 figs.

33174 (CEA-CONF—7963) Antiproton-nucleus interaction: review of the experimental situation. Garreta, D. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France)). May 1985. 24p. (CONF-8505265—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751783.

From Conference on antinucleon and nucleon-nucleus interaction; Telluride, CO, USA (18 May 1985).

This paper will review the experimental situation of a few well-defined channels of the anti-p-nucleus interaction where the antiproton does not annihilate. It will not mention any experiment which studies annihilation of antiporotons in nuclei. The anti-p-nu-

cleus reactions that will be reviewed are the following: 1. A(anti-p,anti-p)A elastic scattering which deals with the anti-p-nucleus system in a positive energy state. 2. Anti-p-nucleus atoms where the anti-p-nucleus system is almost at zero energy and interacts mostly through the Coulomb interaction, the strong interaction being only a perturbation. 3. A(anti-p,p)X proton knock-out reaction used to produce possible bound states or resonances of the anti-p-nucleus system via strong interaction. The main reasons for studying these three channels are to provide information about the anti-p-nucleus optical potential and also, through microscopic calculations which use the elementary anti-NN amplitudes and the nuclear matter densities as inputs, to get information about these quantities. 4. A(anti-p,anti-p')A* inelastic scattering - inelastic in the sense that the nucleus is left in an excited state but the antiproton does not annihilate, that is it deals only with the elastic part of the elementary anti-NN amplitude. Inelastic scattering from collective states also sets constraints on the anti-p-nucleus potential when analysed in terms of coupled-channel calculations. When unnatural parity states are concerned, it provides a sensitive test of the spin and isospin components of these amplitudes. In addition, this paper will focus essentially on the recent experiments performed at LEAR.

33175 **(CEA-CONF—8040) What can be learned from coincidence experiments from nuclei.** Mougey, J.Y. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Jun 1985. 46p. (CONF-8506152—5; DPh-N-S—2294). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751782.

From CEBAF summer workshop; Newport News, VA, USA (3 Jun 1985).

This paper summarizes the present status and open problems in electron induced coincidence experiments below pion threshold and indicates future possible developments using high energy continuous electron beams. The recent work on quasi-elastic (e,e'p) reactions is briefly reviewed with some emphasis on electrodisintegration of few-body systems. The use of (e,e'p), (e,e'd), (e,e'2N) reactions to study two-nucleon correlations is discussed. Quasi-elastic (e,e'N) experiments to investigate possible modifications of nucleon electromagnetic properties in nuclear medium are described.

33176 **(CEA-CONF—8145) Dynamics of the input parameters.** Ngo, C. (CEA Centre d'Etudes Nucleaires de Saclay, 91 - Gif-sur-Yvette (France). Inst. de Recherche Fondamentale (IRF)). Sep 1985. 9p. (In French). (CONF-8509237—2; DPh-N-S—2302). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751779.

From National congress of the French Physical Society; Nice, France (9 Sep 1985).

Few typical examples of reaction mechanisms observed in heavy ion collisions at low, medium and high bombarding energies are presented. The present paper is primarily addressed to non specialists in the field. 18 refs.

33177 **(DOE/ER/02853—28) Electronuclear reactions and meson exchange currents.** Dubach, J. (Massachusetts Univ., Amherst (USA)). 1985. Contract AC02-76ER02853. 47p. (CONF-8506156—2). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010633.

From Los Alamos workshop on relativistic dynamics and quarks in nuclear physics; Los Alamos, NM, USA (10 Jun 1985).

The electromagnetic structure of the nucleus is described in terms of nucleon and meson degrees of freedom. The basic description of electron scattering in the formalism of Quantum Electrodynamics (QED) is reviewed, first in general terms and then with specific applications to nuclear physics. Construction of the nucleon current operators is briefly discussed. The calculational techniques for including the electromagnetic currents due to the exchange of mesons are then presented. The historical evidence for these "meson exchange currents" is reviewed and the present status of the confrontation between theory and experiment is summarized. Finally, speculation about the future directions in this field is offered. 44 refs., 23 figs.

33178 (DOE/ER/40048—102-L4, pp 29-30) **Calculation of critical energies as a function of nuclear size.** Cramer, J.G.; Loveman, R.A. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

There is a singularity in the classical deflection function of many potentials. In particular, the potentials used to characterize scattering of nuclei fall into this class. There is however a scattering energy above which this singularity in the defection function disappears. This energy is the critical energy. This energy divides elastic scattering into two regimes. Above the critical energy one might expect to see nuclear rainbows and negative angle scattering. Below it one would expect to see phenomena associated with nuclear orbiting. The authors are beginning a study of critical energies of different systems. For this study they will be using folding model potentials calculated by the same method used by Satchler and Love.

33179 (DOE/ER/40048—102-L4, pp 88-89) **Continuous-l optical model program.** Cramer, J.G. (Univ. of Washington, Seattle). Apr 1984. NTIS, PC A06/MF A01. File Number DE85007866.

In Nuclear Physics Laboratory annual report.

The author has developed the computer program DEFL which evaluates the optical model S-matrix and the quantal deflection function in arbitrarily small steps of l. An Argand diagram of the continuous S-matrix calculated for the $^{16}O + ^{16}O$ system at 40 MeV, using the well known Gobbi potential developed at Yale is shown. The kinks in the S-matrix reflect shape resonances generated by the potential.

33180 **(FEI—1566) Projection method for calculation of multi-particle resonances.** Emel'yanov, V.G.; Klimov, V.I.; Pomerantsev, V.N. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701975.

The previously suggested approach to the theory of resonance processes using the method of orthogonal projection is considered. On the base of a developed numerical scheme resonances in the α-n system are studied. The interation is chosen in the form of Woods-Saxon potential. As three-body model the three-boson system with Yamaguchi s-wave separable interaction with total moment L=1 and 2 is investigated.

33181 **(FEI—1567) On a description of resonances in an oscillator representation of the scattering theory.** Asherova, R.M.; Nechaev, Yu.I.; Smirnov, Yu.F. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.; Moskovskij Gosudarstvennyj Univ. (USSR). Nauchno-Issledovatel'skij Inst. Yadernoj Fiziki). 1984. 22p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701976.

Two methods of a search for resonance characteristics in scattering and reactions in the framework of an oscillator n representation are considered. The first method consists in finding complex poles of the S matrix. Taking as example a simple separable potential it is shown that scattering theory equations in n representation really permit to find the position and widths of resonances related to such poles. It is shown as well that the scattering theory in n representation has much in common with the usual scattering theory in coordinate representation. In fact, each notion of the usual scattering theory has its discrete analog in n space. In particular, in the paper discrete Panalog of the Jaffe-Low matrix is introduced and in approximation isolated resonance Breit-Wigner formulas for amplitude of scattering and reaction are obtained. In the above approximation partial widths and energies of resonances are most simply related to poles and residues of the p matrix obtained as a result of standard diagonalized calculations.

33182 **(FEI—1568) On an effective method for solution of a strong channel coupling problem.** Tertychnyj, G.Ya. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Obninsk. Fiziko-Ehnergeticheskij Inst.). 1984. 18p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701977.

A new calculational scheme of the strong channel coupling method (SCCM) was developed on the basis of random phase approximation with account for one-particle continuum. Preserving

all SCCM advantages it surmounts many restrictions and difficulties of a traditional method of task solution - direct integration of a set of integro-differential equations. Use of transient density and coordinate representation for the Green function enables one to operate in calculations with total 1p-1h basis and simply to take account of the Pauli principle. To solve integral equations a quick and sufficiently precise method using the Fourier-Bessel expansion for transient density is applied.

33183 **(GSI—86-4-Prepr.) Nuclear self energy - semiclassically.** Hasse, R.W. (Gesellschaft fuer Schwerionenforschung m.b.H., Darmstadt (Germany, F.R.); Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.)). Feb 1986. 15p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751761.

From 24. international winter meeting on nuclear physics; Bormio, Italy (1986).

By using semiclassical methods the polarization and correlation contributions to the real and the imaginary part of the optical potential are calculated. Together with an underlying mean field of Perey-Buck form we calculate and present results of the depths of the single-particle potentials, the effective mass as function of energy, radius and temperature, the single-particle level density and the occupation numbers. By folding the occupation numbers into a Hartree-Fock density the charge densities at the centers become smooth and better in agreement with experiment than those without correlation effects. (orig.).

33184 (INIS-SU—324, pp 3-7) **On nuclear effects in deep inelastic scattering of electrons and muons.** Savin, I.A.; Smirnov, G.I. 1984. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86780460.

In JINR rapid communications. Collection.

An assumption on the dependence of parameter R=σsub(L)/σsub(T) (where σ(w sub(L)) and σsub(T) are absorption cross sections of longitudinal and transversal photons respectively) on the atomic weight of nucleus A in the form R=aAsup(1/3) is suggested to be used for the analysis of data on deep inelastic electron scattering on nuclei. Attention is paid to :he importance of correct account of value R in such experiments as compared with those on deep inelastic muon scattering, where R approximately 0. It is shown that with the suggested dependence R(A) the results obtained till now in experiments with electrons and muons will be compatible.

33185 (INIS-SU—325, pp 35-38) **On spin-orbital splitting of neutron 3p-strength functions in Sn isotopes.** Voronov, V.V.; Stoyanov, Ch. (Joint Inst. for Nuclear Research, Dubna, USSR. Lab. of Theoretical Physics). 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE86780459.

In JINR rapid communications. Collection.

The neutron strength functions are defined by the fragmentation of one-quasiparticle component of the wave functions over many nuclear states due to a residual interaction. It is shown that the p-wave strength functions with the angular momentum of the compound nuclei J=1/2 are much higher than ones with J=3/2. These results are in agreement with the experimental data on spin-orbital splitting of 3p-strength neutron functions obtained at the Laboratory of Neutron Physics, JINR.

33186 (INIS-SU—325, pp 43-52) **Search for anomalous interaction of relativistic fragments of ^{24}Mg nucleus by means of a Cherenkov spectrometer.** Veres, I.; Golovin, V.M.; Golutvin, I.A. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE86780459.

In JINR rapid communications. Collection.

The results of the electronic experiment on the investigation of the projectile fragments interaction are presented. The experiment is made at 4.5 GeV/c ^{24}Mg beam of the JINR synchrophasotron. The main part of the apparatus is the live target assembled of 40 Cherenkov counters with 5 mm thick lucite radiator. Charge changing reactions for the primary beam and secondary fragments with 6 <= z <= 11 have been registered. The interaction mean free path of the projectile fragments and probabilities of its production based on the analysis of 10^5 interactions are presented. The absorption function is well represented by one (normal) exponential. The upper limit of the anomalous component contribution α is obtained assuming that it has mean free path of 1 cm. The result is: α < 1.4%, on an average over 6 <= Z <= 11 with 95% confidence level.

33187 **(INP—1173/PH) Linking total cross-sections for hard and soft processes through analyticity in Q^2 and sum rules.** Kwiecinski, J. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 16p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701979.

Using analyticity of the virtual Compton amplitude in Q^2 sum rules derived are rules relating meson-nucleon total cross-sections with certain integrals over large Q^2 and x=0 part of nucleon structure functions. Preliminary quantitative analysis of the sum rules for both singlet and non-singlet amplitudes is presented. For the singlet amplitude the sum rules relate, in particular, the rise of sea-quarks distributions implied by perturbative QCD and increase of total meson-proton cross-sections with energy. Quantitatively, however, nonunitary leading log Q^2 results for the former give too rapid increase of the latter. (author).

33188 **(INP—1193/PL) Compilation of investigated fusion reactions with heavy ions. Supplement. Part 2. Z_1h11-92.** Rogalska, Z. (Institute of Nuclear Physics, Krakow (Poland)). 1982. 42p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701986.

The compilation covers data published and included in Physics Abstracts from April 1, 1980 to December 31, 1980. The information on type of reaction, measurement technique, projectile energy as well as on main investigation results is given.

33189 **(ITEP—192(1983)) Neutron-to-proton ratios in pA and πip A interactions.** Bayukov, Yu.D.; Degtyarenko, P.V.; Druzhinin, B.L. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Teoreticheskoj i Ehksperimental'noj Fiziki). 1983. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701988.

Measurements of neutron and proton yields at 120 deg have been carried out in 7.5 GeV/c pA and in 1.4 GeV/c and 5.0 GeV/c π^{+-}A interactions. The ratios of secondary neutrons to protons are considered in detail. The ratios depend on kinetic energy of secondary nucleons and this dependence is more pronounced for heavy nuclei. Dependence of these ratios on the incident particle charge and the asymmetry resulting from a different number of protons and neutrons in the nucleus are discussed.

33190 **(ITP—85-8-E) Limiting model-independent correlations between three-particle parameters.** Simenog, I.V.; Shapoval, D.V. (AN Ukrainskoj SSR, Kiev. Inst. Teoreticheskoj Fiziki). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701981.

The limiting model-independent correlations between low-energy parameters and spectrum of three spinless particles are found. Due to the smallness of the range of forces the correlation dependences between scattering parameters and energy levels of three-particle systems revealed in calculations for different model interaction potentials are explained both qualitatively and quantitatively on the basis of the model-independent description. These regularities can be applied to the important case of double scattering.

33191 **(JINR—1-84-185) On a quark distribution in nuclei.** Baldin, A.M.; Panebrattsev, Yu.A.; Stavinskij, V.S. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 7p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701974.

Some regularities which follow from the experimental data on cumulative meson production are considered. They provide evidence in favor of the existance in nuclei of multiquark states whose structure strongly differs from nucleons. The condition is proposed, defining the region in which hadrons lose the role of quasiparticles of nuclear matter. The boundaries of applicability of the proton-neutron nuclear model are established.

33192 (JINR—1-84-240) Associative production of fast fragments emitted backward in nucleus-nucleus collisions. Anikina, M.Kh.; Vardenga, G.L.; Gazdzitskij, M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of High Energy). 1984. 10p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701989.

Submitted to the journal Sov. J. Nucl. Phys. .

The associative production of fast fragments emitted into the back hemisphere during particle- or nucleus-nucleus interaction is investigated. The experimental material is obtained during irradiation of streamer chamber SKM-200 by ^{4}He, ^{12}C and ^{16}O nuclei with initial momentum of 4.5 GeV/c per nucleon. The collisions with pure targets of C, Ne, Cu and Pb are investigated. Momenta and angular characterisitics of all positive particles having a momentum more than 300 MeV/c, exit angle - 120 deg and slope angle to horizontal plane less than 30 deg are measured. The results are given of the investigation of correlation between fast fragments emitted backwards and accompanying π^- mesons as well as protons knocked out of the target in nucleus- nucleus collisions. The data obtained are analyzed in the framework of the cascade model.

33193 (KFK—4007) Break up of light ions in the nuclear and Coulomb field of nuclei. Srivastava, D.K. (Kernforschungszentrum Karlsruhe G.m.b.H. (Germany, F.R.). Inst. fuer Kernphysik). Dec 1985. 67p. (CONF-8509159—5). NTIS (US Sales Only), PC A04/MF A01. File Number DE86751754.

From 17. international summer school on nuclear physics; Mikolajki, Poland (2 Sep 1985).

The break up of light ion projectiles in the nuclear and Coulomb field of nuclei is considered. Current theoretical concepts for describing break up processes and their theoretical features are discussed. An alternative method, based on a prior-interaction DWBA, is introduced for the calculation of the direct elastic break up cross sections. This method reveals the role of the internal momentum distribution of the break up fragments and includes corresponding 'finite range' effects. The Coulomb break up of ^{6}Li is studied on the basis of a quasi-sequential break up approach (following Rybicki and Austern) and results are obtained for very low relative energies of the emerging α-particles and deuteron fragments. The astrophysical interest in these cross sections is noted. A view on further extensions of the break up theory is given. (orig.).

33194 (LA—10689-PR) Applied nuclear science research and development progress report, June 1, 1985-November 30, 1985. Arthur, E.D.; Mutschlecner, A.D. (comps.). (Los Alamos National Lab., NM (USA)). Apr 1986. Contract W-7405-ENG-36. 120p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE86009799.

This six month progress report reviews activities in nuclear reaction research. Specific content includes theory and evaluation of nuclear cross sections for neutron, proton, and deuteron reactions for a number of isotopes; the processing and testing of nuclear cross section data; studies of neutron activation, fission products and actinides; and short notes on applications. Data are included in graphic and tabular form and include experimental, evaluated, and theoretical calculations and spectra. 136 refs., 81 figs., 17 tabs. (DWL)

33195 (LA-UR—86-1175) Effect of dissipation on dynamical fusion thresholds. Sierk, A.J. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 20p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010168.

The existence of dynamical thresholds to fusion in heavy nuclei ($A \geqq 200$) due to the nature of the potential-energy surface is shown. These thresholds exist even in the absence of dissipative forces, due to the coupling between the various collective deformation degrees of freedom. Using a macroscopic model of nuclear shape dynamics, It is shown how three different suggested dissipation mechanisms increase by varying amounts the excitation energy over the one-dimensional barrier required to cause compound-nucleus formation. The recently introduced surface-plus-window dissipation may give a reasonable representation of experimental data on fusion thresholds, in addition to properly describing fission-fragment kinetic energies and isoscalar giant multipole widths. Scaling of threshold results to asymmetric systems is discussed. 48 refs., 10 figs.

33196 (LBL—21272) Tilting mode in nuclear reactions. Dossing, T.; Randrup, J. (Lawrence Berkeley Lab., CA (USA)). Feb 1986. Contract AC03-76SF00098. 7p. (CONF-860270—7). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009357.

From 4. winter workshop on nuclear dynamics; Copper Mountain, CO, USA (24 Feb 1986).

The relation between tilting relaxation and the reaction plane dynamics is discussed, providing an intuitive understanding of the expression for the cross section close to the beam direction, which has recently been derived. Second, the tilting relaxation time and the related wriggling relaxation time are discussed, based upon nucleon exchange transport (window friction). Finally, recent experimental information on the tilting mode relaxation is discussed, and the dynamics of the tilting mode is discussed qualitatively for the three different types of nuclear reactions considered, compound nucleus fission, quasifission, and damped nuclear reactions. 9 refs., 3 figs.

33197 (UCRL—92492-Rev.1) Importance of level structure in nuclear reaction cross-section calculations. Revision 1. Gardner, M.A.; Gardner, D.G. (Lawrence Livermore National Lab., CA (USA)). 7 Nov 1985. Contract W-7405-ENG-48. 16p. (CONF-850942—54-Rev.1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009603.

From 190. American Chemical Society national meeting; Chicago, IL, USA (8 Sep 1985).

It is shown that level-density expressions cannot adequately represent or substitute for level structure information when making calculations of the Hauser-Feshbach type for cross sections or isomer-ratios for nuclei in the first few MeV above their ground state. It is stated that such discrete level information should include both experimentally confirmed and theoretically predicted levels. The utility of discrete level information to optimize level density calculations, to compute isomer ratios, in deriving dipole strength functions, and in the analysis of primary gamma ray spectra is emphasized, especially for nuclei far from the line of stability. 29 refs., 12 figs., 6 tabs. (DWL)

33198 (UCRL—94468) Pre-equilibrium decay processes in energetic heavy ion reactions. Blann, M. (Lawrence Livermore National Lab., CA (USA)). 15 Apr 1986. Contract W-7405-ENG-48. 20p. (CONF-8604165—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009893.

From International conference on heavy ion physics; Rochester, NY, USA (21 Apr 1986).

The Boltzmann master equation (BME) is defined for application to precompound decay in heavy ion reactions in the 10 100 MeV/nucleon regime. Predicted neutron spectra are compared with measured results for central collisions of ^{20}Ne and ^{12}C with ^{165}Ho target nuclei. Comparisons are made with subthreshold π^0 yields in heavy ion reactions between 35 and 84 MeV/nucleon, and with the π^0 spectra. The BME is found to be an excellent tool for investigating these experimentally observed aspects of non-equilibrium heavy ion reactions. 18 refs., 8 figs.

33199 Nuclei far off stability in the N/sub p/N/sub n/ scheme. Casten, R.F. (Brookhaven National Laboratory, Upton, New York, 11973 and University of Koln, Koln, West Germany). *Physical Review* [*Section*] *C: Nuclear Physics;* **33**: No. 5, 1819-1822(May 1986). Contract AC02-76CH00016.

The phenomenological prediction of properties of nuclei far off stability is greatly simplified in the N/sub p/N/sub n/ scheme for three reasons: the systematics for each observable is smooth, the similarity of different regions provides a paradigm for unknown cases and, primarily, the N/sub p/N/sub n/ scheme often transforms the process of extrapolation into one of interpolation. The same ideas find expression in the concept of N/sub p/N/sub n/ multiplets that can link known and unknown nuclei.

33200 **Configuration mixing in preequilibrium reactions: A new look at the hybrid-exciton controversy.** Bisplinghoff, J. (E Division, Lawrence Livermore National Laboratory, Livermore, California 94550 and Institut fuer Strahlen- und Kernphysik, Bonn University, Bonn, Federal Republic of Germany). *Physical Review [Section] C: Nuclear Physics;* **33**: No. 5, 1569-1580(May 1986). Contract W-7405-ENG-48.

The physical concepts of the hybrid and exciton models are reexamined and shown to constitute fundamentally different approaches to preequilibrium reactions. The difference in cross section predictions obtained from the models is not attributable: as has often been argued: to inappropriate exciton distribution functions in higher order terms or multiple chance emission. It rather rests with the question of whether or not configuration mixing is assumed to take place during equilibration and what is assumed about hole interactions. A simplified but realistic example is given to illustrate these points, and a test against experimental data is proposed to decide which model is the more appropriate to use.

33201 **Nuclear vibron model. I. The SU(3) limit.** Daley, H.J.; Iachello, F. (Department of Physics, University of Arizona, Tucson, Arizona 85721). *Annals of Physics (New York);* **167**: No. 1, 73-98(Mar 1986). Contract AC02-76ER03074.

We present a new phenomenological approach to clustering in nuclei. This approach is based on an algebraic treatment of both deformation and clustering. We discuss a particular limit of this model, SU(3), and derive analytic formulas for energies, electromagnetic transition rates, and α-decay widths.

33202 **Meson and Isobar degrees of freedom in nuclear forces.** Vinh Mau, R. (Physics Department, State University of New York at Stony Brook, Stony Brook, New York 11794). *AIP (American Institute of Physics) Conference Proceedings;* **110**: No. 1, 187-206(20 Feb 1984). (CONF-8310245—). Contract AC02-76ER13001.

From Conference on Hadron substructure in nuclear physics; McCormick's Creek S.P., IN, USA (19 Oct 1983).

The current status of the low energy theory of the NN and NN interactions is reviewed, with special attention given to the role of the meson and isobar degrees of freedom. Phenomenology and fits to recent data are also described.

33203 **Transuranium nuclei.** Seaborg, G.T.; Loveland, W.D. (Lawrence Berkeley Lab., Berkeley, CA). pp 255-330 of Treatise on heavy-ion science. Vol. 4: extreme nuclear states. Bromley, D.A. New York, NY; Plenum Press (1984).

The known transuranium elements (TUEs) are presented: Np, Pu, Am, Cm, Bk, Cf, Es, Fm, Md, No, Lr, Rf, and Ha. The history of the discovery of those elements mentioned is described. The nuclear properties of TUEs are discussed and fission barrier systematics are listed. Spontaneously fissioning isomers are reviewed and the decay of properties of transuranium nuclei are presented in extensive tables. The chemical and physical properties of TUEs are presented and the use of transuranium targets in heavy-ion reaction studies are revealed. Transuranium reaction products are identified and the synthesis of TUEs is considered.

33204 **Heavy-ion resonances.** Erb, K.A.; Bromley, D.A. (Oak Ridge National Lab., Oak Ridge, TN). pp 201-308 of Treatise on heavy-ion science. Vol. 3: compound system phenomena. Bromley, D.A. New York, NY; Plenum Press (1984).

This paper discusses the influence of the Coulomb barrier resonances and deals with the sharp resonances observed at low energies, particularly in collisions of $^{12}C + ^{12}C$ and $^{12}C + ^{16}O$ nuclei. The authors discuss the gross structure in quasielastic reactions, typified by the broad bumps with widths and spacings of some 4 to 5 MeV which are illustrated in the paper, and then the authors consider its fragmentation into the narrow resonances. A discussion of the qualitatively different, very broad structure seen at the highest energies is presented. Resonances are examined that appear primarily in extreme forward or backward angle data. The energy-dependent structure in fusion yields is examined and resonances in systems with $A \geq 40$ are discussed.

33205 **TDHF calculations of heavy-ion collisions.** Davies, K.T.R.; Devi, K.R.S.; Koonin, S.E.; Strayer, M.R. (Oak Ridge National Lab., Oak Ridge, TN). pp 3-82 of Treatise on heavy-ion science. Vol. 3: compound system phenomena. Bromley, D.A. New York, NY; Plenum Press (1984).

This paper reviews time-dependent Hartree-Fock (TDHF) calculations of heavy-ion collisions with particular emphasis on calculations which can be directly compared with experimental observables. The form of the TDHF equations, the effective interactions used, and the geometrical simplifications invoked in realistic situations are discussed. A compendium and analysis of results for fusion cross sections, deep inelastic collisions, and nonequilibrium emission are given.

33206 **Relativistic heavy-ion collisions: Experiment.** Friedlander, E.M.; Heckman, H.H. (Lawrence Berkeley Lab., Berkeley, CA). pp 403-562 of Treatise on heavy-ion science Vol. 4: extreme nuclear states. Bromley, D.A. New York, NY; Plenum Press (1984).

The authors discuss observables and pseudo-observables in relativistic heavy-ion (RHI) collisions. A review is given of traditional nuclear physics in RHI collisions that precedes a review of particle production in RHI collisions. Available evidence from ultrarelativistic collisions is investigated. This information provides guidelines in choosing observables and experimental techniques for the new envisaged heavy-ion accelerators.

33207 **The use of statistical models in heavy-ion reactions studies.** Stokstad, R.G. (Univ. of California, Berkeley, CA). pp 83-197 of Treatise on heavy-ion science. Vol. 3: compound system phenomena. Bromley, D.A. New York, NY; Plenum Press (1984).

This chapter reviews the use of statistical models to describe nuclear level densities and the decay of equilibrated nuclei. The statistical models of nuclear structure and nuclear reactions presented here have wide application in the analysis of heavy-ion reaction data. Applications are illustrated with examples of gamma-ray decay, the emission of light particles and heavier clusters of nucleons, and fission. In addition to the compound nucleus, the treatment of equilibrated fragments formed in binary reactions is discussed. The statistical model is shown to be an important tool for the identification of products from nonequilibrium decay.

33208 **(AD-A—164041/6/XAB) Numerical solutions of selected problems which arise in the theory of particle beams. Master's thesis.** Mobley, J.A. (Air Force Inst. of Tech., Wright-Patterson AFB, OH (USA). School of Engineering). Dec 1985. 106p. NTIS, PC A06/MF A01.

A previous study led to the development of a closed-form solution to the dynamic behavior of a charged-particle beam. This solution was found for a simple, but nontrivial, single degree of freedom model (the electrostatic approximation model). This thesis investigates the characteristics of this closed-form solution using three different types of inputs. The closed-form solution is then verified by using finite difference to generate compatible results. Also investigated are the characteristics of the dynamic model prior to the implementation of the electrostatic approximation.

33209 **(CEA-N—2449) Non statistical Monte-Carlo.** Mercier, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Apr 1985. 32p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751822.

We have shown that the transport equation can be solved with particles, like the Monte-Carlo method, but without random numbers. In our method, particles are created from the original source, with a variable weight taking into account both collision and absorption. These particles are followed until they leave the spatial domain, and we use them to determine a first collision source. Another set of particles is then created from this first collision source, and tracked to determine a second collision source, and

so on. This process introduces an approximation which does not exist in the Monte-Carlo method. However, we have analyzed the effect of this approximation, and shown that it can be limited. Our method is deterministic, gives reproducible results. Furthermore, when extra accuracy is needed in some region, it is easier to get more particles to go there. It has the same kind of applications: rather problems where streaming is dominant than collision dominated problems.

33210 **(CEA-N—2451) Generalized solutions of the radiative transfer equations in a singular case.** Golse, F.; Perthame, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Jul 1985. 57p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751821.

This paper is devoted to the study of the radiative transfer equations (TR). First, we prove a global existence theorem, which allows a blow-up of the opacity σsub(ν(E) when E $\rightarrow$ 0. Thus, it extends Mercier's previous result. This proof relies mainly on a non linear version of Hille-Yosida theorem. Then, we prove the uniqueness of the semigroup solving (TR), and some regularity results (in the class of functions with bounded variation). Finally, we prove the convergence of some splitting algorithms associated to (TR).

33211 **(CEA-N—2461) Steady-state transport equation resolution by particle methods, and numerical results.** Mercier, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Oct 1985. 45p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751816.

A method to solve steady-state transport equation has been given. Principles of the method are given. The method is studied in two different cases; estimations given by the theory are compared to numerical results. Results got in 1-D (spherical geometry) and in 2-D (axisymmetric geometry) are given.

33212 **(CEA-N—2465) Steady-state equations of even flux and scattering.** Verwaerde, D. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Nov 1985. 56p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE86751817.

Some mathematical properties of steady-state equation of even flux are shown in variational formalism. This theoretical frame allows to study the existence of a solution and its asymptotical behavior in opaque media (i.e. the relation with scattering equation). At last it allows to qualify the convergence velocity of resolution iterative processes used practically.

33213 **(CEA-N—2468) Temperature variance study in Monte-Carlo photon transport theory.** Giorla, J. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Oct 1985. 25p. (In French). NTIS (US Sales Only), PC A02/MF A01. File Number DE86751824.

We study different Monte-Carlo methods for solving radiative transfer problems, and particularly Fleck's Monte-Carlo method. We first give the different time-discretization schemes and the corresponding stability criteria. Then we write the temperature variance as a function of the variances of temperature and absorbed energy at the previous time step. Finally we obtain some stability criteria for the Monte-Carlo method in the stationary case.

33214 **(ENEA-RT/ING—82-20) Comparison between different codes for shielding calculations for plutonium transport cask.** Carotenuto, M.I.; Landeyro, P.A.; Pereyra Marcondes, S. (ENEA, Casaccia (Italy). Dipartimento Ciclo del Combustibile; ENEA, Saluggia (Italy). Dipartimento Ciclo del Combustibile). Jul 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86901377.

Our group works in safety analysis of fuel cycle plants, in criticality and shielding studies. Today our main problems in the shielding field concern the design of fuel fabrication lines and transport cask for plutonium enriched fuel elements. The first step to consider, before starting the design calculations, is to verify the reliability of existing project codes. For this reason we started a campaign of comparison among different codes, mainly from cost and conservativeness point of view. In normal useage conditions we have three transport codes for neutron shielding calculations: two Monte Carlo ones, MORSE C.G. and TRIPOLI, and a discreet ordinate code, ANISN. Our idea is to take a typical F.B.R. fuel element (PEC) as neutron source and to calculate the strength of dose rate. We consider as shielding materials cylinders of polythene, steel, lead concrete and water, which thickness varies from 5 cm to 30 cm and combinations of these materials. For gamma shielding verification we use the same fuel element as gamma source and the same shielding cylinders used in neutronic computations. In this case they are performed with ANISN and MERCURE-4. The different codes results are in reasonable agreement. The difference existing between MORSE C.G. surface dose and TRIPOLI one is practically comprised in the range of statistical error sum in all cases. The difference between these results and those of ANISN is due to the infinite configuration considered in ANISN modelling. The results also show good agreement between calculations realized with different cross-section libraries. From the cost point of view, of course the most convenient is the ANISN code. TRIPOLI calculations are quite cheap, but this code has the disadvantage of its limitation in the cross-section library. For the gamma dose calculations the agreement between ANISN and MERCURE-4 results is good.

33215 **(IAE—3938/9) Angular dependence of photo-emf on X-ray diffraction in ideal crystals of semiconductors with p-n junction.** Zheludeva, S.I.; Koval'chuk, M.V.; Kon, V.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 28p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701940.

The results of experimental and theoretical investigation of EMF angular dependence arising under the conditions of X-ray dynamical diffraction in crystals of semiconductors with p-n junction are presented. The cases of diffraction in Bragg geometry as well as Lane geometry in samples with p-n junctions at the inlet and outlet crystal surfaces are considered. In the case of diffraction in Bragg geometry, a strong dependence of EMF curve shape from d thickness of upper n-region at d > Lsub(ex), where Lsub(ex) is extinction length, has been found. The general form of influence function p(z) describing a contribution into EMF of electrons born in the crystal volume at the z depth is derived. A detailed theoretical analysis of influence on the EMF angular dependence shape of diffraction parameters as well as electrophysical, such as diffusion lengths of minority charge carriers in p- and n-regions. Experimental curves are in perfect agreement with calculational ones performed on the base of a developed theory.

33216 **(IAE—4019/11) Vacancy spatial redistribution in damage cascade area at stage of thermal peak.** Kapinos, V.G. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 29p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701941.

Certain possible mechanisms of vacancy redistribution in the damage cascade area (DCA) at the stage of thermal peak (TP) have been considered. The character of the melting of the crystallite microscopic volume with the structure of a DCA depleted area is studied. Simulation of migration of the minor vacancy complex, using the method of molecular dynamics (MMD), is realized and its diffusion characteristics are determined. It is shown, that in TP the drift of migrating vacancies over temperature gradient will be observed. Quantitative evaluation of the observed effect of vacancy and divacancy thermodiffusion is made.

33217 (INIS-BR—462, pp 194-197) **Helium release from metals with face-centered cubic structure.** Sciani, V.; Lucki, G.; Jung, P. (Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo, Brazil; Kernforschungsanlage Juelich G.m.b.H., Germany, F.R. Inst. fuer Festkoerperforschung). 1984. (In Portuguese). NTIS (US Sales Only), PC A17/MF A01. File Number DE86702009. (CONF-8412102—).

From 6. Brazilian congress on engineering and materials science; Rio de Janeiro, Brazil (9 Dec 1984).

The helium release from gold sheets of 5 and 54 μm of thickness and helium concentrations from 10^{-9} to 10^{-5} ap of He during the isothermal and linear annealing is studied. The helium was put in the sample through the implantation of alpha particles,

with variable energy, in the cyclotron. The free diffusion of the atoms of the helium, where the diffusion coefficient follows an Arrhenius law is studied.

33218 **(INIS-mf—10110) Application of Monte Carlo method in modelling physical and physico-chemical processes. Seminar proceedings.** (Ceske Vysoke Uceni Technicke, Prague (Czechoslovakia). Fakulta Jaderna a Fysikalne Inzenyrska). 1984. 71p. (In Czech). (CONF-8209296—). NTIS (US Sales Only), PC A04/MF A01. File Number DE86701972.

From Conference on application of Monte Carlo method in modelling physical and physico-chemical processes; Prague, Czechoslovakia (9 Sep 1982).

The seminar was held on September 9 and 10, 1982 at the Faculty of Nuclear Science and Technical Engineering of the Czech Technical University in Prague. The participants heard 11 papers of which 7 were input in INIS. The papers dealt with the use of the Monte Carlo method for modelling the transport and scattering of gamma radiation in layers of materials, the application of low-energy gamma radiation for the determination of secondary X radiation flux, the determination of self-absorption corrections for a 4π chamber, modelling the response function of a scintillation detector and the optimization of geometrical configuration in measuring material density using backscattered gamma radiation. The possibility was studied of optimizing modelling with regard to computer time, and the participants were informed of computerized nuclear data libraries.

33219 (INIS-SU—325, pp 26-34) **Reflection of ultracold neutrons from strongly absorbing media.** Golikov, V.V.; Kulagin, E.N.; Nikitenko, Yu.V. 1985. (In Russian). NTIS (US Sales Only), PC A04/MF A01. File Number DE86780459.

In JINR rapid communications. Collection.

The results are reported of the study of ultracold neutron (UCN) reflection from strongly absorbing samples of natural cadmium and of cadmium enriched with ^{113}Cd isotope up to 95%. The experimental data are well described in the framework of the theory of UCN reflection which uses the complex reflection index for the refraction of neutron waves. It follows from theoretical analysis that for the natural mixture of cadmium isotopes having a positive scattering length the neutron capture by cadmium reduces the UCN reflection index. On the contrary, if the scattering length is negative, as it is for ^{113}Cd, the neutron capture increases the reflection index. Experimental data are in agreement with calculated results if the oxide film on the cadmium surface is taken into account.

33220 **(JINR—R-14-84-429) Excitation cross section of characteristic X-ray radiation by protons and ^{4}He ions for elements with Z within 22 <= Z <= 83 range.** Brazevich, Eh.; Brazevich, Ya.; Volkof, V.F.; Gerasimov, S.A.; Lyu Zaj Ik; Osetinskij, G.M.; Purehv, A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1984. 11p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701942.

Submitted to the journal Sov. J. At. Energy.

Experimental results on the determination of characteristic X radiation (CXR) yield cross section from K- and L-shells during excitation of various elements by a beam of protons and ^{4}He ions are presented. The investigations are carried out using 18 elements with z in the range 22 <=z <= 83 and in the energy range 1.5-3.8 MeV.

33221 **(JINR—R-17-84-371) Electronic stopping power formula for energetic ions.** Bardosh, D.; Gavrilenko, G.M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1984. 6p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701932.

Submitted to the journal Acta Phys. Hung. .

Electronic stopping power has been calculated for H, He, Li, C, O, Mg and Si ion projectiles in Al, Ni, Ag and Au substrates. Ion energies range from 0.2 MeV/amu to 30 MeV/amu. The stopping power formula has been expressed as the sum of a modified Bethe formula and a modified Lindhard-Scharff-Schiott (LSS) formula. In both formulas effective charges have been applied, which were computed on the basis of universal electronic density suggested Gaspar.

33222 **(MPQ—97) Integrating box for laser-plasma reflectivity studies.** Foeldes, I.B.; Bayerl, J.; Sachsenmaier, P.; Sigel, R. (Max-Planck-Institut fuer Quantenoptik, Garching (Germany, F.R.)). Jun 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86752018.

An integrating box was constructed for laser-plasma reflectivity measurements. After careful calibration it proved to be a useful instrument which can be applied simultaneously together with other diagnostics. Measurements with gold and copper targets at different laser wavelengths prove its applicability to laser-plasma interaction studies. (orig.).

33223 **(RAL—85-074) Studies of the dynamic properties of materials using neutron scattering.** Lovesey, S.W.; Windsor, C.G. (Rutherford Appleton Lab., Chilton (UK); UKAEA Atomic Energy Research Establishment, Harwell. Materials Physics Div.). Sep 1985. 54p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86701939.

The dynamic properties of materials using the neutron scattering technique is reviewed. The basic properties of both nuclear scattering and magnetic scattering are summarized. The experimental methods used in neutron scattering are described, along with access to neutron sources, and neutron inelastic instruments. Applied materials science using inelastic neutron scattering; rotational tunnelling of a methyl group; molecular diffusion from quasi-elastic scattering; and the diffusion of colloidal particles and poly-nuclear complexes; are also briefly discussed.

33224 **Multigroup transport equations with nondiagonal cross-section matrices.** Willis, B.L.; van der Mee, C.V.M. (Center for Transport Theory and Mathematical Physics, Virginia Polytechnic Institute; State University, Blacksburg, Virginia 24061). *Journal of Mathematical Physics (New York);* 27: No. 6, 1633-1638(Jun 1986). Contract AS05-80ER10711.

Multigroup transport equations with nondiagonal cross-section matrices are studied using the Wiener-Hopf method. Formulas for the solution and the exit distribution are given in terms of the factorization of the symbol of the Wiener-Hopf equation. Unlike the formulas for a diagonal cross-section matrix, these formulas involve derivatives of the H-functions. For the case of two groups, the H-functions are computed explicitly.

33225 **Theoretical investigation of neutron scattering cross sections in Si and Ge.** Morgan, T.; Blackman, J.A.; Cooke, J.F. (Physics Department, University of Reading, Reading, England). *Physical Review* [*Section*] *B: Condensed Matter;* 33: No. 10, 7154-7159(15 May 1986). Contract AC05-84OR21400.

The development of high-flux high-energy pulsed neutron sources makes it possible to study electronic transitions in solids which are in the electron-volt range. A theoretical study has been carried out to determine the feasibility of using such sources to obtain information about the band structure of semiconductors. Calculations of the inelastic neutron scattering cross sections for germanium and silicon based on an empirical pseudopotential description of the energy bands have been com- pleted. This study is an extension of previous work to more realistic (larger) momentum transfers. The calculated cross sections were found to be quite small for realistic experimental conditions. Measurement of these relatively small cross sections could, however, provide important information about the band structure of semiconductors which cannot be obtained from most other experimental techniques.

33226 **Rainbow effect in ion channeling.** Nekovic, N. (Boris Kidri Institute of Nuclear Sciences, 11001 Belgrade, Yugoslavia; Oak Ridge National Laboratory, Oak Ridge, Tennessee 37830). *Physical Review* [*Section*] *B: Condensed Matter;* 33: No. 9, 6030-6035(1 May 1986). Contract W-7405-ENG-26.

The problem of ion channeling in very thin crystals is considered with use of a method of classical ion-molecule scattering theory complemented with the Monte Carlo method. Special atten-

tion is devoted to the rainbow effect. It is shown that this effect is a consequence of the fact that contributions of the atomic strings of the crystal to the probability of ion transmission interfere. In the calculations the projectiles were 7-MeV H^+ ions, and they were being transmitted through the <110> channel of a 21500-A-thick Si crystal; the case in which the incident energy is 10 MeV and crystal thickness 21000 A is also analyzed. The effect of thermal vibrations of the atoms of the crystal and the effect of collisions of the ion with the electrons of the crystal are taken into account.

33227 **Rainbow effect in axial ion channeling.** Krause, H.F.; Datz, S.; Dittner, P.F.; Gomez del Campo, J.; Miller, P.D.; Moak, C.D.; Nekovic, N.; Pepmiller, P.L. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review [Section] B: Condensed Matter;* **33**: No. 9, 6036-6044(1 May 1986). Contract AC05-84OR21400.

We have studied the angular scattering distributions produced in axial channeling when incident protons (7 MeV) are well aligned to the axial direction of a thin silicon crystal (1400 A). Measured angular distributions obtained in the <100> and <110> directions using a two-dimensional (2D) position-sensitive detector (resolution < or $\approx 0.015^{\circ}$) have been interpreted by comparison with Monte Carlo trajectory calculations for these channels in the momentum approximation. The measured angular distributions show structures at certain off-axis angles which are in good agreement with the calculations. The general shape and structure in the angular contour map for a given channel have been shown to be a consequence of extrema in the 2D classical deflection functions for the two Cartesian scattering angles in the detection plane. The occurrence of the extrema in a very thin crystal (i.e., a rainbow effect in axial channeling) is a consequence of the channeling geometry when atomic strings surrounding the axial channel interact with the projectile simultaneously.

33228 **Multigroup Legendre coefficients for the diamond difference continuous slowing down operator.** Morel, J.E. (Los Alamos National Laboratory, Applied Theoretical Physics Division, Los Alamos, NM). *Nuclear Science and Engineering;* **91**: No. 3, 324-331(Nov 1985).

A set of multigroup Legendre coefficients is derived that can be used to implement the diamond difference scheme for the continuous slowing down operator in standard (unmodified) S /sub n/ codes. Calculations are performed that demonstrate the validity of these coefficients, and the superior accuracy of the diamond difference scheme relative to the standard first-order multigroup method.

33229 **Improvements in calculating neutron transmission probabilities in unit-cell interface-current codes.** Worley, B.A. (Oak Ridge National Laboratory, Oak Ridge, TN). *Nuclear Science and Engineering;* **91**: No. 3, 293-304(Nov 1985).

A standard assumption used in unit-cell interface-current codes is that neutrons enter each spatial region with an isotropic angular distribution. The physical interpretation of this assumption is discussed, and the magnitude of the error introduced by it is shown for a range of practical unitcell geometries. An improvement on the calculation of first-flight transmission probabilities for onedimensional unit cells based on limiting the neutron source angular distribution to physically possible neutron flight directions is then presented. For three-region problems, one additional calculation of a revised outer region transmission probability is sufficient for determining all the revised transmission probabilities of interest. Calculation of the revised transmission probabilities requires only minor coding changes and eliminates the improper angular redistribution of neutrons at the region boundaries.

33230 **(INIS-mf—10121) Guide for controlling consumer products containing radioactive substances.** (Nuclear Energy Agency, 75 - Paris (France)). 1985. 31p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86702029.

Also published in French.

Consumer products are considered regardless of the purpose for which the radionuclide is added. For example, the purpose may be to make use of the ionising radiation emitted by the substance in the product itself (e.g. radioluminescent devices, antistatic devices and ionisation chamber smoke detectors), or to make use of some other property of the material where the presence of radiation in the final product is merely adventitious (e.g. thorium gas mantles, ceramics with uranium glazes, and products containing radioactive tracers added to facilitate manufacturing and inspection processes). The guide does not cover some products containing natural radioactive substances which have not been intentionally added, such as building materials. The guide does not cover medicinal products and pharmaceuticals, nuclear powered cardiac pacemakers, or electronic equipment, such as television receivers, that emit X-rays. Unlike the 1970 guide, this guide does not consider those products, such as EXIT signs, containing gaseous tritium light sources, that would not be supplied directly to members of the public. The guide is concerned mainly with the exposure arising from consumer products of those persons who are not subject to any regulatory controls for purposes of radiation protection in normal circumstances. Members of the public come under this heading, but not workers involved in the manufacture of consumer products. These workers will normally be subject to separate control. Radiological protection concepts and policy for the control of radioactive consumer products and licensing and post-licensing surveillance are developed.

33231 **(INIS-mf—10122) Metrology and monitoring of radon, thoron and their daughter products.** (Nuclear Energy Agency, 75 - Paris (France)). 1985. 148p. NTIS (US Sales Only), PC A07/MF A01. File Number DE86702030.

Also published in French.

The principles of measurement and monitoring are described as applied to radon and thoron gases and their daughter products in occupational and non-occupational environments. Various methods of measurement, such as grab-sampling, continuous monitoring, integrated measurements and personnel dosimetry are discussed. Uncertainties in different measurement methods are compared. An account of unattached fraction and plateout of radon daughters is included. General principles and guidelines for monitoring are presented for the purposes of practical radiation protection as well as research applications. Calibration aspects of measurement instruments are described and procedures for interlaboratory calibration are suggested. Sampling strategies for occupational and non-occupational environments are discussed and radiation protection training requirements are identified. Where sufficient information and consensus exist, guidelines on apparatus, methods and procedures for monitoring are provided. A summary of regulations in force or being developed and recommendations for monitoring radiation exposure to radon and its decay products in countries of the OECD is provided, together with cost estimates for national indoor radon surveys.

33232 (PNL-SA—13346, pp 18-24) **Litigation, standards and impact.** Vallario, E.J. (Dept. of Energy, Washington, DC). Nov 1985. NTIS, PC A20/MF A01. File Number DE86005525. (CONF-840774—).

From Workshop on radiation survey instruments and calibrations; Gaithersburg, MD, USA (10 Jul 1984).

Litigation and its implications to radiation protection will probably create the greatest pressure to enhance radiation protection instrumentation performance in the next few years. Areas of improvement such as accuracy, precision, sensitivity, and the upgrade of instrumentation that will require careful consideration on the part of the manufacturer and operational health physicist are discussed.

33233 (PNL-SA—13346, pp 25-29) **Legislation and litigation related to low-level radiation injury claims.** McCraw, T. (Dept. of Energy, Washington, DC). Nov 1985. NTIS, PC A20/MF A01. File Number DE86005525. (CONF-840774—).

From Workshop on radiation survey instruments and calibrations; Gaithersburg, MD, USA (10 Jul 1984).

Current legislation and litigation related to radiation exposure will have an enormous impact on the radiation protection and

monitoring requirements of the future. A brief review of some proposed injury compensation bills for veterans and a recent court decision for low-level radiation injury claims are reviewed.

33234 (PNL-SA—13346, pp C.2-C.5) **Interagency Committee on Occupational Radiation Protection Measurements.** Eisenhower, E.H. (National Bureau of Standards, Gaithersburg, MD). Nov 1985. NTIS, PC A20/MF A01. File Number DE86005525. (CONF-840774—).

From Workshop on radiation survey instruments and calibrations; Gaithersburg, MD, USA (10 Jul 1984).

The Interagency Committee on Occupational Radiation Protection Measurements is a group of government agency representatives who have a common concern about the quality of measurements of ionizing radiation. The Committee is interested in finding solutions for such operational problems and in the development of national programs that will assure adequate measurement quality. It was the existence of problems in a particular area of measurement, and the need for acceptable solutions that resulted in creation of the Committee. When the Conference of Radiation Control Program Directors identified problems with the accuracy and reliability of personnel dosimetry services in 1973, it created a task force to investigate possible methods for developing a performance testing program. Following usual Conference policy and procedures, it invited interested federal agencies to appoint resource persons to the task force. The committee members, functions of the committee, and activities of the committee are presented.

33235 **(CBPF-NF—060/85) Enhancement of surface magnetism due to bulk bond dilution.** Tsallis, C.; Sarmento, E.F.; Albuquerque, E.L. de. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro; Alagoas Univ., Maceio (Brazil). Dept. de Fisica; Rio Grande do Norte Univ., Natal (Brazil). Dept. de Fisica). 1985. 14p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701934.

Within a renormalization group scheme, the phase diagram of a semi-infinite simple cubic Ising ferromagnet is discussed, with arbitrary surface and bulk coupling constants, and including possible dilution of the bulk bonds. It is obtained that dilution makes easier the appearance of surface magnetism in the absence of bulk magnetism.

33236 **(NORDITA—84/33-Prepr.) Renormalization theory for spin glasses based on eigenstates of the J matrix.** Hertz, J.A. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). Oct 1984. 22p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751765.

We propose a renormalization scheme for spin glasses based on localized clusters associated with the eigenstates of the exchange matrix. These clusters are chosen as the block spins of the renormalization procedure and their interactions estimated. The interaction matrix of this new spin glass problem is then diagonalized to find clusters of clusters, and so on. The simplest estimate of the interactions predicts a phase transition for $d>2$. The successive levels of slow modes or clusters provide a direct description of the relevant metastable states and spin dynamics on a hierarchy of time scales. (orig.).

33237 **(NORDITA—84/40-Prepr.) Parisi function for two spin glass models.** Sibani, P.; Hertz, J.A. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark)). 1984. 58p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751764.

The probability distribution function P(q) for the overlap of pairs of metastable states and the associated Parisi order function q(x) are calculated exactly at zero temperature for two simple models. The first is a chain in which each spin interacts randomly with the sum of all the spins between it and one end of the chain; the second is an infinite-range limit of a spin glass version of Dyson's hierarchical model. Both have nontrivial overlap distributions: In the first case the problem reduces to a variable-step-length random walk problem, leading to $q(x)=\sin(\pi x)$. In the second model P(q) can be calculated by a simple recursion relation which generates devil's staircase structure in q(x). If the fraction p of antiferromagnetic bonds is less than $1/\sqrt{2}$, the staircase is complete and the fractal dimensionality of the complement of the domain where q(x) is flat is log 2/log $(1/p^2)$. In both models the space of metastable states can be described in terms of Cayley trees, which however have a different physical interpretation than in the S.K. model. (orig.).

33238 **(SAND—85-2411C) Chemical reaction in shock compression of solids.** Graham, R.A.; Morosin, B.; Horie, Y.; Venturini, E.L. (Sandia National Labs., Albuquerque, NM (USA); North Carolina State Univ., Raleigh (USA)). 1986. Contract AC04-76DP00789. 7p. (CONF-860616—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE86003502.

From International symposium on intense dynamic loading and its effects; Beijing, China (3 Jun 1986).

The study of shock induced solid state chemistry is presented. Shock modification and chemical reaction were studied by various material probes. The BET method was used to determine the specific surface area. Computerized analysis of scanning electron microscope photographs determined the particle size distribution. Other material probes such as x-ray diffraction, electron spin resonance, transmission electron microscopy, thermal analysis with differential scanning calorimetry and differential thermal analysis as well as optical microscopy were used. 23 refs.

33239 **Wave vector dependent susceptibility of a free electron gas in D dimensions and the singularity at 2k/sub F/** . Sharma, N.L.; Lee, M.H. (Department of Physics, University of Georgia, Athens, Georgia 30602). *Journal of Mathematical Physics (New York);* **27**: No. 6, 1618-1623(Jun 1986).

The static susceptibility of a free electron gas in D dimensions at $T = 0$ is obtained by techniques of dimensional regularization. Our solutions for the susceptibility chi(k,D) are given in terms of the hypergeometric function. For any integer dimensions analytic expressions are possible. The high- and low-k series solutions are shown to be related by an analytic continuation if D is an odd integer, but not related if D is an even integer. The singularity at 2k/sub F/ is a branch point, whereupon the series solutions are absolutely convergent, yielding chi(k = 2k/sub F/,D) = $(D-1)^{-1}$. The relationship of chikD has the appearance of a PVT diagram.

33240 **Noise-driven sidebranching in the boundary-layer model of dendritic solidification.** Pieters, R.; Langer, J.S. (Physics Department, University of California, Santa Barbara, California 93106). *Physical Review Letters;* **56**: No. 18, 1948-1951(5 May 1986). Contract FG03-84ER45108.

We suggest that dendritic sidebranches may, under some circumstances, be generated by selective amplification of noisy fluctuations near the tip. Our proposal is based on numerical and analytic studies of the dynamics of the two-dimensional boundary-layer model with kinetic crystalline anisotropy. Certain features of this stochastic process should make it experimentally distinguishable from a deterministic, dynamical sidebranching mechanism.

33241 **Anderson localization and breakdown of hydrodynamics in random ferromagnets.** Bruinsma, R.; Coppersmith, S.N. (Physics Department, University of California, Los Angeles, Los Angeles, California 90024). *Physical Review [Section] B: Condensed Matter;* **33**: No. 9, 6541-6544(1 May 1986). Contract AC02-76CH00016.

The dynamic structure factor of Heisenberg magnets with weak randomness is computed. Under circumstances which are explained in detail, we find failure of hydrodynamic theory in the longitudinal structure factor due to localization of spin waves. Localization induces a power-law dependence on q and ω for the neutron scattering line shape near magnetic Bragg spots. The exponent describing the power law is related to the correlation-length exponent of Anderson localization. Random anisotropy magnets appear to be promising candidates for experimental investigations.

33242 **Thermodynamic properties of a three-dimensional defect system.** Janke, W.; Kleinert, H. (Institut fuer Theorie der Elementarteilchen, Freie Universitaet Berlin, Arnimallee 14, D-1000 Berlin 33, Germany). *Physical Review [Section] B: Condensed Matter;* **33**: No. 9, 6346-6351(1 May 1986). Contract AS03-81ER40029.

We analyze the recently proposed model of defect melting in three dimensions via high- and low-temperature expansions and compare the internal energy and specific heat with the result of Monte Carlo simulations. The transition is found to be strongly of first order with a Lindemann number L>112 and a transition entropy Δs roughly-equal 1.2, thus very much resembling a crystalline melting process.

33243 **Exact renormalization group for dynamical phase transitions in hierarchical structures.** Maritan, A.; Stella, A.L. (Dipartimento di Fisica, Istituto Nazionale di Fisica Nucleare, Universita di Padova, Italy). *Physical Review Letters;* **56**: No. 16, 1754-1754(21 Apr 1986). Contract FG05-84ER45071.

A Comment on the Letter by S. Teitel and E. Domany, Phys. Rev. Lett. 55, 2176 (1985).

33244 **Multiple-scattering theory for clusters of nonoverlapping potentials of arbitrary shape.** Gonis, A. (Department of Physics and Astronomy, Northwestern University, Evanston, Illinois 60201). *Physical Review [Section] B: Condensed Matter;* **33**: No. 8, 5914-5916(15 Apr 1986). Contract FG02-84ER45080.

It is shown that the full scattering matrix associated with an assembly of nonoverlapping potentials of arbitrary convex shape has precisely the same form as the corresponding expression for potentials confined inside nonoverlapping spheres. A specific implication of this result is that the electronic structure of periodic solids can be obtained from the solutions of a secular equation formally identical to that of the Korringa-Kohn-Rostoker method for periodic muffin-tin potentials.

33245 **(CONF-8509232—2) Josephson oscillations of charge density waves.** Ruvalds, J.; Tua, P.F. (Virginia Univ., Charlottesville (USA). Dept. of Physics). 1985. Contract FG05-84ER45113. 13p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010320.

From Conference on Josephson effect: achievements and trends; Torino, Italy (16 Sep 1985).

The formation of charge density waves in solids was originally proposed as a possible mechanism for superconductivity by Froehlich. Although the experimentally discovered materials with charge density waves (CDW)s are found to have finite resistivity as a result of impurity pinning, they nevertheless reveal many interesting features including motion which is analogous to a resistively shunted Josephson junction of superconductors. The noise spectrum of CDW systems is reviewed with particular emphasis on interactions with normal as well as magnetic impurities. Future prospects for observing an amplitude variation of the noise signals induced by a magnetic field are proposed.

33246 **(NORDITA—84/42-Prepr.) On the derivation of quasi-classical equations for superconductors or ^{3}He.** Shelankov, A.L. (Nordisk Inst. for Teoretisk Atomfysik, Copenhagen (Denmark); AN SSSR, Leningrad. Fiziko-Tekhnicheskij Inst.). Nov 1984. 30p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751766.

We present a method for the derivation of the quasi-classical equations for Keldysh Green function of a superconductor or superfluid ^{3}He. It is shown that Green functions on the classical trajectories $g(Y_1,Y_2)$ which depend on two trajectory coordinates y_1 and y_2, give the full description of the system within quasi-classical accuracy. The equation of motion for $g(y_1,y_2)$ is obtained. it is shown that $g(y)=g(y+0,y)+g(y-0,y)$ is equal to the Green function in momentum space integrated with respect to xi=vsub(F)(psub(F)). The normalization condition $(g(y))^2=1$ is proved in a direct manner using the properties of $g(y_1,y_2)$ with $y_1$not$=Y_2$. The different methods of introducing the distribution function are discussed. (orig.).

33247 **(CBPF-NF—068/85) Spin-two equations.** Silveira, A. da. (Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro). 1985. 8p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701916.

Transformations that maintain invariant the spin-two equation presented by Galles are considered.

33248 **(CEA-N—2445) Some high resolution numerical schemes for hydrodynamic equation integration.** Desgraz, J.C. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Jun 1985. 81p. (In French). NTIS (US Sales Only), PC A05/MF A01. File Number DE86751819.

We present here some high resolution schemes for gas dynamical simulations in on space dimension. In case of Eulerian coordinates the schemes are formulated as a lagrangian step followed by a remap. We insist on numerical results.

33249 **(CEA-N—2460) Implicit adaptative method of mesh generation for hydrodynamic equations.** Perthame, B. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Oct 1985. 48p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751820.

Hydrodynamic problem is resolved in an implicit manner with a first order scheme coupled to equations which define mesh generation. This allow us to follow more precisely solution discontinuities.

33250 **(CEA-N—2466) Comparison of different numerical schemes for integration of hydrodynamic equations with Lagrange coordinates.** Desgraz, J.C. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Nov 1985. 48p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751818.

Results given by three numerical schemes for some problems whose analytical solution is given are compared. These three schemes are: - the Richtmyer scheme, - the PPM scheme, - the T.V.D. scheme. A variation of this last one, aimed at reducing phase error, is presented.

33251 **(CEA-R—5330) 1-D equations of radiation hydrodynamics.** Munier, A. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Nov 1985. 37p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751811.

The radiation transfer equation is derived in the comoving frame, in curvilinear coordinates, to first order in u/c, no symmetry being assumed. This equation is then specialized to 1-D, and its moments are calculated for the limiting case of Thomson scattering. The equations of radiation hydrodynamics are also given.

33252 **(CERN—85-17) Tribute to Niels Bohr.** (European Organization for Nuclear Research, Geneva (Switzerland)). 13 Nov 1985. 19p. (CONF-8505255—1). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701917.

From Special colloquium: a tribute to Niels Bohr; Geneva, Switzerland (6 May 1985).

This report is organized around the contribution of A. Pais, 'Niels Bohr and the development of physics', presented at CERN on the occasion of a special colloquium in the honour of Niels Bohr. It gives a broad survey of Bohr's life, the revolution in physics created by his quantum theory and his attempts to influence the peaceful development of nuclear energy.

33253 (INIS-SU—320, pp 284-295) **Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator.** Ilchev, A.S.; Mitryushkin, V.K. (Joint Inst. for Nuclear Research, Dubna, USSR). 1984. NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

A new technique for summing up divergent but Borel-summable series is proposed. It is argued that the Borel transform, when suitably defined to be free from singularities in the finite complex plane, can mimic the asymptotic behaviour of the underlying function and that a finite number of terms are sufficient to probe this behaviour. This possibility offers arguments in favour of considering modified Borel transformations which lead to a certain entire function as the Borel transform of the divergent series under study. The unavoidable approximation of the Borel transform is a much easier task for such functions because it is no longer necessary to perform an analytic continuation. The absolute values of the first several coefficients Asub(K) for N=2, ..., 5 are tabulated. Their numbers correspond to the quartic (N=2) anharmonic oscillator.

33254 (INIS-SU—320, pp 296-308) **Integrals of motion and symmetry of quantum systems.** Man'ko, V.I. 1984. (In Russian). NTIS (US Sales Only), PC A16/MF A01. File Number DE86780457. (CONF-8307163—Vol.2).

From 6. international seminar on high energy physics and quantum field theory; Protvino, USSR (1 Jul 1983).

Two notions: a) motion integral of a physical system, b) physical system symmetry - are analyzed and the relation of these notions is elucidated. The consideration is performed within the framework of quantum systems described with the Schroedinger equation although it is true also for classical systems and for relativistic systems described with the Dirac equation, for example. It was proved that motion integrals and the Green function are connected with each other by a series of relations. The Green function in the coordinate representation is the eigenvalue solution of a set of equations.

33255 (INIS-SU—321, pp 48-56) **On superspinor structure of homogeneous superspace of orthosymplectic groups.** Volkov, D.V.; Soroka, V.A.; Tkach, V.I. 1984. (In Russian). NTIS (US Sales Only), PC A19/MF A01. File Number DE86780458. (CONF-8407160—Vol.1).

From 7. seminar on problems of high energy physics and quantum field theory; Protvino, USSR (1 Jul 1984).

Superspinor structure of homogeneous superspaces of orthosymplectic groups are considered. It is shown how the properties of orthosymplectic group superspaces of OSp(N, 2K) group playing an important role in the supersymmetry theory can be described using superspinors. An example confirming a possibility of the relation between canonical ratios of Butten bracket and conventional methods of quantization is considered.

33256 (IPNO-DRE—85-10) **Some properties of the functions satisfying Bell's inequalities in relation to quantum mechanics.** Roussel, P. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). 1985. 46p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751805.

Having recalled the 1935 debate between A. Einstein and N. Bohr about quantum mechanics (Q.M.) the thought-experiment of D. Bohm is described and a new derivation of the Bell's inequalities is established to test the class of theories based on the hypothesis of hidden-parameters in the common past. It is shown that Q.M. violates these inequalities almost everywhere. The general properties of functions satisfying Bell's inequalities are studied in order to compare them to Q.M. predictions as regards derivatives, integrals, values, intervals, amplitudes and finally the overall behaviour: a few of the Bell's functions chosen to approach somehow Q.M. are given. Altogether, in the comparison between Q.M. and functions satisfying Bell's inequalities, an incompatibility is revealed that is stronger then that resulting from consideration of just the inequalities.

33257 (IPNO-TH—85-11) **Semiclassical approach to Dirac operators in the ground state wave function representation.** Gamonal, R. (Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire). Mar 1985. 11p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86751804.

We show that for the class of gauge field configurations which reduce the Dirac operator to the one-dimensional Witten's hamiltonian, an appropriate semiclassical quantization rule permits the computation, of the bound state spectrum in an accurate way.

33258 (LA-UR—86-1238) **Real time quantum dynamics in the Heisenberg picture.** Cooper, F. (Los Alamos National Lab., NM (USA); Boston Univ., MA (USA). Dept. of Physics). 1986. Contract W-7405-ENG-36. 15p. (CONF-860288—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010177.

From 4. symposium on current trends in physics; Bhubaneswar, India (24 Feb 1986).

In order to understand dynamics in the Heisenberg picture, a study is made of ordinary single particle quantum mechanics where the methods used can be compared with solving the Schroedinger equation numerically. The methods are generalized to field theory. Both analytic and numerical strategies are developed for solving the Heisenberg equations on a time lattice. The time development of an initial gaussian wave function is considered in various potentials in order to study both quantum tunnelling phenomena and the quantum roll. 9 refs., 1 fig. (LEW)

33259 (LA-UR—86-1262) **Time-dependent variational principle for quantum dynamics in the Schrodinger-picture.** Cooper, F.; Pi, S.Y. (Los Alamos National Lab., NM (USA); Boston Univ., MA (USA). Dept. of Physics). 1986. Contract W-7405-ENG-36. 18p. (CONF-860288—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010179.

From 4. symposium on current trends in physics; Bhubaneswar, India (24 Feb 1986).

Starting with the exact variational formulation of quantum mechanics (or quantum field theory) in the Schroedinger picture, and using Gaussian trail wave functions, an exact functional Schroedinger equation is obtained. The time-dependent Hartree-Fock approximation is obtained and extended to many oscillators and to field theory. The problem of quantum roll, in which an initial Gaussian wave packet starting at an unstable classical equilibrium point evolves in time, is treated using this formalism. Quantum tunnelling is also studied. (LEW)

33260 (LBL—20833-Rev.) **Optical systems for synchrotron radiation. Lecture 1. Introductory topics. Revision.** Howells, M.R. (Lawrence Berkeley Lab., CA (USA)). Feb 1986. Contract AC03-76SF00098. 20p. (CONF-8509255—2-Rev.). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009906.

From Synchrotron radiation sources and their applications conference; Aberdeen, Scotland (14 Sep 1985).

Various fundamental topics are considered which underlie the design and use of optical systems for synchrotron radiation. The point of view of linear system theory is chosen which acts as a unifying concept throughout the series. In this context the important optical quantities usually appear as either impulse response functions (Green's functions) or frequency transfer functions (Fourier Transforms of the Green's functions). Topics include the damped harmonic oscillator, free-space optical field propagation, optical properties of materials, dispersion, and the Kramers-Kronig relations.

33261 (LBL—20835-Rev.) **Optical systems for synchrotron radiation. Lecture 3. Monochromator systems. Revision.** Howells, M.R. (Lawrence Berkeley Lab., CA (USA)). Feb 1986. Contract AC03-76SF00098. 17p. (CONF-8509255—3-Rev.). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009905.

From Synchrotron radiation sources and their applications conference; Aberdeen, Scotland (14 Sep 1985).

General properties of monochromators are discussed, and some useful formulas for optical design are given. The discussion is

limited to the Rowland reflection grating. Topics covered include focussing properties of a toroidal grating, aberrations, dispersion, resolution, and phase space acceptance. (LEW)

33262 **(LCC—032/85) On convergence of nuclear and correlation operators in Hilbert space.** Kubrusly, C.S. (Laboratorio de Computacao Cientifica, Rio de Janeiro (Brazil)). 1985. 25p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701918.

The convergence of sequences of nuclear operators on a separable Hilbert space is studied. Emphasis is given to trace-norm convergence, which is a basic property in stochastic systems theory. Obviously trace-norm convergence implies uniform convergence. The central theme of the paper focus the opposite way, by investigating when convergence in a weaker topology turns out to imply convergence in a stronger topology. The analysis carried out here is exhaustive in the following sense. All possible implications within a selected set of asymptotic properties for sequences of nuclear operators are established. The special case of correlation operators is also considered in detail.

33263 **(ORNL—6216) Hyperbolic Stefan problem with discontinuous temperature.** Solomon, A.D.; Alexiades, V.; Wilson, D.G.; Greenberg, J. (Maryland Univ., Baltimore (USA). Dept. of Mathematics; Oak Ridge National Lab., TN (USA)). Mar 1986. Contract AC05-84OR21400. 22p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010069.

In an earlier paper a Stefan problem for hyperbolic heat transfer was formulated under the condition of continuity of the temperature at the moving front. In this paper this assumption is examined and an alternative model is presented in which continuity is not imposed. For this case, a problem with an explicit solution is presented, as are some qualitative properties of solutions to some similar problems. In addition, quasi-steady approximate solutions to certain other benchmark problems are derived. 5 refs.

33264 **(UCRL—15788) RESIS: a three-dimensional resistivity and induced polarization computer program based on a surface integral technique. Final report.** Hanson, J.M. (Hanson and Associates, Salt Lake City, UT (USA)). Feb 1986. Contract W-7405-ENG-48. 107p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE86010566.

A computer program that calculates apparent resistivity and induced polarization for the situation in which an anomalously conducting body is embedded in a homogeneous half- or whole-space is described. The program can deal with (1) fixed current probes, moving potential probes, (2) fixed potential probes, moving current probes, (3) moving current probes and moving potential probes, and (4) can generate pseudo-depth data. The code allows for two current probes and to potential probes, all of which can be moved independently along any straight line trajectory in 3-space. The half- or whole-space is required to have a uniform (homogeneous and isotropic) electrical conductivity, as does the anomalous body. The anomalous body can be any shape that is not multiply connected. The surface of the anomalous body is approximated by a set of edge-connected triangular facets. The program is written in Microsoft Fortran (Version 3.2). 6 refs., 37 figs., 4 tabs.

33265 **(UFPB-DF—09/85) Interacting collective modes in a laser cavity.** Graca, E.L.; Brito, A.L. de; Baseia, B. (Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica). 1985. 10p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701945.

Collective operators are defined for the quantized radiation field in a one-dimensional laser cavity coupled to a semi-infinite outside region and the overlaps of neighbouring collective modes are considered to show how they modify, in the linear appoximation, the time evolution of the radiation field below threshold. The model and procedure work directly within a continuous spectrum of modes and allow us to get an improved insight on the prescription for the laser field in single-mode operation.

33266 **(UFPB-DF—10/85) Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions.** Dias, M.; Chaba, A.N. (Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica). 1985. 9p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701919.

The similarities between the Fourier series method and the Poisson's summation formula method are brought out by evaluating the lattice sum g(r) sup(→) identical to Σ sub(tau) sup(→) exp(-lambda [r sup(→) - t sup(→)])/[r sup(→) - tau sup(→)] over a Bravais lattice [tau sup(→)] in three dimensions, lambda and r sup(→) being independent of tau sup(→). It is shown that the two approaches are actually equivalent by proving that the Poisson's summation formula (in any dimensionality) can, itself, be derived from the Fourier series method. An expression is also presented, ready for quick use, for a class of lattice sums Σ sub(tau) sup(→) F([r sup(→) - tau sup(→)]) over a Brafais lattice [r sup(→)] in arbitrary dimensions.

33267 **(UFPB-DF—12/85) On the generation of equivalent Hamiltonians.** Espindola, O.; Teixeira, N.L.; Espindola, M.L. (Paraiba Univ., Joao Pessoa (Brazil). Dept. de Fisica). 1985. 4p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86701920.

A new approach to the equivalence problem (in phase space) is presented. Given a Hamiltonian describing a system of particles with two degrees of freedom (and the corresponding Hamilton-Jacobi equation), it is shown how to find the most general family of Hamiltonian functions that generates new Hamilton-Jacobi equation with the following (and essential) characteristic, here defined as equivalence: every new solution is also a solution of the original Hamilton-Jacobi equation and vice-versa.

33268 **Classical dynamics and Lie groups.** Louck, J.D.; Metropolis, N. (Theoretical Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *American Journal of Physics;* **54**: No. 6, 558-564(Jun 1986).

The phase space time evolution operator for a dynamical system is derived directly from Newton's equation of motion. This operator is used to show, in an elementary way, how a Lie group enters into the description in phase space of the path of a one-dimensional damped, driven, harmonic oscillator. Concepts from Lie group theory are thus illustrated in a nontrivial but elementary and familiar setting. Generalizations of this method for Hamiltonian systems are outlined in a series of remarks that suggest the broader scope of the subject.

33269 **Direct and inverse scattering in the time domain for a dissipative wave equation. II. Simultaneous reconstruction of dissipation and phase velocity profiles.** Kristensson, G.; Krueger, R.J. (Division of Electromagnetic Theory, Royal Institute of Technology, S-100 44 Stockholm, Sweden). *Journal of Mathematical Physics (New York);* **27**: No. 6, 1683-1693(Jun 1986).

The one-dimensional inverse scattering problem for inhomogeneous lossy media is considered. The model problem involves electromagnetic wave propagation in a medium of unknown thickness with spatially varying conductivity and permittivity. Two inversion algorithms are developed in the time domain using data obtained from normally incident plane waves. These algorithms utilize reflection data from both sides of the medium, and one of them also uses transmission data. These algorithms are implemented numerically on several examples, one of which includes the effects of noisy data. The possibility of using one-sided reflection data and no transmission data is reviewed and analyzed.

33270 **Three-cocycle in quantum mechanics. II.** Grossman, B. (The Rockefeller University, 1230 York Avenue, New York, New York 10021). *Physical Review [Section] D: Particles and Fields;* **33**: No. 10, 2922-2929(15 May 1986). Contract AC02-81ER40033.

We offer a new topological interpretation of the three-cocycle in a consistent quantum mechanics. Our basis is homotopy theory. We show how higher cocycles may appear in quantum mechanics. Moreover, a three-cocycle gives rise to a nonassociative al-

gebra describing defects in a quantum-mechanical system. We also show the relation of the three-cocycle to axions in string theory.

33271 **Conditions for nondegeneracy in supersymmetric quantum mechanics.** Imbo, T.D.; Sukhatme, U.P. (Department of Physics, University of Illinois at Chicago, Chicago, Illinois 60680). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 3147-3149(15 May 1986). Contract FG02-84ER40169.

It is shown that the positive "bosonic" and "fermionic" bound-state spectra in spherically symmetric supersymmetric (SUSY) quantum mechanics are degenerate if and only if the superpotential W(r) satisfies δequivalentlim/sub r/→0r'W(r)'> or =0.5. Also, if δ<0.5, then SUSY is broken.

33272 **Gauge invariance and unitarity in higher-derivative quantum gravity.** Antoniadis, I.; Tomboulis, E.T. (Stanford Linear Accelerator Center, Stanford University, Stanford, California 94305). *Physical Review* [*Section*] *D: Particles and Fields;* **33**: No. 10, 2756-2779(15 May 1986). Contract AC03-76SF00515.

The question of unitarity is examined in the renormalizable, "higher-derivative" theory of quantum gravity. It is pointed out that the presence of a massive spin-2 ghost in the bare propagator is inconclusive, since this excitation is unstable. In the presence of unstable particles, expansions using bare propagators are impossible: modified expansions with dressed propagators that exhibit the complex nature of the unstable pole must be employed. It is found, however, that the position of the complex poles in the dressed propagator is explicitly gauge dependent. It turns out that this is a specifically gravitational effect; it does not occur in gauge theories with an internal-symmetry gauge group. On the other hand, a physical S matrix between in and out states containing only transverse, massless gravitons and physical massless matter fields is shown to be gauge independent. It then follows by a standard, albeit formal, argument that the contribution of all gauge-variant poles to its intermediate states must cancel. The physical S matrix should therefore, be unitary. In this development, the standard rules of quantum field theory are followed throughout; no ad hoc modifications, such as the Lee-Wick prescription, are ever invoked.

33273 **Quantum oscillations in one-dimensional metal rings: Average over disorder.** Li, Q.; Soukoulis, C.M. (Ames Laboratory and Department of Physics, Iowa State University, Ames, Iowa 50011). *Physical Review* [*Section*] *B: Condensed Matter;* **33**: No. 10, 7318-7321(15 May 1986). Contract W-7405-ENG-82.

We study the Aharonov-Bohm effect in single normal-metal rings and show that averaging the transmission coefficient T over disorder gives oscillations with a period of a half-flux quantum. As the elastic scattering gets stronger, the periodicity of oscillation of the conductance, which is related to T, gradually changes to a full-flux quantum, in agreement with recent experiments.

33274 **Iterative maps for bistable excitation of two-level systems.** Cho, H.M.; Tycko, R.; Pines, A.; Guckenheimer, J. (Department of Chemistry, Univeristy of California and Materials and Molecular Research Division, Lawrence Berkeley Laboratory, Berkeley, California 94720). *Physical Review Letters;* **56**: No. 18, 1905-1908(5 May 1986). Contract AC03-76SF00098.

Iterative maps on SO(3) with two stable fixed points are described. These generate bistable spectroscopic excitation sequences for isolated two-level systems. From such sequences, tailored population inversion over specific ranges of parameters such as the resonance frequency or radiation amplitude can be obtained. The ideas developed here suggest ways of designing tailored excitation sequences useful in spatially selective NMR, spin decoupling, nk-quantum selective multiple-quantum NMR, and isotope-selective zero-field NMR.

33275 **Truncation errors in the Monte Carlo renormalization group: A comparative study.** Shankar, R. (Physics Department, J. W. Gibbs Laboratory, Yale University, New Haven, Connecticut 06520). *Physical Review* [*Section*] *B: Condensed Matter;* **33**: No. 9, 6515-6518(1 May 1986). Contract AC02-76ER03075.

An explanation is given for the impressive success Swendsen has had in the determination of critical exponents using his method of truncation in the space of operators. A by-product is a way to further improve his numbers and estimate residual truncation errors.

33276 **Improved WKB radial wave functions in several bases.** Durand, B.; Durand, L. (Los Alamos National Laboratory, Los Alamos, New Mexico 87545; Department of Physics, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 2887-2898(May 1986). Contract AC02-76ER00881.

We develop approximate WKB-like solutions to the radial Schroedinger equation for problems with an angular momentum barrier using Riccati-Bessel, Coulomb, and harmonic-oscillator functions as basis functions. The solutions treat the angular momentum singularity near the origin more accurately in leading approximation than the standard WKB solutions based on sine waves. The solutions based on Riccati-Bessel and free Coulomb wave functions continue smoothly through the inner turning point and are appropriate for scattering problems. The solutions based on oscillator and bound Coulomb wave functions incorporate both turning points smoothly and are particularly appropriate for bound-state problems; no matching of piecewise solutions using Airy functions is necessary.

33277 **Improved Fermi-Segre formula for absolute value squared of (R/sub n/,1/r/sup 1/)(0) for singular and nonsingular potentials.** Durand, B.; Durand, L. (Department of Physics, University of Wisconsin, Madison, Wisconsin 53706). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 2899-2906(May 1986). Contract AC02-76ER00881.

The Fermi-Segre formula, which relates the value of a normalized S-state radial wave function at the origin to the derivative dE/sub n//dn of the bound-state spectrum in a Schroedinger problem, has been used extensively in problems in atomic and quarkonium physics. The extensions which have been proposed for angular momenta l>0 are quite inaccurate for large l for the confining potentials typical of the quarkonium system. We derive modified formulas for arbitrary l which remove this difficulty.

33278 **Solitons and four-wave mixing.** Ackerhalt, J.R.; Milonni, P.W. (Los Alamos National Laboratory (Box 1663, Mail Stop J569), University of California, Los Alamos, New Mexico 87545). *Physical Review* [*Section*] *A: General Physics;* **33**: No. 5, 3185-3198(May 1986).

We develop the formalism for studying transient four-wave-mixing phenomena in a Raman medium, and apply it to the study of solitary-wave propagation. We consider the problems of second-Stokes generation, anti-Stokes scattering, and two-pump Raman scattering.

33279 **Stability of solutions to Sturm-Liouville diffusion equations.** van der Mee, C.V.M. (Department of Mathematics and Computer Science, Clarkson University, Potsdam, New York 13676). *Transport Theory and Statistical Physics;* **15**: No. 3, 297-316(May 1986). Contract AS05-80ER10711.

Stability of solutions of abstract half-space problems of the type Tpsi'(x) = -Apsi(x)(0<x<∞) is established under perturbations of the resolvent of the (unbounded) positive self-adjoint operator A. Applications are given to Sturn-Liouville type diffusion equations.

33280 **Inequality for the infinite-cluster density in Bernoulli percolation.** Chayes, J.T.; Chayes, L. (Laboratory of Atomic and Solid State Physics, Cornell University, Ithaca, New York 14853). *Physical Review Letters;* **56**: No. 16, 1619-1622(21 Apr 1986). Contract AC02-83ER13044.

Under a certain assumption (which is satisfied whenever there is a dense infinite cluster in the half-space), we prove a differential inequality for the infinite-cluster density, P/sub infinity/(p), in Bernoulli percolation. The principal implication of this result is that if P/sub infinity/(p) vanishes with critical exponent β, then β obeys the mean-field bound $\beta <$ or $= 1$. As a corollary, we also derive an inequality relating the backbone density, the truncated susceptibility, and the infinite-cluster density.

33281 **Deterministic Ising dynamics.** Creutz, M. (Department of Physics, Brookhaven National Laboratory, Upton, New York 11973). *Annals of Physics (New York);* **167**: No. 1, 62-72(Mar 1986). Contract AC02-76CH00016.

A deterministic cellular automation rule is presented which simulates the Ising model. On each cell in addition to an Ising spin is a space-time parity bit and a variable playing the role of a momentum conjugate to the spin. The procedure permits study of non-equilibrium phenomena, heat flow, mixing, and time correlations. The algorithm can make full use of multispin coding, thus permitting fast programs involving parallel processing on serial machines.

33282 **Tests for Monte Carlo renormalization studies on Ising models.** Murthy, G.; Shankar, R. (J. W. Gibbs Laboratory of Physics, Yale University, New Haven, Connecticut 06520). *Journal of Statistical Physics;* **42**: No. 2, 275-492(Feb 1986). Contract AC02-76ER03075.

In this expanded version of an earlier letter, we consider many computational details that were omitted for want of space. For d = 2 Ising spins with up to 13 different short-range interactions, we construct the critical surface in the vicinity of (Onsager's) nearest-neighbor (nn) critical point by using the body of the available information on the solvable nn case. We then see if the Monte Carlo renormalization group flows generated from this point do indeed lie on this surface and quantify the errors if they do not.

33283 **(CONF-8604168—1) Deterministic sensitivity theory for nonlinear systems: the forward and the adjoint method.** Cacuci, D.G. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 80p. NTIS, PC A05/MF A01; GPO Dep. File Number DE86009512.

From ISPRA course on data uncertainties, sensitivities, consistency, and adjustment; Ispra, Italy (14 Apr 1986).

The main aspects underlying the rigorous mathematical formulation of deterministic sensitivity theory for nonlinear systems are presented; this formulation is based on the work by Cacuci and employs concepts and methods of nonlinear functional analysis. The functional analytic concepts underlying sensitivity theory are briefly reviewed in Section II. The rigorous formulation of sensitivity theory for nonlinear systems is presented in Section III. Section III.A presents the sensitivity theory for nonlinear systems with operator-type responses. Section III.B presents the development of the sensitivity theory for nonlinear systems with responses defined at critical points of a function of the system's state vector and parameters (maxima, minima, and saddle points). Section III.C presents sensitivity theory for nonlinear systems with feedback. Finally, Section IV summarizes and highlights the main points underlying deterministic sensitivity theory for nonlinear systems and discusses the potential of using functional analytic concepts to extend further the scope of this theory. 37 refs. (DWL)

33284 **(ORNL/TM—9931) Critical radius for nucleation.** Alexiades, V.; Solomon, A.D. (Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC05-84OR21400. 21p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010072.

The free energy of formation and the critical radius for homogeneous nucleation of a spherical nucleus in supercooled liquid, at given temperature and ambient pressure, are determined, taking fully into account surface area, curvature, and pressure effects. The specific heats and densities of the two phases are allowed to be different and all thermophysical properties are temperature dependent. In the simple case in which classical nucleation theory is valid, the results predict a critical radius of about 40% larger than the classical value, and an activation energy barrier of almost three times larger than the classical value. 8 refs.

33285 **(ORNL/TM—10016) Propagators for general nonlinear equations.** Cacuci, D.G.; Perez, R.B.; Protopopescu, V. (Oak Ridge National Lab., TN (USA)). May 1986. Contract AC05-84OR21400. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010071.

Propagators - advanced and retarded - are introduced for nonlinear problems and it is shown that they generalize the Green's functions used to solve linear problems. These propagators are generated by using the dual operator which plays, for the nonlinear problem, the same role as the customary adjoint operator for linear problems. The propagators obey a reciprocity relationship and satisfy a closed nonlinear integral equation or, alternatively, a linear integral equation that depends parametrically on the problem's solution. These equations are formulated in a canonical way, independent of dimensionally, boundary conditions and type of the underlying nonlinear problem. 8 refs.

33286 **(SAND—86-0040C) S_2-synthetic acceleration scheme for the one-dimensional S/sub n/ equations.** Lorence, L.J. Jr.; Larsen, E.W.; Morel, J.E. (Sandia National Labs., Albuquerque, NM (USA); Los Alamos National Lab., NM (USA)). 1986. Contract AC04-76DP00789. 7p. (CONF-860610—8). NTIS, PC A02/MF A01; GPO Dep. File Number DE86005628.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

An S_2-synthetic acceleration method for the one-dimensional S/sub n/ equations is developed with linear-discontinuous spatial differencing and is implemented in a new version of the ONETRAN code. The zero'th and first moments of the scattering source are accelerated. This is done by solving the S_2 equations with the Gauss quadrature rather than the diffusion equation as the low-order operator in the synthetic acceleration scheme. 5 refs., 2 tabs.

33287 **(SAND—86-0716) Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes.** Salane, D.E. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1986. Contract AC04-76DP00789. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010305.

The effect of pivoting in a code is examined for the solution of large sparse stiff systems of odes. Experiments with a recent code (DEBDFS) are presented. These experiments indicate that some pivoting for numerical stability is essential in these codes. 21 refs., 3 tabs.

33288 **(UCRL—53683) Eulerian transport in general orthogonal curvilinear coordinates.** Sinz, K. (Lawrence Livermore National Lab., CA (USA)). Oct 1985. Contract W-7405-ENG-48. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010266.

Eulerian fluid transport in general orthogonal curvilinear coordinates is calculated in the KEYSTONE code. Prescriptions are given for the volume and area calculations that allow for the curvature of the zones, as well as the complications introduced by extreme aspect ratios of the zone sizes. Singularities in the mesh are considered, and metrics are obtained from a numerically specified mesh. Many of the demonstrated techniques are independent of the coordinate system and could be used in standard Lagrangian codes. 4 refs., 2 figs.

33289 **Mathematical models of hysteresis.** Mayergoyz, I.D. (Electrical Engineering Department, University of Maryland, College Park, Maryland 20742). *Physical Review Letters;* **56**: No. 15, 1518-1521(14 Apr 1986). Contract AS05-84ER13145.

A new approach to Preisach's hysteresis model, which emphasizes its phenomenological nature and mathematical generality, is briefly described. Then the theorem which gives the necessary

and sufficient conditions for the representation of actual hysteresis nonlinearities by Preisach's model is proven. The significance of this theorem is that it establishes the limits of applicability of this model.

33290 (CEA-N—2441) Particle methods for Boltzmann equation. Hermeline, F. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). May 1985. 44p. (In French). NTIS (US Sales Only), PC A03/MF A01. File Number DE86751825.

This work is aimed at showing how to discretize an equation such as Boltzmann equation in its most general form, by particle methods. Then method is applied to some equations of plasma physics which appear as peculiar cases of Boltzmann equation, such as Vlasov equation, Bhatnager-Gross-Krook equation, Fokker-Planck equation and neutron transport equation.

33291 (CONF-860522—1) Measurement of the hydrogen recombination coefficient in the TEXT tokamak as a function of outgassing and power radiated during tokamak discharges. Langley, R.A.; Rowan, W.L.; Bravinec, R.V.; Nelin, K. (Oak Ridge National Lab., TN (USA); Texas Univ., Austin (USA). Fusion Research Center). 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010400.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

The global recombination rate coefficient k/sub r/ for hydrogen has been measured in the TEXT tokamak vacuum for various surface conditions. An attempt was made to correlate the measured values of k/sub r/ with RGA data taken prior to each k/sub r/ measurement and with the power radiated during tokamak discharges produced after each k/sub r/ measurement. The results show that: k/sub r/ increases during a series of tokamak discharges, k/sub r/ is relatively insensitive to power radiated during tokamak discharges, k/sub r/ increases with the RGA measurements of mass 28 and 40 but not with mass 18. In addition, it was found that the RGA mass 18 (H_2O) signal decreased as glow discharge experiments with hydrogen were performed.

33292 (DOE/ER/53208—1) Excitation and ionization of highly charged ions by electron impact. Progress report, September 1, 1985-April 30, 1986. Sampson, D.H. (Pennsylvania State Univ., University Park (USA)). 30 Apr 1986. Contract FG02-85ER53208. 18p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010580.

Calculations of atomic data for applications to fusion energy research are outlined, and a summary of all the results obtained for both ionization and excitation are given. The most recent results obtained within the past eight months since the present grant took effect are the following: (1) the determination of the branching ratios or relative probabilities for the final state of the core or next stage of ionization when a complex ion is excited to a very high bound level or the continuum (ionization). These branching ratios apply for either collisional or radiative transitions; (2) the determination of the resonance contribution to excitation rates for all 21 transitions involving the ground level and/or the singly excited n = 2 levels in 18 He-like ions; (3) the collision strengths and oscillator strengths for all the 88 fine structure transitions from the ground level to the singly excited levels with n = 3 and 4 in 18 Neon-like ions. Recent work on a new quasirelativistic approach is also briefly discussed. 51 refs.

33293 (DOE/ET/53088—1) Institute for fusion studies. Progress report, September 1, 1984-August 31, 1985. (Texas Univ., Austin (USA). Inst. for Fusion Studies). Aug 1985. Contract FG05-80ET53088. 74p. NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86010289.

Drift and tearing modes in a sheared cylindrical collisionless plasma column are studied. A set of differential equations in the radial coordinate are derived with small gyroradius and low-β expansion. The finite-β effects include curvature drifts, gradient-B drifts, and the parallel magnetic field perturbation. Algebraic elimination reduces the resulting set of equations to a fourth-order system. Analysis shows that bad curvature does not drive the collisionless modes unstable.

33294 (ENEA-RT/FIMA—82-8) Preliminary Monte Carlo model of neutral transport in plasma. Cupini, E.; De Matteis, A.; Simonini, R. (ENEA, Bologna (Italy). Dipartimento Tecnologie Intersettoriali di Base). Sep 1982. 23p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86901373.

A Monte Carlo program, MNP, has been written, which solves the steady-state transport equation of neutral particles in a plasma, for a fixed-source problem in a two-dimensional very general configuration. Fluxes, densities, reaction rates, wall heating and escape probabilities are the main quantities computed by the program. Two interactions of neutrals with the plasma ions and electrons have been considered: electron ionization and charge-exchange. Wall interactions considered are backscattering and reemission in atomic state. A summary description of the code is given, together with some preliminary results obtained in the study of a poloidal divertor for helium ash enrichment and exhaust. Section 2 contains a description of the interactions of neutrals with plasma; Section 3 describes the models used for interactions of neutrals with walls; in Section 4 the main features of birth from source, history tracking and estimators are given.

33295 (EUR-CEA-FC—1273) Charged fusion products in a Tokamak. Martin, G. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee; Paris-11 Univ., 91 - Orsay (France)). May 1985. 213p. (In French). NTIS (US Sales Only), PC A10/MF A01. File Number DE86751592.

In fusion reactions, charged particles are generated; they are more or less confined in the magnetic fields. Results reachable by charged fusion products analysis justify the work, especially on the large experiments like Tore-Supra or J.E.T., where the power produced may reach a few MW. They can be used as diagnostic for the plasma, and as experimental prediction of the confinement of alpha particles, which is necessary for the reactor. Practical use of a semi-conductor detector on a Tokamak is technically difficult: the problems have been studied on T.F.R. Encouraging results have been obtained, with 3 MeV (D-D) and 15 MeV (D-He^3) proton spectra. Calculations on particle trajectories, damping and scattering in Tore Supra are also presented.

33296 (EUR-CEA-FC—1278) Thermal stability of a thermonuclear plasma for different confinement scaling laws. Johner, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Oct 1985. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751802.

The thermal stability of the ignition curve is investigated using a simple OD model for a temperature dependent energy confinement time (tausub(E) is proportional to 1/Tsup(γ)). The stability limit in the (ntausub(E),T) plane is also calculated for a plasma with external heating. The degradation of confinement time with increasing temperature is found to be favourable for divergence temperature and minimum temperature for stable ignition. It also decreases the external power per unit volume necessary to reach divergence. On the contrary, it is extremely unfavourable for the required μsub(E) for divergence and ignition. Detailed results are given for the special case of the Kaye-Goldston scaling (γ=1.38).

33297 (EUR-CEA-FC—1279) Gas heating effects in the neutralisers of neutral beam injection lines. Pamela, J. (Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee). Oct 1985. 27p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86751801.

Measurements of the linear gas density in the neutraliser of the FAR neutral deuterium beam injection test line have been made, using the charged products of D(d,p)T fusion reactions. They show a disagreement with the linear density expected from conductance measurements made in the absence of beam. Non-molecular flow cannot explain this effect, but a model of gas heating seems to be able to account for it. For the JET neutral beam line, this means an efficiency loss of about 20%. Due to the narrow transverse dimension of its neutraliser, the effect on the future Tore-Supra neutral beam injection line should not be as dramatic.

33298 (FRNC-TH—2118) Reiterated inclusions of dipoles in a dense plasma. Naouri, G. (Paris-11 Univ., 91 - Orsay (France)). Jun 1983. 149p. (In French). NTIS (US Sales Only), PC A07/MF A01. File Number DE86751788.

This thesis introduces a simple model made up for the calculation of pressure effects in dense and partially ionized 3 D two component plasma. The technic used is the description of the overlapping of atomic orbitals by means of interacting dipoles incased in one another. By iteration of this procedure we get an effective two-body potential which allows us to calculate line shifts of hydrogenic ions. In conclusion we suggest a possible improvement of the method by substituting a self consistent potential to the Debye one for the calculation of the wave functions.

33299 (FRNC-TH—2123) Theoretical study of atomic structure of Z<40 elements, ionic excited state populations in a hot plasma and population inversions. Guennou, H. (Paris-11 Univ., 91 - Orsay (France)). May 1983. 197p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE86751793.

This thesis presents a theoretical method for atomic-structure calculations (energy levels, wave functions, oscillator strengths): it is a modified Hartree-Fock method including the spin-orbit interaction in the variationnal process. Two applications are first described: one concerning the resonance lines of the Krypton isoelectronic sequence, the other having for purpose the interpretation of Lsub(α) and Lsub(β) satellites in Copper. A description is made of an original collisional-radiative model, which makes use of the preceding method, and allows to calculate the populations of a great number of ionic excited levels in a plasma. This model is used in a detailed study of the Al^{10+} Lithium -like ion spectrum. It is able to explain the apparition of inversion populations for some special electronic densities and temperatures, for example between the levels corresponding to the transitions observed at 103.8, 105.7 and 154.7 A.

33300 (FRNC-TH—2124) Resonant absorption in a exponential electronic density gradient. Colunga, M. (Paris-11 Univ., 91 - Orsay (France)). Jun 1983. 120p. (In French). NTIS (US Sales Only), PC A06/MF A01. File Number DE86751790.

We use the capacitor model to study resonant absorption in a hot, unmagnetised, Maxwellian, inhomogeneous plasma. We integrate the linearised Vlasov equation to get a non local dispersion relation for the Fourier transform of the electric field. We solve this dispersion relation in two domains of the wave number, klambdasub(D). For weak gradients of the electron density, we correct the hydrodynamic equations by adding a Landau damping term. For steep gradients, we solve the dispersion relation numerically.

33301 (FRNC-TH—2126) Contribution to the study of the interaction of intense relativistic electron beam with anodic plasma. Peugnet, C. (Paris-11 Univ., 91 - Orsay (France)). 1983. 180p. (In French). NTIS (US Sales Only), PC A09/MF A01. File Number DE86751789.

The interaction relativistic electron beam-thin target study is aimed at finding conditions to high energy deposition. A classical interaction gives only a weak energy deposition, this one can only grow with electron trajectory lengthening in the target. Electric and magnetic fields can be used in this way. The experiment shows that the interaction is greatest at the end of the impulsion where a current augmentation and voltage drop occur. During a part of the impulsion, current is classically transmitted. Then it drops during electron target interaction. Electron space charge has been tried to be compensated by plasma ion source, created by laser energy deposition.

33302 (FRNC-TH—2159) Study on the hydrogen negative ion in low pressure discharges. Bruneteau, A.M. (Paris-11 Univ., 91 - Orsay (France)). Jul 1983. 392p. (In French). NTIS (US Sales Only), PC A17/MF A01. File Number DE86751794.

A new use of negative hydrogen ions is the production of intense fast neutral atom beams useful in plasma heating in thermonuclear heating. That is one of the reasons that started this study. The density of negative hydrogen ions in diffusion, and multipole-type low pressure (10^{-3} - 10^{-2} Torr) discharges is deduced from the various formation and destruction processes of the species present in these discharges. The H^- ions are essentially produced by dissociative attachment to vibrationally excited molecules and destroyed by processes the relative importance of which is discussed as a function of the discharge parameters. The experimental study of the density of the H^- ions, measured by photodetachment, as a function of these parameters, coroborates the theoretical model.

33303 (IAE—3866/7) Study on the tokamak scrape-off layer region. Bugarya, V.I.; Grashin, S.A.; Chankin, A.V. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1983. 36p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701946.

Using Langmuir probes at the T-10 and TM-4 tokamaks the effect of the plasma interaction with the tokamak wall and limiter on the scrape-off layer plasma parameter distribution over poloidal angle and along magnetic field force lines is investigated. The behaviour of the scrape-off layer plasma parameters, concentration and electron temperature, luminescence of hydrogen atom line Hsub(β) and impurity lines in the immediate proximity to the limiter and at different distances from it are studied. For this purpose in the TM-4 tokamak experiments a mobile limiter capable of moving along the torus large by-pass has been used. It is shown that the neutrals injection into the tokamak plasma occur mainly on the ion toroidal drift side, the chamber wall sputtering proceeds more intensively near the limiter. Electron temperature and concentrations in the tokamak scrape-off layer depend but slightly on the degree of the limiter movement into the plasma. In the TM-4 tokamak limiter region an Hsub(β) line enhanced luminescence is observed. The limiter luminescence drops almost exponentially with the drop length of 4 cm. The intensity of the luminescence line of sputtered material atoms of the TM-4 tokamak MoI limiter drops with an increase in the distance from the limiter, the characteristic drop length being 0.7 cm which corresponds to the 1-5 MeV atom energy. Using the TM-4 tokamak the effect is revealed of plasma concentration increase by 10-40%, as the distance from the limiter along the force lines of the magnetic field increases.

33304 (IAE—3907/6) Simulation of space dependences of charged particle distribution functions in an open adiabatic trap. Golovin, I.N.; Ershov, A.A.; Filimonenko, A.I.; Khvesyuk, V.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 24p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701944.

Study on space dependences of electron and ion distribution functions, electric potential and other plasma parameters is the actual task in connection with the development of physical representations of processes in open traps, their structure modification and production of open complex multimirror systems. Distribution functions of electron and ion velocity have been found within the framework of two dimensional systems with respect to rates space and one-dimensional systems in physical space task as well as dependence of electric potential distribution on a space coordinate in an open adiabatic trap. Numerical algorithm for calculating space

dependences of plasma parameters in a magnetic trap has been developed. A set of the task, basic equations and results of numerical similation are stated. It is shown that the profile of an external magnetic field plays a determining role in the distribution of ambipolar plotential. Magnetic fields have affects mainly on ions, and electric fields on electrons.

33305 **(IAE—3947/14) Optical system for nitrogen laser probing near electrode plasma in the Angara-1 accelerator diode.** Bajgarin, K.A.; Gubanov, E.M. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 12p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701947.

A pulse nitrogen laser, which may be used under a multimode operation conditions for diagnostics of plasma in different optical systems, is designed and manufactured. Application of the modified Schlieren method allows one to accomplish probing of dense near-to-electrode plasma in a diode of the "Angara-1" heavy-current accelerator. The results obtained indicate to the effect of the beam intrinsic magnetic field on the dynamics of anode plasma scattering.

33306 **(IAE—3961/8) On the stabilization of overheating instability of a thermonuclear reactor-tokamak.** Krasheninnikov, S.I.; Mel'dianov, A.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 8p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701950.

The fact that the stationary state of the thermonuclear deuterium-tritium reaction in the reactor-tokamak can be temperature instable is studied. The physical nature of the given instability is associated with different dependences of energetic lifetime and power of thermonuclear energy release on plasma temperature. It is revealed that realization of the steady-state self-sustaining D-T-reaction is possible at controlled pellets fueling of the central part of the plasma filament. A physical mechanism ensuring thermonuclear reaction is associated with overheating of the central part of the filament and increase of the threshold value p, while going into the stationary mode is conditioned by rather small effective lifetime of the plasma in the central region. The problem of stabilizing overheating instability of the reactor-tokamak is considered. If we assume that the power of thermonuclear energy release Q is Q approximately Tsup(p) then the parameter of exponent p drops with growth of plasma temperature and at T >= 30 keV it turns to be less than one. In this case overheating instability does not take place.

33307 **(IAE—3979/6) Calculation of the electron distribution function and plasma X-ray spectra in an external electric field.** Dnestrovskij, Yu.N.; Zajtsev, F.S.; Kostomarov, D.P.; Luk'yanitsa, A.A.; Smirnov, A.P. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 13p. (In Russian). NTIS (US Sales Only), PC A02/MF A01. File Number DE86701943.

Electron distribution function of plasma, being in a weak electric field, is derived on the basis of the numerical solution of the two-dimensional linearized kinetic equation. X-ray spectra are calculated for a wide range of a change of the external electric field at different values of plasma effective charge. The results may be used for experimental spectra processing.

33308 **(IAE—4042/7) Study on the plasma dynamics in a high-current diode. (Shadow methods).** Gorbulin, Yu.M.; Zlotnikov, D.M.; Znamenskaya, I.A.; Kalinin, Yu.G.; Skoryupin, V.A.; Shashkov, A.Yu. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 27p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701948.

Dynamics of diode plasma scattering of the "Mirasch" REB high-current accelerator is studied by the Schlieren method. The accelerator has the voltage of 800 kV, current of 200 kA at pulse duration of 60 ns under beam focusing refime. Diagnostics comprises laser probing of a diode within a wide wavelength range (0.266 μm <lambda <= 5.23 μm) with the use of different optical schemes. Deceleration of anode plasma in a dode gap is discovered, kinematic and dynamic characteristics of plasma motion are studied, and anode plasma temperature is determined. Experimental results are compared with calculations for the case of a flat plasma layer.

33309 **(INIS-BR—464) Effect of the poloidal current from the classical diffusion in the steady-state neo-classical transport.** Igna Junior, A.D. (Instituto Militar de Engenharia, Rio de Janeiro (Brazil)). 1984. 166p. (In Portuguese). NTIS (US Sales Only), PC A08/MF A01. File Number DE8o701951.

The relevant parameters of two steady-state models of a plasma column, in fusion regime, were analyzed fo- an ideal Tokamak. The neo-classical transport theory was considered in the banana regime and in the Pfirsch-Schlueter regime. The first model proposes a correction in the numerical coefficients of the transport equations. In the other one, a poloidal current from Pfirsch-Schlueter classical diffusion is considered aiming to satisfy the pressure balance.

33310 **(JET-R—84-01) MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET.** Springmann, E.; Taroni, A. (Commission of the European Communities, Abingdon (UK). JET Joint Undertaking). 1984. 35p. NTIS (US Sales Only), PC A03/MF A01. File Number DE86701949.

MESHJET is a fairly general package and can be used to generate meshes for any finite element code in two space dimensions. These finite element codes are widely used at JET. The first code is for the identification of the plasma boundary and internal flux surfaces from measurements of external fluxes and fields under the assumption that the plasma toroidal density can be represented within a given class of functions. The second code computes plasma equilibrium configurations taking into account a two-dimensional model of the transformer iron core in JET.

33311 (LBL—19100, pp 34-36) **Atomic physics and theoretical studies.** May 1985. NTIS, PC A05/MF A01. File Number DE85013314.

In Accelerator and Fusion Research Division: 1984 summary of activities.

Concurrent with the design and testing of neutral-beam systems, work continued in 1984 on developing appropriate beam diagnostic techniques. As an outgrowth of these efforts, a technique was proposed for producing intense beams of electron- and nuclear-spin-polarized atoms. This technique, which we call collisional pumping, could be used not only to heat and fuel a fusion plasma, but also to make possible new kinds of nuclear physics experiments. Theoretical work also continued, the aim being a better understanding of the processes and interactions that occur in plasmas.

33312 **(UCID—19776) Evaluation of ion-energy spectrometers for use on MFTF.** Falabella, S.; Grubb, D.P. (Lawrence Livermore National Lab., CA (USA)). 12 Apr 1983. Contract W-7405-ENG-48. 29p. NTIS, PC A03/MF A01; GPO Dep. File Number DE86010641.

This report was originally written as part of the Physics Analysis Document for the End-Loss Ion Energy Spectrometer for MFTF. In the course of that analysis, we investigated many possibilities. We have decided that this survey of the different types of analyzers and detectors could be of use to others facing a similar choice. The Appendix covers a formalism developed for finding the trajectories of charged particles in constant, uniform, but otherwise arbitrary electric and magnetic fields.

33313 **(UCRL—94360) Plasma processes in non-ideal plasmas.** More, R.M. (Lawrence Livermore National Lab., CA (USA)). Mar 1986. Contract W-7405-ENG-48. 60p. (CONF-8507117—1). NTIS, PC A04/MF A01; 1; GPO Dep. File Number DE86009399.

From 29. Scottish Universities summer school in physics: laser plasma interactions; St. Andrews, Scotland (28 Jul 1985).

Non-ideal plasma equation of state, radiative cross-sections and energy exchange coefficients are described in a tutorial overview.

33314 Modification of lower-hybrid current ramp-up by runaways. Chan, V.S.; Liu, C.S.; Lee, Y.C. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* **29**: No. 6, 1900-1907(Jun 1986). Contract AC03-84ER53158.

Runaway effects on lower-hybrid current ramp-up are studied numerically using a two-dimensional Fokker—Planck analysis and a nonlinear circuit equation. Runaway contribution to the inductance is shown to be important in limiting the magnitude of the induced electric field. This tends to reduce the current ramp-up efficiency. However, for a range of ω/sub p//Ω, the anomalous Doppler instability can be excited and the runaway production rate as well as the associated inductance is significantly reduced when that happens. This allows the ramp-up efficiency to be further increased.

33315 Helical axis stellarator equilibrium and resistive ballooning. Depassier, M.C.; Cooper, W.A. (Facultad de Fisica, Universidad Catolica de Chile, Casilla 114-D, Santiago, Chile). *Physics of Fluids;* **29**: No. 6, 1948-1958(Jun 1986).

An approximate analytic solution of the magnetohydrodynamic (MHD) equilibrium equation for large-aspect-ratio, helically symmetric systems is obtained. The resistive ballooning stability of these equilibria is studied numerically and analytically. We find that the ballooning modes scale as the resistivity to the third power. They are driven by the helical nature of the magnetic axis and by the elliptic distortion of the flux surfaces away from a circle.

33316 Radio frequency breakdown and electron confinement time in a stellarator. Wroblewski, D.; Shohet, J.L. (The University of Wisconsin, Torsatron/Stellarator Laboratory, Madison, Wisconsin 53706). *Physics of Fluids;* **29**: No. 6, 1979-1984(Jun 1986). Contract AC02-84ER53166.

Radio frequency (f = 350 kHz) inductive breakdown has been studied in a toroidal stellarator. The time delay between the application of the radio frequency pulse and the buildup of detectable plasma density is measured as a function of the discharge parameters. It is shown that the confinement time of energetic electrons (~100 eV), produced during the breakdown, may be deduced from the breakdown characteristics. The experimentally determined confinement times are compared with predictions of neoclassical transport theory and are found to have functional dependence on the discharge parameters approximately consistent with plateau scaling, but to be shorter than predicted by the neoclassical diffusion model.

33317 Renormalized turbulence theory of ion pressure gradient driven drift modes. Hong, B.; Choi, D.; Horton W. Jr. (Department of Physics, Korea Advanced Institute of Science and Technology, P.O. Box 150 Cheongryangni, Seoul, Korea). *Physics of Fluids;* **29**: No. 6, 1872-1880(Jun 1986). Contract FG05-80ET53088.

From the nonlinear gyrokinetic equation we formulate the renormalized turbulence equation for the eta/sub i/ -mode drift wave instability. The study shows that the dominant nonlinear damping mechanism is from the E x B convection of the pressure fluctuation and that the kinetic modifications to the fluid E x B mode coupling, studied earlier, shift the spectrum toward the shorter wavelengths. Balancing the linear growth rate with the nonlinear damping rate at the linearly most unstable region, we calculate the anomalous ion thermal conductivity, which exceeds the neoclassical plateau formula and gives a value of the same order as that previously computed by Horton, Choi, and Tang [Phys. Fluids 26, 1077 (1981)], but with a kinetic enhancement factor. Also, the thermal conductivity formula remains finite for vanishing density gradient.

33318 Reply to comments of Catto and Myra. Shaing, K.C. (Oak Ridge National Laboratory, P. O. Box Y, Oak Ridge, Tennessee 37831). *Physics of Fluids;* **29**: No. 6, 2021-2021(Jun 1986). Contract AC05-84OR21400.

If tau/sub a/ << tau/sub D/, where tau/sub a/(tau/sub D/) is the relaxation time for the radial electric field (plasma density and temperature), a unique, stable value of the radial electric field is determined on the time scale tau/sub a/ << tau << tau/sub D/.

33319 Influence of resistivity on energetic trapped particle-induced internal kink modes. Biglari, H.; Chen, L. (Department of Astrophysical Sciences and Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* **29**: No. 6, 1760-1764(Jun 1986). Contract AC02-76CH03073.

The influence of resistivity on energetic trapped particle-induced internal kink modes, dubbed "fishbones" in the literature, is explored. A general dispersion relation, which recovers the ideal theory in its appropriate limit, is derived and analyzed. An important implication of the theory for present generation fusion devices such as the Joint European Torus [Plasma Physics and Controlled Nuclear Fusion Research (IAEA, London, 1984), Vol I, p.11] is that they will be stable to fishbone activity.

33320 Growth of phase space holes near linear instability. Dupree, T.H. (Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **29**: No. 6, 1813-1819(Jun 1986).

Previous calculations of hole growth in a one-dimensional electron—ion plasma are extended to a greater range of parameter space including the region around linear instability. The effect of the ion-acoustic resonance on hole growth is analyzed and the relationship to linear instability is discussed. Agreement with computer simulations is much improved. Energy and momentum conservation are discussed and proved for both holes and waves.

33321 Semicollisional drift-tearing modes in toroidal plasmas. Hahm, T.S.; Chen, L. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712-1068). *Physics of Fluids;* **29**: No. 6, 1891-1899(Jun 1986). Contract AC02-76CH03073.

Semicollisional drift-tearing modes are studied analytically in toroidal plasmas. Corresponding differential equations for the eigenmodes are derived via the ballooning mode representation and flux-surface averaging. A dispersion relation is then obtained using asymptotic matching. It is found that the stabilizing effects of good average curvature and finite plasma compression lead to a tearing instability threshold Δ/sub c/, which is independent of the resistivity.

33322 Oscillation center theory and ponderomotive stabilization of low-frequency plasma modes. Similon, P.L.; Kaufman, A.N.; Holm, D.D. (Lawrence Berkeley Laboratory and Physics Department, University of California, Berkeley, California 94720). *Physics of Fluids;* **29**: No. 6, 1908-1922(Jun 1986).

Nonlinear, nondissipative ponderomotive theory is developed in relation to recent experimental results showing that externally imposed rf fields can stabilize an axisymmetric mirror plasma. First, the ponderomotive force problem is reexamined, with emphasis on self-consistency of the interaction between the plasma and high-frequency field. The averaged action principle for the antenna—plasma system yields self-consistent plasma and electromagnetic field dynamics on the oscillation-center time scale. The plasma equilibrium condition is expressed as a balance among plasma and magnetic pressure forces, including interchange, ponderomotive, and magnetization forces. Next, the spectral stability of such static equilibria is studied in the low-frequency magnetohydrodynamic (MHD) approximation, with a ΔW principle that incorporates the various ponderomotive contributions: particle effects, magnetization effects, and self-consistent adjustment of the rf field resulting from displacements of the plasma away from equilibrium. The ponderomotive potential energy functional is related to the antenna inductance and antenna current amplitude. Finally, the noncanonical Hamiltonian formulation for the system's dynamics is given, in terms of Eulerian fields. It allows the construction of nonlinearly conserved functionals, which yield criteria for linearized Lyapunov stability, for both multifluid and MHD models. The Lyapunov stability conditions are related to the modified ΔW variational principle.

33323 **Stability of compact-torus ion-ring hybrid systems to magnetohydrodynamic tilt and shift modes.** Turnbull, A.D.; Sudan, R.N. (Laboratory of Plasma Studies, Cornell University, Ithaca, New York 14853). *Physics of Fluids;* **29**: No. 6, 1923-1938(Jun 1986). Contract AC02-76ET53065.

The low-frequency stability of a compact-torus ion-ring hybrid configuration, in which part of the toroidal current is carried by a ring of high-energy ions, is studied. In particular, the magnetohydrodynamic (MHD) tilt and radial shift instabilities in spheromak-like hybrid systems are considered. The ion ring has a stabilizing effect on the tilt mode, through its modification of the magnetic geometry. For the shift mode, the stabilization is dynamic for moderate elongation, but is again geometrical in the limit of large elongation. For moderate elongation, it is found that a high-energy ion component substantially enhances stability against the MHD shift mode.

33324 **Nonlinear saturation of the absolute stimulated Raman scattering instability in a finite collisional plasma.** McKinstrie, C.J.; Simon, A. (Laboratory for Laser Energetics and Department of Mechanical Engineering, University of Rochester, 250 East River Road, Rochester, New York 14623-1299). *Physics of Fluids;* **29**: No. 6, 1959-1970(Jun 1986). Contract FC08-85DP40200.

Using multiple time scale analysis, the nonlinear saturation of the absolute stimulated Raman scattering instability is examined in a finite homogeneous collisional plasma. The amplitude of the incident wave is assumed to exceed the absolute instability threshold by the fractional amount $\Delta(<<1)$. A single backscattered wave and a single plasma wave grow until time-asymptotic saturation occurs. The reflected light intensity is determined analytically and is proportional to Δ. The spatial variation of the saturated wave amplitudes is also obtained. The reflected intensity is compared to the values predicted for the convective instability, for incident intensities which are marginally less than the absolute threshold intensity. In "short" plasmas, i.e., ones which extend over only a few linear convective gain lengths, the reflected light intensity is found to be much higher when the absolute instability is excited.

33325 **Particle confinement and the anomalous Doppler instability during combined inductive and lower-hybrid current drive.** Luckhardt, S.C.; Chen, K.; Mayberry, M.J.; Porkolab, M.; Terumichi, Y.; Bekefi, G.; McDermott, F.S.; Rohatgi, R. (Plasma Fusion Center and Research Laboratory of Electronics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **29**: No. 6, 1985-1993(Jun 1986). Contract AC02-78ET51013.

Increases in average density have been observed during lower-hybrid current-drive experiments (LHCD) on the Versator II tokamak [Phys. Rev. Lett. 48, 152 (1982)], and on other LHCD experiments where inductive-Ohmic and lower-hybrid current drive are combined. In the present experiment it is found that this density increase is the result of an improvement in global particle confinement time tau/sub p/ in comparison to purely Ohmic discharges with similar plasma parameters. Furthermore, it is found that the improved confinement deteriorates when the anomalous Doppler relaxation instability of the anisotropic high-energy electron tail becomes unstable during LHCD, and the loss rate of tail electrons increases. However, energetic electron losses alone are at least an order of magnitude too small to explain this deterioration in particle confinement.

33326 **Large amplitude ion holes.** Dupree, T.H. (Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *Physics of Fluids;* **29**: No. 6, 1820-1827(Jun 1986).

Earlier work [Phys. Fluids 25, 277 (1982); Phys. Fluids 26, 2460 (1983)] on the structure and growth of phase space density holes for psi = -q/sub i/phi/T/sub i/<1 is extended to psi>1. As in the psi<1 case, it is found that reflecting electrons cause the ion holes to decelerate and grow, although the details are quite different. The reflected electrons cause the formation of a so-called "double layer." It is shown that isolated (intermittent) ion holes or wave packets can grow to much larger amplitudes than that predicted by the conventional quasilinear plateau limitation or Manheimer's [Phys. Fluids 14, 579 (1971)] trapping criteria.

33327 **Electromagnetic solitary vortices in a rotating plasma.** Liu, J.; Horton, W. (Department of Physics and The Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712). *Physics of Fluids;* **29**: No. 6, 1828-1835(Jun 1986). Contract FG05-80ET53088.

The nonlinear equations describing drift-Alfven solitary vortices in a low β, rotating plasma are derived. Two types of solitary vortex solutions along with their corresponding nonlinear dispersion relations are obtained. Both solutions have the localized coherent dipolar structure. The first type of solution belongs to the family of the usual Rossby or drift wave vortex, while the second type of solution is intrinsic to the electromagnetic perturbation in a magnetized plasma and is a complicated structure. While the first type of vortex is a solution to a second-order differential equation the second one is the solution of a fourth-order differential equation intrinsic to the electromagnetic problem. The fourth-order vortex solution has two intrinsic space scales in contrast to the single space scale of the previous drift vortex solution. With the second short scale length the parallel current density at the vortex interface becomes continuous. As special cases the rotational electron drift vortex and the rotational ballooning vortex also are given.

33328 **Finite-Larmor-radius dispersion functional for the Vlasov-fluid model.** Lewis, H.R. (Los Alamos National Laboratory, MS-F642, Los Alamos, New Mexico 87545). *Physics of Fluids;* **29**: No. 6, 1860-1871(Jun 1986).

A dispersion functional for the Vlasov-fluid model is derived as a finite-Larmor-radius (FLR) expansion in which the eigenfrequency is not assumed to be small compared to the ion gyrofrequency and secularities in the gyrophase angle never occur. The expansion is carried out in the local $E_0 \times B_0$ drift frame. Use of the dispersion functional for calculating the small-signal response of a plasma is compared to using an approximate dispersion differential equation. The linearized Vlasov-fluid model is examined with particular reference to the questions of treating the initial-value problem correctly and specifying a generally valid gauge condition. Calculational details for applying the dispersion functional to a general linear screw pinch are presented.

33329 **A generalized reduced fluid model with finite ion-gyroradius effects.** Hsu, C.T.; Hazeltine, R.D.; Morrison, P.J. (Institute for Fusion Studies, The University of Texas, Austin, Texas 78712). *Physics of Fluids;* **29**: No. 5, 1480-1487(May 1986). Contract FG05-80ET53088.

Reduced fluid models have become important tools for studying the nonlinear dynamics of plasma in a large aspect-ratio tokamak. A self-consistent nonlinear reduced fluid model, with finite ion-gyroradius effects is presented. The model is distinctive in being correct to O((rho/sub i//a)^2) and in satisfying an exact, relatively simple energy conservation law.

33330 **Toroidal viscosity and ambipolarity in the neoclassical transport theory of axisymmetric tori.** Catto, P.J. (Science Applications International Corporation, Plasma Research Institute, 1515 Walnut Street, Boulder, Colorado 80302). *Physics of Fluids;* **29**: No. 5, 1587-1601(May 1986). Contract AC03-76ET53057.

To self-consistently evaluate both the toroidal rotation and the radial electric field in a tokamak the two distinct constraints of toroidal angular momentum conservation and ambipolarity must be invoked. A gyrokinetic derivation of the neoclassical transport equations that permits a large toroidal rotation speed is employed. Explicit forms for the toroidal viscosity are obtained so that both constraints can be imposed. To keep the E x B drift speed smaller than the ion thermal speed and still consider large toroidal rotation, the ratio of the poloidal to toroidal magnetic field components is assumed to be small. For larger poloidal fields the derivation is restricted to small rotation. In general, it is also found necessary to retain the poloidal variations in the electrostatic potential and density. A tokamak plateau regime calculation is performed using the general formulation and illustrates the importance of retaining finite poloidal gyroradii effects.

33331 Ion viscosity stabilization of resistive internal kink modes. Porcelli, F.; Migliuolo, S. (Scuola Normale Superiore, Pisa, Italy and Massachusetts Institute of Technology, Cambridge,Massachusetts 02139). *Physics of Fluids;* **29**: No. 5, 1741-1743(May 1986). Contract AC02-78ET51013.

The linear stability theory of resistive $m^0 = 1$ internal kink modes is presented, including the effects of finite electron drift frequency, finite ion Larmor radius, and ion viscosity. Analytic and numerical computations are used to show that moderate values of the ion viscosity parameter are sufficient to stabilize the resistive internal kink mode.

33332 Statistical properties and correlation functions for drift waves. Horton, W. (Institute for Theoretical Physics, University of California, Santa Barbara, California 93106; Department of Physics, University of Texas, Austin, Texas 78712). *Physics of Fluids;* **29**: No. 5, 1491-1503(May 1986). Contract FG05-80ET53088.

The dissipative one-field drift wave equation is solved using the pseudospectral method to generate steady-state fluctuations. The fluctuations are analyzed in terms of space-time correlation functions and modal probability distributions. Nearly Gaussian statistics and exponential decay of the two-time correlation functions occur in the presence of electron dissipation, while in the absence of electron dissipation long-lived vortical structures occur. Formulas from renormalized, Markovianized statistical turbulence theory are given in a local approximation to interpret the dissipative turbulence.

33333 Electromagnetic hot plasma modes in a dense plasma near the second harmonic electron-cyclotron frequency. Matsuda, K. (GA Technologies Inc., San Diego, California 92138). *Physics of Fluids;* **29**: No. 5, 1602-1607(May 1986). Contract AC03-84ER53158.

Obliquely propagating electromagnetic hot plasma modes near the second harmonic electron-cyclotron frequency have been studied for a plasma of density around the cutoff density of the ordinary mode using the nonrelativistic dispersion equation. There are several branches of new electromagnetic hot plasma modes in the frequency region of 5% to 20% less than the second harmonic frequency. They are quite similar to the new modes near the fundamental frequency reported recently. There are two branches of the extraordinary mode. At the limit of small perpendicular wavenumber, one of the branches becomes a right wave of the hot plasma dispersion, and the other becomes either a left wave or a plasma wave.

33334 Parabolic approximation method for fast magnetosonic wave propagation in tokamaks. Phillips, C.K.; Perkins, F.W.; Hwang, D.Q. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *Physics of Fluids;* **29**: No. 5, 1608-1619(May 1986). Contract AC02-76CH03073.

Fast magnetosonic wave propagation in a cylindrical tokamak model is studied using a parabolic approximation method in which poloidal variations of the wave field are considered weak in comparison to the radial variations. Diffraction and wave interference effects, which are ignored by ray tracing methods, are included self-consistently using the parabolic method since continuous solutions for the wave electromagnetic fields are computed directly from an approximate form of the wave equation. Numerical results are presented which illustrate the cylindrical convergence of the launched waves into a diffraction-limited focal spot on the cyclotron absorption layer near the magnetic axis for a wide range of plasma confinement parameters.

33335 Analytic theory of the nonlinear m = 1 tearing mode. Hazeltine, R.D.; Meiss, J.D.; Morrison, P.J. (Institute for Fusion Studies, The University of Texas at Austin, Austin, Texas 78712-1068). *Physics of Fluids;* **29**: No. 5, 1633-1639(May 1986). Contract FG05-80ET53088.

Numerical studies show that the m = 1 tearing mode continues to grow exponentially well into the nonlinear regime, in contrast with the slow, "Rutherford," growth of m>1 modes. A single helicity calculation is presented which generalizes that of Rutherford [Phys. Fluids 16, 1903 (1973)] to the case when the constant-psi approximation is invalid. As in that theory, the parallel current becomes an approximate flux function when the island size W exceeds the linear tearing layer width. However, for the m = 1 mode, W becomes proportional to δB, rather than (δB)¹/sup //³ above this critical amplitude. This implies that the convective nonlinearity in Ohm's law, which couples the m = 0 component to the m = 1 component, dominates the resistive diffusion term. The balance between the inductive electric field and this convective nonlinearity results in exponential growth. Assuming the form of the perturbed fields to be like that of the linear mode, we find that growth occurs at 71% of the linear rate.

33336 Generation of high magnetic fields using a gas-puff Z pinch. Wessel, F.J.; Felber, F.S.; Wild, N.C.; Rahman, H.U.; Fisher, A.; Ruden, E. (JAYCOR, P. O. Box 85154, San Diego, California 92138-9259). *Applied Physics Letters;* **48**: No. 17, 1119-1121(28 Apr 1986). Contract FG03-84ER13302.

The imploding plasma column of a gas-puff Z pinch was used to compress an embedded axial magnetic field. Field compression ratios up to 180 times and peak compressed fields up to 1.6 MG were measured by Faraday rotation. Field compression by this method has the advantage of high repetition rate for applications in the controlled production of high-energy densities, solid-state studies, generation of short-wavelength radiation, reducing the ignition threshold for fusion, and particle acceleration.

33337 Consequences of time-reversal symmetry for the electric field scaling of transport in stellarators. Hirshman, S.P.; Shaing, K.C.; van Rij, W.I. (Fusion Energy Division, Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *Physical Review Letters;* **56**: No. 16, 1697-1699(21 Apr 1986). Contract AC05-84OR21400.

Most three-dimensional fusion-plasma—confinement geometries possess symmetric magnetic fields satisfying B(theta,ξ) = B(-theta,-ξ) where theta and ξ are poloidal and toroidal flux coordinate angles, respectively. For such configurations with large aspect ratios, the time-reversal symmetry of the collisionless orbits is sufficient to prove that the local diffusion coefficient, D(E/sub r/), is independent of the sign of the radial electric field, E/sub r/. Consequences of this property for neutral-beam injection and for generic root-jumping models for stellarators are discussed.

33338 High-order spline interpolations in the particle simulation. Abe, H.; Sakairi, N.; Itatani, R.; Okuda, H. (Department of Electronics, Kyoto University, Kyoto 606, Japan). *Journal of Computational Physics;* **63**: No. 2, 247-267(Apr 1986). Contract AC02-76CH03073.

In the conventional plasma simulation models using particles, in which the total momentum is conserved, the total energy is not conserved due to nonuniformity of space caused by the spatial grids. The grid spacing has been severely limited of order of the Debye length. It is found that the use of the high-order spline spatial interpolation removes this limit without a significant increase of the computation and complexity of the algorithm in the system that only the long-wavelength, collective phenomena are important. The theoretical analysis of the total energy is improved compared with the previous work and its scaling law is related to the so-called aliasing error explicitly. The coefficient eta introduced previously is referred as the model index and is used again as a measure of the accuracy of the models for the energy conservation.

33339 Implicit moment electromagnetic plasma simulation in cylindrical coordinates. Wallace, J.M.; Brackbill, J.U.; Forslund, D.W. (Applied Theoretical Physics Division, Los Alamos National Laboratory, Los Alamos, New Mexico 87545). *Journal of Computational Physics;* **63**: No. 2, 434-457(Apr 1986).

An electromagnetic PIC plasma simulation code incorporating the implicit moment method and a two-dimensional cylindrical mesh, with r- and z-coordinate dependence, has been developed. The code is an extension of the VENUS code from the original two-dimensional Cartesian mesh. The physical model employed in the code will be discussed, with emphasis on aspects unique to cylindrical geometry. An application to self-generated magnetic fields

and electron transport in a laser-irradiated disk is presented that highlights the usefulness of cylindrical coordinates.

33340 A high-pressure ^{3}He gas scintillation neutron spectrometer. Derzon, M.S.; Slaughter, D.R.; Prassin, S.G. (Dept. of Nuclear Eng., Univ. of California, Berkeley, CA 94720). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—).

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

A high-pressure, ^{3}He-Xe gas scintillation spectrometer has been developed for neutron spectroscopy on D-D fusion plasmas. The spectrometer exhibits an energy resolution of (121 +- 20 keV) keV (FWHM) at 2.5 MeV and an efficiency of (1.9 +- 0.4) x 10^{-3} $(n/cm^2)^{-1}$. The contribution to the resolution (FWHM) from counting statistics is only (22 +- 3 keV) keV and the remainder is due predominantly to the variation of light collection efficiency with location of neutron events within the active volume of the detector.

33341 Observation of the 16.7 MeV D-T fusion gamma using a GaS Cerenkov detector. Ladish, J.S.; Toevs, J.W.; Young, C.S.; Nash, P.; Iversen, S.; Zagarino, P.; Jennings, L.; Seno, R.D. (Los Alamos National Lab., P.O. Box 1663, P-14 MS D410, Los Alamos, NM 87545). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—).

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

A measurement of the 16.7 MeV gamma production in a D-T fusion plasma was performed, using a four channel carbon dioxide gas Cerenkov detector system to measure the Cerenkov light generated by the gamma conversion electrons produced in a thin aluminum foil.

33342 Tokamak Fusion Test Reactor neutron source strength measurements instrumentation and results. Hendel, H.W. (Princeton Plasma Physics Lab., Princeton, NJ 08544). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—).

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

The Tokamak Fusion Test Reactor (TFTR) at Princeton University has been designed 1) to reach power break-even, Q ≃ 1 (Q = fusion power/heating power), in neutral-beam-injected, two-energy-component D-T plasmas, where the density confinement time requirement is less stringent than that for maxwellian, one-energy-component plasmas, and 2) to provide the physics understanding of reactor-like plasmas required for the development of tokamak reactors. TFTR has now been in operation for more than two years. Nearly 15,000 individual high power plasma discharges have been produced. Deuterium plasmas with ohmic heating currents up to 2.5 MA, deuterium neutral beam injection (NBI) with beam powers up to 6.3 MW (28 MW projected for 1986) and 80 KeV energy (120 KeV projected), deuterium pellet injection and adiabatic deuterium plasma compression have been investigated. The neutron source strength of a fusion plasma is a direct indicator of the fusion power generated. However, its measurement is complicated for a number of reasons. 1) The neutron source is extended and time varying. 2) It is surrounded by large, fixed scatterers near both source and detectors. 3) The dynamic range of interest in present experiments covers some ten orders of magnitude. In Section II the authors discuss briefly the plasma, its properties, the detectors, their useful ranges and limitations and their calibration. Section II contains some of the neutron measurement results obtained so far.

33343 Time resolved neutron spectrum measurements at the mirror fusion test facility. Slaughter, D. (Univ. of California, Lawrence Livermore National Lab., P.O. Box 808, L-405, Livermore, CA 94550). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—). Contract W-7405-ENG-48.

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

An advanced neutron diagnostic system has been developed for spectrum measurements on MFTF. Its collimated field of view allows spatially resolved neutron spectrum measurements. The 10 Mhz pulse height analysis and particle identification capability allow spectrum measurements in intervals as short as 10 ms. These capabilities will be used for space and time resolved determinations of ion energy from measurements of neutron Doppler width.

33344 Antenna analysis and boundary conditions for Alfven wave studies in tokamaks. Ross, D.W.; Li Yanming; Mahajan, S.M.; Michie, R.B. (Texas Univ., Austin, USA. Fusion Research Center). *Nuclear Fusion;* **26**: No. 2, 139-149(Feb 1986).

Previous studies of Alfven wave heating which employed kinetic theory are extended in order to take into account antenna configurations, in cylindrical geometry, consisting of arbitrary shell currents and their associated radial feeders. For each Fourier component of the form exp [-i(lzeta-mtheta)], the shell current consists of a divergence-free part having the helicity of the mode (l, m), plus an orthogonal part requiring the feeders. It is shown, both analytically and by including the full current in the numerical code, that only the divergence-free part of the current contributes significantly to the plasma response and antenna loading. The important effect of the feeders is to cancel the contribution from the surface current perpendicular to the helicity. This explicitly verifies results reported previously.

33345 Doublet III operating regimes with improved energy confinement. DeBoo, J.C.; Burrell, K.H.; Ejima, S.; Kellman, A.G.; Ohyabu, N.; Petrie, T.W.; Schissel, D.P.; Stambaugh, R.D. (GA Technologies, Inc., San Diego, CA, USA). *Nuclear Fusion;* **26**: No. 2, 211-221(Feb 1986).

Over the past three years, extensive energy confinement experiments have been performed on the Doublet III tokamak with up to 8 MW of both hydrogen and deuterium neutral beam heating power. These experiments covered a wide range of plasma parameters and almost a continuum of magnetic configurations from limited to fully diverted. It has been found that the global energy confinement time is linearly proportional to the plasma current and decreases with the application of neutral beam power for all configurations and beam species studied. The majority of our confinement experiments were conducted with discharges limited toward the outside of the vacuum vessel and heated with hydrogen neutral beams. With respect to this standard operating mode, several operating regimes were found with improved values of energy confinement time. Generally, deuterium neutral beam heating is superior to hydrogen beam heating and divertor operation yields superior confinement as compared to limiter operation. Our experiments also indicate that discharges limited toward the inside of the vacuum vessel exhibit somewhat better confinement relative to discharges limited toward the outside. Accordingly, the highest energy confinement values are obtained in high current, well diverted, deuterium beam heated discharges. Deuterium beam heated discharges limited toward the inside yield normalized energy confinement values similar to those from hydrogen beam heated divertor discharges.

33346 Basic principle of constant qsub(a) current buildup in tokamaks. Kikuchi, M. (Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 2, 223-226(Feb 1986).

An analytic expression is derived in which the current profile shape in tokamaks is kept constant during the current buildup phase. The required conductivity profile is parametrized by two externally controllable parameters, I radicalsub(p) and a radicalsub(p), in the case of a Gaussian current profile. It is shown that a Gaussian current profile can be maintained, even under the condition of high I radicalsub(p), for a realistically broad conductivity profile by using the constant qsub(a) current buildup method.

33347 **Diagnosis of mildly relativistic electron distributions by cyclotron emission.** Hutchinson, I.H.; Kato, K. (Massachusetts Inst. of Tech., Cambridge, USA. Plasma Fusion Center). *Nuclear Fusion;* **26**: No. 2, 179-191(Feb 1986).

It is shown that electron cyclotron emission can be used for detailed diagnosis of mildly relativistic electron distribution functions, provided the plasma can be viewed along a line of constant magnetic field. Calculations of the emissivity are performed, both for tenuous and finite-background-density plasmas whose results allow observations of emission to be deconvolved in terms of the density and anisotropy of the distribution as a function of total electron energy. For prolate distributions different harmonics have to be measured, while for oblate distributions different polarizations have to be measured. Absorption can also be treated using these results. Some of the issues concerning experimental application are discussed.

33348 **Measurement of thermal transport by synchronous detection of modulated electron heating in the Doublet III tokamak.** Jahns, G.L.; Wong, S.K.; Prater, R.; Lin, S.H.; Ejima, S. (GA Technologies, Inc., San Diego, CA, USA). *Nuclear Fusion;* **26**: No. 2, 226-231(Feb 1986).

The power from 60 GHz gyrotrons was square-wave modulated to produce periodic temperature perturbations in a Doublet III discharge. The modulated component of the resulting soft-X-ray signals was isolated by digital processing and synchronous detection using the modulation as reference. The phase shift of the signals as a function of radius agrees well with a model calculation based on the heat balance equation, allowing thermal diffusivity to be determined and demonstrating the efficacy of this technique.

33349 **Toroidal heliac equilibrium.** Strauss, H.R.; Monticello, D.; Park, W. (New York Univ., NY, USA. Courant Inst. of Mathematical Sciences; Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 2, 163-169(Feb 1986).

An expansion method is developed for long-wavelength heliac and stellarator equilibrium. Time-dependent equations of motion are solved numerically to give equilibria which can include magnetic islands and stochastic field regions. Analytic low-beta equilibria are found which are in good agreement with computations.

33350 **Zero-dimensional study of the compression of low-temperature spheromaks.** Meyerhofer, D.D.; Hulse, R.A.; Zweibel, E.G. (Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 2, 235-241(Feb 1986).

Compression of low-temperature spheromak plasmas has been studied with the aid of a zero-dimensional two-fluid computer code. The major direct effect of compression is to raise the current and plasma densities, keeping their ratios constant. Above critical pre-compression values of the electron temperature, Tsub(e), and the product of electron density and particle confinement time, nsub(e)tausub(p), the rising plasma density shifts the impurity ions to higher ionization states, with correspondingly lower radiative losses. High post-compression temperatures may thus be achieved. In oxygen radiation-dominated plasmas with pre-compression values above the critical ones, and with constant tausub(p), the electron temperature can be increased by up to a factor of seven for a compression of a factor of two. This can be compared with a factor-of-four temperature rise expected for adiabatic compression. If the energy balance is dominated by particle confinement losses rather than radiation losses, the effect of compression is to raise the temperature as Tsub(e) approx. = Csup(6/5), for constant tausub(p).

33351 **Electromagnetic emission from a neutral-beam-injected plasma.** Bhadra, D.K.; Chiu, S.C.; Buchenauer, D.; Hwang, D. (GA Technologies, Inc., San Diego, CA, USA; Princeton Univ., NJ, USA. Plasma Physics Lab.). *Nuclear Fusion;* **26**: No. 2, 201-209(Feb 1986).

Results obtained from experiments in PDX with neutral beam injection show the emission of several harmonics of a frequency centred in the ion cyclotron frequency range. The structure of the magnetic signals registered is suggestive of an electromagnetic ion cyclotron type instability. A theory is developed for explaining the generation of neutral-beam-driven ion cyclotron instability (ion Bernstein mode) and the results are compared with the experimental data. An increase in beam density towards the outside of the plasma is possible if the beam ion population in that region increases owing to either counter-injection orbits or 'fishbone' effects. A calculation is made of the threshold density necessary to drive such an instability in a plasma with anisotropic beam ion distribution, and the effects due to the curvature drift of hot ions are included. The quasi-linear evolution of the beam is studied in order to understand possible beam isotropization and spreading in velocity space.

33352 **Physics of burn in magnetized deuterium-tritium plasmas: Spherical geometry.** Jones, R.D.; Mead, W.C. (Los Alamos National Lab., NM, USA). *Nuclear Fusion;* **26**: No. 2, 127-137(Feb 1986).

There is a large region of density-temperature space in which the effects of a magnetic field on heat transport and alpha-particle mobility are significant and the magnetic pressure is small compared with the pressure of a deuterium-tritium plasma. Spherical fusion burn in this regime is examined. It is found that for volume burn, magnetic fields can greatly increase the yield. In regimes where propagating burn does not occur, the burn can be enhanced by a magnetic field. In regimes where propagating deflagration would normally occur in the absence of a magnetic field, magnetic fields actually degrade the cross-field propagation. A detonation wave is harder to ignite in the presence of a magnetic field. Once a detonation wave is ignited, no change in the propagation speed is produced by applying a magnetic field.

33353 **Prospects for high power gyrotrons.** Kreischer, K.E.; Danly, B.G.; Saito, H.; Schutkeker, J.B.; Temkin, R.J.; Tran, T.M. (Massachusetts Inst. of Tech., Cambridge, USA. Plasma Fusion Center). *Plasma Physics and Controlled Fusion;* **27**: No. 12A, 1449-1459(Dec 1985). (CONF-8506270—).

From 12. annual conference of Plasma Physics Group of the Institute of Physics; Glasgow, UK (26 Jun 1985).

The prospects for electron cyclotron resonance heating (ECRH) and high power, high frequency gyrotrons are examined. Recent experimental and theoretical progress at MIT on the development of gyromontrons and gyroklystrons is described. It is shown that CW gyrotrons capable of MW powers and high efficiency are consistent with the technological constraints of the device. The design parameters of 1 and 10 MW, 120 GHz monotrons are given. An ECRH system based on such RF sources is described and compared with alternative plasma heating techniques.

33354 **Nonlinear theory of large-mode-number ballooning modes in fully toroidal geometry.** Mondt, J.P.; Weiland, J. (Los Alamos National Lab., NM, USA; Chalmers Univ. of Tech., Goeteborg, Sweden. Inst. for Electromagnetic Field Theory and Plasma Physics). *Journal of Plasma Physics;* **34**: 143-161(Aug 1985).

A nonlinear model equation describing ballooning modes for β of the order of the inverse aspect ratio and including magnetic shear is derived. For the special case of circular concentric flux surfaces, we obtain an approximate dispersion relation, including finite Larmor radius effects, and show the possibility of explosive instability in the nonlinear regime. The results are shown to remain valid in the presence of a low-density hot-ion constituent.

33355 **Electromagnetic solitary waves in magnetized plasmas.** Hazeltine, R.D.; Holm, D.D.; Morrison, P.J. (Texas Univ., Austin, USA. Inst. for Fusion Studies; Los Alamos National Lab., NM, USA; Texas Univ., Austin, USA. Dept. of Physics). *Journal of Plasma Physics;* **34**: 103-114(Aug 1985).

A Hamiltonian formulation, in terms of a non-canonical Poisson bracket, is presented for a nonlinear fluid system that includes reduced magnetohydrodynamics and the Hasegawa-Mima equation as limiting cases. One class of steady-state solutions is shown to provide a simple electromagnetic generalization of drift-solitary waves.

33356 **Stellarator to fusion plasma confinement.** Harris, J.H. (Oak Ridge National Lab., TN). *Energy Technology (Washington, D.C.);* **12**: 1082-1094(Aug 1985). (CONF-850301—). Contract AC05-84OR21400.

From 12. annual energy technology conference and exposition; Washington, DC, USA (25 Mar 1985).

The stellerator is a toroidal fusion plasma confinement device with nested magnetic flux surfaces, which offers the prospect of steady-state operation without plasma current. The required twist of the field lines is produced by external helical coils rather than by plasma current. The results achieved at Japanese and West German laboratories have made stellarator devices second only to tokamaks in progress toward fusion plasma conditions. The Advance Toroidal Facility (ATF) under construction at Oak Ridge National Laboratory and scheduled to operate in 1986 represents a significant advance. The ATF torsatron has been designed to operate steady state at high beta with good transport properties and to have sufficient flexibility to explore a wide variety of toroidal configurations, thereby contributing to the development of toroidal fusion reactors. 19 references, 3 figures.

33357 **Effects of Alfven Wave Heating on both confinement and impurities.** de Chambrier, A.; Collins, G.A.; Joye, B.; Lister, J.B.; Moret, J.; Nowak, S. (Association Euratom-Confederation Suisse, Centre de Recherches en Physique des Plasmas, EPFL 21, av. des Bains, CH-10007 Lausanne/ Switzerland). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 8-11(Jul 1985). (CONF-8505130—).

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Experiments on Alfven Wave Heating are being carried out on TCA at a power level up to the ohmic heating power, and with a pulse length of 30-60 msec. The applied frequency is 2.5 MHz. There is substantial heating of both electrons and ions, and a detailed power balance suggests that the heating rate is comparable with the RF power delivered by the antennae. There is a large increase in plasma density during the RF, which can reach +300% in some conditions. This density increase is insensitive to the machine conditioning. There is an increase in the radiated power loss from the plasma centre without the lateral screens, and we show that this is independent of the number of antennae used.

33358 **ICRF heating experiments on the PLT tokamak.** Wilson, J.R. (Princeton Plasma Physics Laboratory, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 28-31(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The PLT ICRF heating program is exploring the stability, confinement and heating properties of ICRF as applied to the PLT plasma. In the deuterium majority, ^{3}He minority mode a T/sub d/ = 5 keV, n-bar/sub e/ = 3.7 x 10^{13} cm^{-3}, E>100 kJ plasma has been obtained with the application of 4.25 MW of coupled ICRF power. In the deuterium majority, hydrogen minority regime direct second harmonic majority heating has been observed. Optimization studies including pellet injection are underway. Experiments with direct ion Bernstein wave (IBW) heating in both the minority heating regime and single ion regime are underway.

33359 **New concepts for drift pumping a thermal barrier with RF.** Barter, J.D.; Baldwin, D.; Chen, Y.; Poulsen, P. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 36-39(Jul 1985). (CONF-8505130—). Contract W-7405-ENG-48.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

New concepts for drift pumping a thermal barrier with RF in TMX device are proposed.

33360 **Fast wave current drive.** Goree, J.; Ono, M.; Colestock, P.; Horton, R.; McNeill, D.; Park, H. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 65-66(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Experiments on the fast wave in the range of high ion cyclotron harmonics in the ACT-1 device show that current drive is possible with the fast wave just as it is for the lower hybrid wave, except that it is suitable for higher plasma densities. A 140° loop antenna launched the high ion cyclotron harmonic fast wave [ω/Ω = O(10)] into a He^+ plasma with n/sub e/≅4 x 10^{12} cm^{-3} and B = 4.5 kG. Probe and magnetic loop diagnostics and FIR laser scattering confirmed the presence of the fast wave, and the Rogowski loop indicated that the circulating plasma current increased by up to 40A with 1 kW of coupled power, which is comparable to lower hybrid current drive in the same device with the same unidirectional fast electron beam used as the target for the RF. A phased antenna array would be used for FWCD in a tokamak without the E-beam.

33361 **Comparison of bounce-averaged quasilinear theory with charge exchange measurements during minority fundamental and majority second harmonic ICRF heating in PLT.** Hammett, G.W.; Colestock, P.L.; Gammel, G.; Goldston, R.J.; Hosea, J.C.; Hwang, D.Q.; Kaita, R.; Ono, M.; Roquemore, L.; Wilson, J.R. (Princeton University, Plasma Physics Laboratory, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 67-70(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Previous studies in PLT using charge-exchange, edge probe, and fusion product diagnostics all indicate that ICRF tends to produce energetic trapped particles whose banana tips are near the resonance layer. A bounce-averaged quasilinear operator which predicts this "resonance localization" has been implemented in a Fokker-Planck code in order to make detailed comparisons with measurements. Good agreement is found with data from the horizontally-scanning, mass-resolving, charge-exchange analyzer, although the RF power profile seems to be broader than expected. We have recently observed a deuterium tail during hydrogen minority heating. The shape of this tail and its scaling with RF power agree well with the quasilinear theory. These measurements indicate that as much as 30% of the central RF power goes into direct second harmonic deuterium heating.

33362 **Resonance localization in tokamaks excited with ICRF waves.** Kerbel, G.D.; McCoy, M.G. (National Magnetic Fusion Energy Computer Center, Lawrence Livermore National Laboratory). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 75-78(Jul 1985). (CONF-8505130—). Contract W-7405-ENG-48.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

A bounce averaged Fokker-Planck quasilinear computational model which evolves the population of particles on more realistic orbits is developed.

33363 **ICRF heating of passing ions in a thermal barrier tandem mirror.** Molvik, A.W.; Dimonte, G.; Campbell, R.; Barter, J.; Cummins, W.F.; Falabella, S.; Poulsen, P. (Lawrence Livermore National Laboratory, University of California, Livermore, California 94550). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 79-82(Jul 1985). (CONF-8505130—). Contract W-7405-ENG-48.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

ICRF heating of the TMX-U central cell in two limits, isotropic and anisotropic, is reevaluated.

33364 The MICADO-A Multi-ion species confinement analysis code for ICRF and IBW heating experiments. Ono, M.; Colestock, P.; Wilson, J.R.; Bell, R.; Bitter, M.; Cavallo, A.; Hammett, G.; Hosea, J.; Hwang, D.; Kaita, R. (Princeton University, Plasma Physics Laboratory, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 83-86(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

A multi-ion species confinement analysis code (MICADO) has been developed for the PLT ICRF and Ion Bernstein Wave (IBW) heating experiments. For ICRF heating, the power is assumed to be absorbed by a minority ion species whose velocity distribution is determined using a one-dimensional velocity space diffusion equation in a multi-ion species background plasma. For the IBW heating, the power deposition profile is obtained from a ray-tracing calculation. The power is absorbed by the perpendicular-component of the heated ion species which produces an effective T/sub perpendicular/. The power flow into electrons and various ion species (including impurity ions) are calculated in each spatial grid. The self-consistent one-dimensional ion energy transport equations are solved for each ion species using an iterative procedure. The modeling code is found to agree well with many of the ion heating features observed in the PLT ICRF and IBW heating experiments.

33365 Role of ion Bernstein waves in ICRF experiments. Skiff, F.; Ono, M.; Wong, K.L. (Princeton University). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 91-95(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The influence of the ion Bernstein wave, both parasitic and direct, on wave excitation in the ion cyclotron frequency range is presented. Excitation of ion Bernstein waves from electromagnetic loop antennas polarized to produce either B_0 or B/sub z/ is sstudied both in theory and experiment. Local analysis is applied to the Maxwell equations to include the effect of a density gradient which has a scale length comparable to the wavelength. The antenna is composed from a Fourier sum in the directions transverse to the gradient. Results of experiments on the ACT-I research torus are presented for comparison with theory. Both linear and parametric excitation are observed. In each case the excitation process is studied over a range of plasma density, and wave frequency and parallel wavenumber.

33366 Fast magnetosonic wave propagation and absorption in Tokamaks. Phillips, C.K.; Perkins, F.W.; Hwang, D.Q. (Plasma Physics Laboratory, Princeton University). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 99-102(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Fast magnetostatic wave propagation and absorption in a tokamak model consisting of an axially symmetric cylindrical plasma column with a radially varying density profile is considered.

33367 Energy confinement studies of lower hybrid current driven discharges in the Alcator C tokamak. Knowlton, S.; Bonoli, P.; Fiore, C.; McCool, S.; McDermott, S.; Porkolab, M.; Takase, Y.; Texter, S. (Plasma Fusion Center, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 122-130(Jul 1985). (CONF-8505130—). Contract AC02-78ET51013.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The energy confinement properties of purely RF-driven plasmas on Alcator C are being investigated by experimental measurements of the bulk electron and ion temperature profiles, and by numerical modelling of the lower hybrid wave propagation and thermal energy transport. Power balance studies are performed on plasmas with parameters n-bar/sub e/ = 3-7 x 10^{13} cm^{-3}, B = 7-11 T, I/sub p/ = 100-200 kA, and q(a)> or =8, and with RF powers up to 1 MW at 4.6 GHz. The temperature mesurements from RF-driven discharges are compared with those from similar ohmic discharges (identical current and density). The gross energy confinement time, defined by tau/sub E/^3/2 ($\Sigma \int$n/sub j/T/sub j/ dV)/P/sub i//sub n/, is lower in the RF-driven discharges than in the ohmic ones by a factor of 1.5 to 4, depending on the plasma conditions and RF power. While tau/sub E/ in ohmic discharges increases with density and is independent of the toroidal field, the confinement time in the RF-driven discharges decreases with RF power, is independent of density in the range n-bar/sub e/ = 3-7 x 10^{13} cm^{-3}, and increases with the toroidal magnetic field. The confinement degrades slightly with increasing current in both RF-driven and ohmic discharges. The code used to simulate these results employs a lower hybrid ray tracing package, a Fokker-Planck code for the evolution of the fast electron tail, and enhanced thermal transport models for auxiliary-heated plasmas. In the code simulations, more than 80% of the injected RF power is absorbed by electron Landau damping in the inner half of the plasma column, the remainder being dissipated by collisions near the plasma edge.

33368 Current profile shaping and elimination of sawteeth oscillations by lower hybrid current drive in the PLT tokamak. Chu, T.K.; Bell, R.; Bernabei, S.; Cavallo, A.; Hooke, W.; Hosea, J.; Jobes, F.; Meservey, E.; Motley, R.; Stevens, J. (Princeton University, Plasma Physics Laboratory, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 131-134(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Sawteeth oscillations, which exist in inductively driven discharges in tokamaks, are eliminated by launching additional lower hybrid wave power. At RF power levels beyond that required to eliminate the sawteeth oscillations, electron heating in the central region of the plasma is observed.

33369 Comparison of top and side launch of lower hybrid waves in the PLT tokamak. Bernabei, S.; Cavallo, A.; Chu, T.K.; Hooke, W.; Jobes, F.; Meservey, E.; Motley, R.; Stevens, J.; von Goeler, S.; Guharay, S. (Princeton University, Plasma Physics Laboratory, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 135-138(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

For identical 90° settings the side coupler of the PLT 2.45 GHz, 1 MW lower hybrid system is more efficient at driving current than the top coupler at densities between 1 and 2 x 10^{13} cm^{-3}. We interpret this to be a reflection of the toroidal n/sub parallel/ upshift introduced by top launch. Measurements with 90°/60° (side/top) phase setting produces identical ΔI, as predicted theoretically from the ray tracing code.

33370 Theoretical studies of lower hybrid current drive in the Alcator C tokamak. Bonoli, P.T.; Porkolab, M.; Englade, R. (Massachusetts Institute of Technology, Cambridge, Massachusetts 02139). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 139-142(Jul 1985). (CONF-8505130—). Contract AC02-78ET51013.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Theoretical studies of lower hybrid current drive in the Alcator C tokamak using a simulation model is presented, the model incorporates a 1-D radial transport code to solve for the time evolution of the bulk plasma quantities.

33371 Complex geometric optics theory in an inhomogeneous plasma. Bravo-Ortega, A.; Glasser, A.H. (Department of Physics, Auburn University, Auburn, Alabama 36849). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 147-150(Jul 1985). (CONF-8505130—). Contract AS05-82ER53134.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The geometric optics theory is applied to an inhomogeneous plasma in which the dielectric tensor is not necessarily Hermitian. A complex dispersion relation for a non-degenerate plasma is obtained as well as complex ray tracing and amplitude equations. From the amplitude equation is possible to identify and separate the focusing effects according to their effects on the plasma, e.g. those ones due to cutoffs and resonances. It is expected that this treatment will enable one to investigate the propagation of radio-frequency electromagnetic waves near the harmonics of the cyclotron frequency where the condition 'sigma-circumflex/sup H/ '<<sigma-circumflex/sup A/' is not satisfied.

33372 **Runaway electrons and plasma turbulence in current ramping by lower hybrid waves in tokamak plasmas.** Liu, C.S.; Chan, V.S.; Lee, Y.C. (GA Technologies Inc., San Diego, California 92138). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 155-157(Jul 1985). (CONF-8505130—). Contract AC03-84ER53158.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The role of runaway electrons in current ramping by lower hybrid waves is discussed. The back emf induced by current ramping using lower hybrid waves produces runaway electrons at such a rate that the rate of change of the current carried by runaways can completely compensate the RF current ramp rate if runaways are well-confined. However, runaway electrons can also destabilize the oblique plasma waves due to their anisotropy. The resulting turbulence can greatly reduce the runaway production rate, enabling the current ramping rate to exceed the above limit.

33373 **Theory of the anomalous doppler instability during lower-hybrid current drive.** Luckhardt, S.C. (Plasma Fusion Center, M.I.T., Cambridge, Massachusetts 02139). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 158-161(Jul 1985). (CONF-8505130—). Contract AC02-78ET51013.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

An instability condition is derived for electrostatic waves obeying the dispersion relation $\omega = \omega/\text{sub p//sub e/k/sub parallel//k}$ using a two dimensional electron distribution function, f(v/sub parallel/,v/sub perpendicular/), appropriate for lower-hybrid current drive. It is found that when the raised plateau in f in the velocity range $v_1 < v/\text{sub parallel/} < v_2$ has a sufficiently large anisotropy, T/sub p//sub parallel/>T/sub p//sub perpendicular/, this mode can become unstable. If the plateau velocities satisfy the condition $v_2/v_1 > 1+\omega/\text{sub c//sub e//}\omega/\text{sub p//sub e/}$ then waves exist with phase velocities in the plateau region and these waves are most easily destabilized by the anomalous doppler resonance, ω-k/sub parallel/v/sub parallel/ = -ω/sub c//sub e/.

33374 **Frequency scaling of the lower-hybrid current drive density limit on the Versator II tokamak.** Mayberry, M.J.; Porkolab, M.; Chen, K.; Kaplan, R.D.; Luckhardt, S.C.; Rohatgi, R. (Plasma Fusion Center and Research Laboratory of Electronics, M.I.T., Cambridge, Massachusetts 02139). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 162-165(Jul 1985). (CONF-8505130—). Contract AC02-78ET51013.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

It is shown that the lower-hybrid current drive density limit can be raised significantly by increasing the frequency of the RF source, while leaving the plasma parameters the same.

33375 **RF ramp-up efficiency versus power.** Stevens, J.E.; Colestock, P.L.; Bernabei, S.; Chu, T.K.; Hooke, W.; Jobes, F.C.; Motley, R.; Meservey, E.; von Goeler, S. (Plasma Fusion Center, MIT). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 178-181(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The RF current ramp-up efficiency versus RF power in tokamak is studied theoretically.

33376 **Mode conversion of lower hybrid waves at high ion cyclotron harmonics.** Swanson, D.G.; Cho, S. (Physics Department, Auburn University, AL 36849). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 182-185(Jul 1985). (CONF-8505130—). Contract AS05-82ER53134.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The problem of ion cyclotron harmonic absorption for a lower hybrid wave is shown to be a mode conversion problem. A new form of the dispersion relation is developed and then expanded to get a differential equation identical to that for the second harmonic problem. The validity of this model is restricted to the region far from the lower hybrid resonance layer. It is shown that mode couplings occur among the incident cold wave and two other waves, and the tunneling factor becomes singular there.

33377 **Nonlinear lower hybrid wave depletion.** Wersinger, J.; Park, I. (Department of Physics, Auburn University, Auburn, Alabama 36849). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 194-197(Jul 1985). (CONF-8505130—). Contract AS05-82ER53134.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Two numerical ray tracing codes with focusing are used to compute lower hybrid daughter wave amplification by quasi-mode parametric decay. The first code, LHPUMP provides a numerical pump model on a grid. This model is used by a second code, LHFQM which computes daughter wave amplification inside the pump extent and follows the rays until their energy is absorbed by the plasma. An analytic model is then used to estimate pump depletion based on the numerical results. Results for PLT indicate strong pump depletion at the plasma edge at high density operation for the 800 Mhz wave frequency, but weak depletion for the 2.45 Ghz experiment. This is proposed to be the mechanism responsible for the high density limit for current drive as well as for the difficulty to heat ions.

33378 **Heating of electrons in a high density Tokamak by a micro-wave near second harmonic frequency.** Matsuda, K. (GA Technologies Inc., San Diego, California 92138). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 218-221(Jul 1985). (CONF-8505130—). Contract AC03-84ER53158.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Detailed numerical solutions for obliquely propagating electromagnetic waves near the second harmonic electron cyclotron frequency have been obtained for a plasma of density around the cutoff density of the ordinary mode (O-mode). In a tokamak plasma satisfying a relatively loose condition, a launched O-mode of moderate n/sub parallel/ pass through locations where several branches of electromagnetic hot plasma modes with large right hand components may exist; one of them is the branch of the extraordinary mode (X-mode) and others are new modes. Possibilities of electron heating through mode conversions to those modes are discussed.

33379 **Electron cyclotron heating at down-shifted frequencies in PLT and TFTR.** Mazzucato, E.; Fidone, I.; Giruzzi, G.; Krivenski, V. (Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 222-226(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

It is shown that the ECH at down shifted frequencies can be tested in present day totamaks with the existing microwave sources (GoGH/sub z/) or those under development (100GH/sub z/).

33380 **Study of the effect of localized ECH on transport and stability in plasmas.** Kritz, A.H.; Hsuan, H.; Cavallo, A.; McCune, D.; Mikkelsen, D.R.; Rutherford, P.H.; White, R.B. (PPPL Princeton University, Princeton, New Jersey 08544). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 235-242(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073;FG02-84ER53187.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

TORAY has been linked with the BALDUR and TRANSP transport codes in order to model the electron cyclotron heating that occurred in PDX. Results of simulation studies are presented, and electron transport in an ECH plasma is discussed. The simulation studies confirm the localized nature of ECH and indicate the possibility of controlling energy transport at the plasma center by localized heating or current drive.

33381 **ICRF heating in STM.** Talmadge, S.; Samec, T.K.; Lazar, N.H. (TRW Space and Technology Group, Redondo Beach, California 90278). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 103-106(Jul 1985). (CONF-8505130—). Contract AC03-79ET51017.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

A calibrated cesium cell charge exchange analyzer is used to diagnose the STM plasma heated at the fundamental ion cyclotron frequency (2.85MHz). Up to 25kW of RF power has been applied to an ECRH source plasma. High density ($\sim 1.5 \times 10^{13} cm^{-3}$) hot ion plasmas have been produced with strongly peaked radial profiles. The highest ion beta reached thus far is ~5% with no trend yet toward saturation.

33382 **Two-chamber model for divertors with plasma recycling.** Langer, W.D.; Singer, C.E. (Plasma Physics Laboratory, Princeton University, Princeton, NJ). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-13**: No. 3, 163-168(Jun 1985).

To model particle and heat-loss terms at the edge of a tokamak with a divertor or pumped limiter, a simple two-chamber formuluation of the scrapeoff has been constructed by integrating the fluid equations, including sources, along open field lines. The model is then solved for a wide range of density and temperature conditions in the scrapeoff, using geometrical parameters typical of the poloidal divertor in the poloidal divertor experiment (PDX). The solutions characterize four divertor operating conditions for beam-heated plasmas: plugged, unplugged, blowthrough, and blowback.

33383 **Bounds on instability growth rates for cold plasmas streaming along an infinite magnetic guide field.** Kadish, A.; Kriegsmann, G.; Lemans, D.S. (Los Alamos National Laboratory, Los Alamos, NM). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Plasma Science;* **PS-13**: No. 3, 167-170(Jun 1985).

We derive two bounds on growth rates for streaming instabilities of cold plasmas with inhomogeneous density and velocity profiles transverse to a unidirectional infinite magnetic field: a uniform bound which is independent of wavenumber, and a wavenumberdependent bound which is less than the uniform bound for long wavelengths. Here streaming instabilities include both multistream instabilities in which two or more streams with different velocities overlap in configuration space, and the slipping stream instability in which a stream has a transverse velocity gradient. The bounds obtained are functions of only global steady-state parameters and are useful in bounding growth rates in experimental devices.

33384 **Calculation of RFP equilibrium in ZT-40M by finite-beta model.** Nagayama, Yoshio. (Los Alamos National Lab., NM, USA). *Japanese Journal of Applied Physics, Part 1: Regular Papers and Short Notes;* **24**: No. 5, 585-588(May 1985).

A simple finite-β model is proposed for calculating the reversed-field pinch (RFP) plasma equilibrium using the Grad-Shafranov equation, so as to extend the calculation to two dimensions; and the importance of the pressure profile effect on F and theta is pointed out. The equilibrium in the ZT-40M RFP plasma is obtained using this model by adjusting the parameters so that F, theta, βsub(ax), and the pressure profile are consistent with the experimental data. In high-theta operation, the sawtooth oscillation is found to be accompanied by changes in the field and current profiles.

33385 **Plasma radius control system for tandem mirrors.** Najmabadi, F.; Conn, R.W. (University of California at Los Angeles, Fusion Engineering and Physics Program, School of Engineering and Applied Science and Center for Plasma Physics and Fusion Engineering, Los Angeles, CA). *Fusion Technology;* **7**: No. 1, 57-65(Jan 1985).

The operation of a tandem mirror reactor (TMR) at fractions of full power is an important part of the power plant operation. It has been shown that fractional power operation can best be achieved by controlling the plasma radius, leaving the rest of plasma parameters unchanged. The physics of magnetic confinement in a TMR can be used to design the desired radius control (RC) system. It is proposed to bias the field lines through the ends of a tandem mirror device and control the radial electric field in order to guard against rotational instabilities and ensure nonstochastic radial transport. In this scheme, plasma on the unbiased field lines suffers rapid transport and is lost. As such, the potential control of the direct converter plates as well as the location of the grounded halo dumps requires the flux tube containing the core plasma to match the direct converter area at all times. Based on this effect, an RC system can be devised that uses the conservation of the magnetic flux to adjust the field near the direct converter such that a flux tube with a smaller radius in the device matches the direct converter. Field lines outside this flux tube are not properly biased and cannot support core plasma. A practical design of such an RC system for the Mirror Advanced Reactor Study conceptual TMR is presented. The power consumption by the RC coil system is modest and no engineering difficulty in the design and construction of such a system is expected. Utilization of such an RC system in advanced tandem mirror experiments can also be of great use in the study of such various phenomena as radial transport, control of the radial electric field, halo plasma production, radio-frequency absorption, etc.

33386 **1-1 1/2 computational using poloidal flux coordinates and an integral transform technique.** Olson, R.E.; Miley, G.H. (Fusion Studies Lab., Univ. of Illinois, Urbana, IL 61801). pp 731-742 of Proceedings of an international meeting on advances in nuclear engineering computational methods. Volume 2. LaGrange Park, IL; American Nuclear Society (1985). (CONF-850411—).

From International meeting on advances in nuclear engineering computational methods; Knoxville, TN, USA (9 Apr 1985).

A computational method for a "1-1/2" D treatment of plasma transport in a spheromak is described. The method uses poloidal flux coordinates with appropriate surface average quantities and introduces a new integral transform method for rapid solution of the 2-D equilibrium portion of the problem. An illustrative application describing the time evolution of the plasma in the pS-Ic experiment is presented.

33387 **Finite element solution of the Fokker-Planck equation in electrostatic magnetic mirror fusion machines.** Zerguini, T.H. (Fusion Studies Lab., Nuclear Eng. Program, Univ. of Illinois, Urbana, IL 61801). pp 743-758 of Proceedings of an international meeting on advances in nuclear engineering computational methods. Volume 2. LaGrange Park, IL; American Nuclear Society (1985). (CONF-850411—).

From International meeting on advances in nuclear engineering computational methods; Knoxville, TN, USA (9 Apr 1985).

A pertubation method is developed to find solutions of sloshing-ion distributions. This method uses an expansion in the ratio of electrostatic potential to average ion energy to simplify the bounce-averaged Fokker-Planck equation. Finite element techniques, which provide rapid numerical solutions for parametric studies of sloshing ions, are used to derive the zero-th order angular and velocity equations. The first order two-dimensional equation was also expanded into finite element "hat functions." Application of Galerkin's method gives a linear system of equations where all matrix and source elements are calculated analytically. The density

ratio and the potential profiles as functions of axial distance are computed. There is excellent agreement with results from the Lawrence Livermore National Laboratory bounce-averaged Fokker-Planck code with as much as 500 times and 50 times less CRAY-1 computer time for the zero-th order and first order solutions, respectively.

33388 **Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas.** Harned, D.S.; Kerner, W. (Courant Inst. of Mathematical Sciences, NYU, New York). pp 800-811 of Proceedings of an international meeting on advances in nuclear engineering computational methods. Volume 2. LaGrange Park, IL; American Nuclear Society (1985). (CONF-850411—). Contract AC02-76ER03077.

From International meeting on advances in nuclear engineering computational methods; Knoxville, TN, USA (9 Apr 1985).

A semi-implicit method for solving the full compressible resistive MHD equations in three dimensions is presented. The method is designed for use in the modeling of fusion plasmas in magnetic confinement devices. The method is unconditionally stable with respect to the fast compressional modes. The time step is limited by the slower shear Alfven motion. The computing time required for one time step is essentially the same as that for explicit methods. The code is applied to resistive instabilities in cylindrical tokamak equilibria.

33389 **Wave-mixing from unexpected atomic transitions in laser generated plasma.** Wu, C.Y.R.; Xu, S.; Deng, H.; Yih, T.S. (Dept. of Physics and Space Sciences Center, Univ. of Southern California, Los Angeles, CA 90089-1341). pp 740-744 of Lasers '84. McLean, VA; STS Press (1984). (CONF-8411153—).

From International conference on lasers '84; San Francisco, CA, USA (26 Nov 1984).

In a study of the interaction of intense visible laser radiation with Na vapor the authors have observed tunable coherent UV radiation generated in the region of 3d→3s transition through four-wave mixing and that the efficiency of the transition is quite high. The tuning characteristics of the UV outputs and their dependences on the sodium vapor density and laser power density are presented.

33390 **Two-dimensional beat wave acceleration simulation.** Kindel, J.M.; Forslund, D.W.; Mori, W.B.; Joshi, C.; Dawson, J.M. (Los Alamos National Lab., P.O. Box 1663, Los Alamos, NM 87545). pp 462-466 of Lasers '84. McLean, VA; STS Press (1984). (CONF-8411153—).

From International conference on lasers '84; San Francisco, CA, USA (26 Nov 1984).

Finite laser beam particle simulations of beat wave acceleration show that a coherent plasma wave excited by two-colinear laser beams at a difference frequency equal to the plasma frequency can produce maximum electron energies as predicted by simple one-dimensional theory. The time to saturation and the saturation amplitude of the plasma wave electric field agrees with the Rosenbluth-Liu theory. Stimulated Raman scattering does not appear to degrade the electron acceleration process. Eventually self-focussing and filamentation limit the lifetime of the coherent plasma wave to tens of picoseconds for an intense CO_2 laser beam.

33391 **Experiments on the plasma beat wave accelerator at UCLA.** Joshi, C.; Clayton, C.E.; Darrow, C.; Umstadter, D. (Univ. of California, Los Angeles, CA 90024). pp 467-471 of Lasers '84. McLean, VA; STS Press (1984). (CONF-8411153—). Contract AS03-83ER40120.

From International conference on lasers '84; San Francisco, CA, USA (26 Nov 1984).

Recent experiments at UCLA on the excitation of a high-phase velocity plasma wave by beating two laser beams in a plasma such that their frequency difference equals the plasma frequency are described. Thomson scattering using a ruby laser probe is used to measure the plasma density as well as ion and electron modes. Stokes and Anti-Stokes radiation in the forward direction is used to infer the existance of the "fast" plasma wave.

33392 **Laser plasma LINAC.** Palmer, R.B.; Baggett, N.; Claus, J.; Fernow, R.; Ghosh, A.; Giordano, S.; Radeka, V.; Stumer, I.; Takacs, P.; Warren, J. (Brookhaven National Lab., Upton, NY 11973). pp 472-477 of Lasers '84. McLean, VA; STS Press (1984). (CONF-8411153—).

From International conference on lasers '84; San Francisco, CA, USA (26 Nov 1984).

The grating accelerator concept is reviewed. The use of a double row of conducting droplets instead of a conventional grating constrains the fields to a narrow band. The use of droplets also allows fields that will destroy the structure. RF modeling results are presented together with a simple theory of the fields. Coupling to incoming radiation is described. A possible laser specification is also given.

From Ignition Technical Oversight Committee meeting; Austin, TX, USA (20 Jan 1986).

Viewgraphs from the presentation are given. The cost estimating methodology is described. (MOW)

33394 **(CONF-860412—4) 3-D analysis on arbitrarily-shaped ICRF antennas and Faraday shields.** Chen, G.L.; Whealton, J.H.; Baity, F.W.; Hoffman, D.J.; Owens, T.L. (Oak Ridge National Lab., TN (USA); McDonnell Douglas Astronautics Co., St. Louis, MO (USA)). 1986. Contract AC05-84OR21400. 2p. NTIS, PC A02. File Number DE86010014.

From 13. European conference on controlled fusion and plasma heating; Schliersee, F.R. Germany (14 Apr 1986).

Cavity antennas with Faraday shields are proposed to couple ion cyclotron radio frequency power for heating fusion plasmas. This application requires small, high-power, low-frequency antennas. The results are presented of a theoretical study of the ICRF antennas being developed for this purpose at the Radio Frequency Test Facility (RFTF). The objectives of this work are to optimize experimental designs and to confirm test results. (MOW)

33395 **(CONF-860421—43) Near term and long term materials issues and development needs for plasma interactive components.** Mattas, R.F. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 26p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010518.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

Plasma interactive components (PICs), including the first wall, limiter blades, divertor collector plates, halo scrapers, and RF launchers, are exposed to high particle fluxes that can result in high sputtering erosion rates and high heat fluxes. In addition, the materials in reactors are exposed to high neutron fluxes which will degrade the bulk properties. This severe environment will limit the materials and designs which can be used in fusion devices. In order to provide a reasonable degree of confidence that plasma interactive components will operate successfully, a comprehensive development program is needed. Materials research and development plays a key role in the successful development of PICs. The range of operating conditions along with a summary of the major issues for materials development is described. The areas covered include plasma/materials interactions, erosion/redeposition, baseline materials properties, fabrication, and irradiation damage effects. Candidate materials and materials development needs in the near term and long term are identified.

33396 **(CONF-860421—45) Thermal conductivity of mixed beryllia/Li ceramic in sphere-pac forms.** Tam, S.W.; Johnson, C.E. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010521.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

Lithium containing ceramic tritium breeder materials have been envisaged to be deployed within the blanket region of a fusion reactor in several possible configurations. One of these is the sphere-pac configuration. For this configuration an important material parameter is its thermal conductivity (Ksp). It is well known that Ksp demonstrates rather complex behavior as a function of temperature, gas pressure, gas composition, particle size, and packing fraction. The inter-relationship of these parameters has been satisfactorily accounted for with a hierarchical effective media theory (HEMT). For tritium self sufficiency most lithium ceramic breeder materials would require the presence of a neutron-multiplier (e.g., Be or BeO). Here, the influence of configuration on Ksp (i.e., how one put the different solid components together in the sphere-pac bed) becomes important. Using a generalized HEMT (i.e., a model with capability to describe systems with more than one solid material component) we have analyzed in detail the configurational dependence of Ksp for sphere-pac beds composed of lithium ceramic/BeO microspheres. Substantial improvements in Ksp can be achieved if a configuration of lithium ceramic spheres coated with BeO is chosen.

33397 **(CONF-860421—46) Recent results on the preparation and properties of Li-containing Cu alloys.** Mendelsohn, M.H.; Gruen, D.M.; Krauss, A.R. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 15p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010495.

From 2. international conference on fusion reactor materials (ICFRM-2); Chicago, IL, USA (13 Apr 1986).

Homogeneous solid solutions of Li in copper have been prepared containing up to 6 to 8 at. % Li. However, the possible metastable nature of these materials has not yet been fully investigated. The existence of a unique intermetallic compound near the composition Cu_4Li is currently being investigated by single crystal x-ray diffraction and powder neutron diffraction techniques. The copper-lithium binary alloy has demonstrated potential as a means of forming a self-sustaining coating for the reduction of sputtering-induced erosion in fusion applications. The initial performance under high flux conditions is strongly dependent on the lithium content and method of preparation.

33398 **(CONF-860610—17) Overview of the FEDC Compact Ignition Tokamak program.** Flanagan, C.A. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 6p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86007229.

From American Nuclear Society annual meeting; Reno, NV, USA (15 Jun 1986).

The Fusion Engineering Design Center (FEDC) has developed an alternate version of the Ignitor design as a candidate option for the US Compact Ignition Tokamak program. The Ignitor concept has been advocated for several years as a concept to achieve ignition in a compact size using state-of-the-art technology and deriving significant contribution toward ignition from ohmic heating. The projected incremental cost, assuming siting at the Princeton Plasma Physics Laboratory, appears attractive.

33399 **(CONF-8603116—1) Analysis of the FELIX experiments with cantilevered beams and hollow cylinders.** Turner, L.R.; Hua, T.Q.; Lee, S.Y. (Argonne National Lab., IL (USA)). 1986. Contract W-31-109-ENG-38. 44p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010528.

From 4. eddy current seminar; Chilton, UK (24 Mar 1986).

Experiments have been performed with the FELIX facility at Argonne National Laboratory to study the coupling between eddy currents and deflections and to provide data for validating eddy current computer programs. Experiments with cantilevered beams in crossed steady and decaying magnetic fields verify that coupling effects act to alleviate the large currents, deflections, and stresses predicted by uncoupled analyses. Measurements of magnetic fields induced in conducting hollow cylinders are analyzed by exponential fitting and by transfer functions. Spatial variation in the parameters of the exponential fit and in those of the one- and two-pole transfer functions suggests that several eddy current modes are acting in the cylinder test pieces.

33400 **(CONF-8604175—1) Panel discussion on prospects for fusion power.** Sheffield, J. (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 5p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010035.

From Fusion Power Associates symposium on fusion energy development: an international effort; Washington, DC, USA (24 Apr 1986).

Although substantial progress is made every year in fusion research, the projected time to realize the ultimate goal of commercial fusion always seems to be 25 to 30 years away. This shifting schedule reflects the underlying difficulty of developing fusion. Every new technology improves the prospects for success, yet as each fusion mountain is scaled, it serves mainly to bring a better view of the next mountain. Two questions are considered: (1) why are so many configurations studied, and (2) what constitutes an economic power density.

33401 **(DOE/ER—0046/23) Damage analysis and fundamental studies. Quarterly progress report, July-September 1985.** (Hanford Engineering Development Lab., Richland, WA (USA)). Nov 1985. Contract AC06-76FF02170. 78p. NTIS, PC A05/MF A01; 1; GPO Dep. File Number DE86010232.

Separate abstracts were prepared for 8 of the included sections. (MOW)

33402 **(GA-A—18341) End of three-year contract report on the RFC-XX-M device research, Nagoya, Japan, March 1, 1983-December 31, 1985.** Garner, H.R. (GA Technologies, Inc., San Diego, CA (USA)). Apr 1986. Contract AC03-83SF11713. 30p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010669.

RFC-XX-M is a large cusp end celled, totally axisymmetric tandem mirror located at the Institute of Plasma Physics in Nagoya, Japan. The device was originally constructed to study rf pondermotive potential pluging and was built with funds from the Japanese Ministry of Education. In 1983, DOE awarded GA Technologies Inc. (GA) a contract to study the physics of axisymmetric mirror plasmas and, through an international agreement, the GA group began to perform experiments on the device. The device has been modified and the experimental program expanded to respond to the needs of the international mirror program. Since then, a team of US scientists have been present at the experimental site for over 60% of the time. This report summarizes the achievements of this cooperative research program and the impact of those achievements on the US Mirror Program.

33403 **(IAE—4026/8) Study on the thermonuclear energy ion interaction with a surface of carbon containing structural materials for thermonuclear reactors.** Begrambekov, L.B.; Gerchikov, M.Yu.; Guseva, M.I. (Gosudarstvennyj Komitet po Ispol'zovaniyu Atomnoj Ehnergii SSSR, Moscow. Inst. Atomnoj Ehnergii). 1984. 40p. (In Russian). NTIS (US Sales Only), PC A03/MF A01. File Number DE86701952.

Sputtering of titanium, niobium and tantalum carbides coating the first wall of thermonuclear reactors has been investigated as well as massive carbon containing materials and compositions for electrodes in reactor systems of megawatt atom beams during their bombardment with 0.3-10 keV hydrogen, deuterium and helium ions at 100-160 deg C. Selective and total coefficients of cathode sputtering and dynamics of selective sputtering have been determined. The effect of the sputtering on the surface structure was observed. Energy and mass spectra of ion-ion emission and degassing kinetics of carbon-containing materials were studied. Change of the surface composition at heating and ion bombardment has been investigated. A near-surface layer with new properties: composition, structure and chemical bonds of atoms formed on the surface of carbon-containing materials due to ion bombardment and subsequent return of sputtered atoms. Use of some of the materials investigated as a renewed coating of the first tokamak-reactor wall or

structural material can lead to the decrease of the surface erosion rate and of radiation losses.

33404 **(IPP—1/236) Assessment of pellet injection for NET. Pt. 5. Ignition and fuelling scenario calculations.** Lengyel, L.L. (Max-Planck-Institut fuer Plasmaphysik, Garching (Germany, F.R.)). Aug 1985. 54p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86751760.

Results of ignition and continuous fuelling scenario calculations are presented that were obtained in the framework of an assessment performed for NET on the basis of the INTOR parameters. The results obtained with pellet injection are compared with results corresponding to gas puffing. Pellet injection transports fresh fuel to the reaction zone on a time scale that is much shorter than the diffusion time characterizing the gas puffing method, thus making the method flexible and readily adaptable to different situations. In the case of ignition by pellet injection, it may become possible to have deep NB penetration and maintain favourable heat deposition profiles up to the moment of density ramp-up, thus substantially relaxing the beam output requirements. Three beam energies (D^0 particles) have been considered: 120 keV, 100 keV, and 80 keV. The importance of a proper match between the beam characteristics and the pellet parameters, specific for the transport scaling assumed (ALCATOR-INTOR), is shown. In the case of continuous fuelling of an already ignited discharge, the alpha power production notably increases if repetitive pellet injection, instead of gas puffing (at a fixed value of βsub(T)), is applied. The advantages of pellet injection are substantial even at moderate pellet velocities. (orig.).

33405 **(LA-UR—86-1299) Compact reversed-field pinch reactors (CRFPR).** Krakowski, R.A.; Miller, R.L.; Bathke, C.G.; Hagenson, R.L.; Copenhaver, C.; Werley, K.A. (Los Alamos National Lab., NM (USA); Phillips Petroleum Co., Bartlesville, OK (USA)). 1986. Contract W-7405-ENG-36. 19p. (CONF-860551—2). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010185.

From Technical meeting and workshop on fusion reactor design and technology; Yalta, USSR (26 May 1986).

The unique confinement properties of the Reversed-Field Pinch (RFP) are exploited to examine physics and technical issues related to a compact, high-power-density fusion reactor. This resistive-coil, steady-state, toroidal device would use a dual-media power cycle driven by a fusion power core (FPC, i.e., plasma chamber, first wall, blanket, shield, and coils) with a power density and mass approaching values characteristic of pressurized-water fission rectors. A 1000-MWe(net) base case is selected from a comprehensive trade-off study to examine technological issues related to operating a high-power-density FPC. After describing the main physics and technology issues for this base-case reactor, directions for future study are suggested.

33406 (LBL—19100, pp 28-34) **Neutral-beam development.** May 1985. NTIS, PC A05/MF A01. File Number DE85013314.

In Accelerator and Fusion Research Division: 1984 summary of activities.

Increasing attention is turning to negative ions as the source for intense neutral beams, principally because they can be efficiently neutralized even at high energies (above 150 keV/particle for deuterium). Nonetheless, one of the highlights of 1984 was the choice of an LBL positive-ion source as the common long-pulse source for experiments at TFTR, MFTF-B, and Doublet III in the coming years. In a series of 80-kV, 30-second tests at the Neutral Beam Engineering Test Facility, the LBL source produced an average current of over 40 A. Negative-ion source development continued to focus on two different designs. The surface-conversion source - the better understood of the two - can now be considered a practical tool, largely because of advances that allow us to effectively control cesium contamination. Development of the volume-production source also moved forward, notably in the areas of increasing the extracted current and reducing the electron content of the beam.

33407 **(ORNL/FEDC—86/1) Interim report on the assessment of engineering issues for compact high-field ignition devices.** Flanagan, C.A. (ed.). (Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC05-84OR21400. 157p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE86010060.

The engineering issues addressed at the workshop included the overall configuration, layout, and assembly; limiter and first-wall energy removal; magnet system structure design; fabricability; repairability; and costs. In performing the assessment, the primary features and characteristics of each concept under study were reviewed as representative of this class of ignition device. The emphasis was to understand the key engineering areas of concern for this class of device and deliberately not attempt to define an optimum design or to choose a best approach. The assessment concluded that compact ignition tokamaks, as represented by the three concepts under study, are feasible. A number of critical engineering issues were identified, and all appear to have tractable solutions. The engineering issues appear quite challenging, and to obtain increased confidence in the apparent design solutions requires completion of the next level of design detail, complemented by appropriate development programs and testing.

33408 **(ORNL/M—156) Fusion Energy Division Annual Information Meeting. Agenda and abstracts, April 8-9, 1986.** (Oak Ridge National Lab., TN (USA)). 1986. Contract AC05-84OR21400. 49p. (CONF-8604182—Absts.). NTIS, PC A03/MF A01; GPO Dep. File Number DE86009975.

From Fusion energy division annual information meeting; Oak Ridge, TN, USA (8 Apr 1986).

Abstracts of the presentations are included. The general topics covered included the following: (1) development and technology, and (2) plasma confinement, theory, and FEDC. In addition, abstracts are also given for various invited talks. (MOW)

33409 **(SAIC—86/1606) Large mirror ratio tandem mirror magnetic design studies.** Francis, G.L.; Myra, J.R.; D'Ippolito, D.A.; Catto, P.J.; Aamodt, R.E. (Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.). Apr 1986. Contract AC03-76ET53057. 29p. (PRI—98). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010665.

A systematic study of magnetic designs has been carried out for three-cell quadrupole-stabilized tandem mirror reactors comparable in size to the (octupole) mini-MARS design. In these designs, a single mirror cell at each end of the device serves as end plug, thermal barrier and MHD anchor. The multiple functions of the end plugs make it difficult to simultaneously optimize the physics properties of the plasma (stability, radial confinement, and good particle drift orbits). Two different design approaches have been studied using recently developed magnetic optimization techniques. Typical physics figures of merit are given and critical issues discussed for each design.

33410 **(SAND—85-2623C) Local mixing model with sputtering/redeposition and projectile-implanted atom interaction.** Brice, D.K.; Wampler, W.R. (Sandia National Labs., Albuquerque, NM (USA)). 1986. Contract AC04-76DP00789. 19p. (CONF-860522—2). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010441.

From 7. international conference on plasma surface interactions in controlled fusion devices; Princeton, NJ, USA (5 May 1986).

A previously discussed local mixing model (LMM) accurately describes the buildup of implanted hydrogen to saturation concentration and subsequent isotope exchange for implantation into a variety of materials of interest to the fusion community. Sputtering and surface deposition were not initially included in this model. We have now incorporated into the LMM the effects of sputtering and target-atom redeposition and have also included (in an approximate fashion) the slowing and scattering of implanted ions by previously implanted impurity species. This latter effect has important consequences for high fluence implants. Equations are derived which govern the evolution of the depth profiles of the implanted species and a formal solution is given for conditions which often are en-

countered in laboratory experiments. The time (fluence) dependence of the depth profile is discussed, and numerical results are compared with experiment for oxygen implantation into graphite at energies for which surface erosion is a significant effect. Solutions to the equations are also discussed for cases in which surface redeposition is significant. These latter solutions are pertinent to impurity and hydrogen isotope buildup in first wall components in operating fusion reactors.

33411 **(UCRL—15751) Final report for TMX-U systems support.** (TRW, Inc., Cleveland, OH (USA)). 1985. Contract W-7405-ENG-48. 108p. NTIS, PC A06/MF A01; 1; GPO Dep. File Number DE86010565.

This final report is for the TMX-U RF systems development subcontract with Lawrence Livermore National Laboratory (LLNL). This program was initiated on July 1, 1983 and extended through September 30, 1985. This program was concerned with the development of RF systems to meet the objectives of the TMX-U mirror program at LLNL. To accomplish this the following areas were studied during the course of this contract: (1) Ion Cyclotron Heating, (2) Electron Cyclotron Heating, (3) Drift Pumping, (4) Plasma Modeling, (5) Neutral Beam Heating, and (6) Neutral Gas transport and fueling. The key results of these activities are reported.

33412 **Method to produce large, uniform hollow spherical shells.** Kendricks, C.D. (to Dept. of Energy). US Patent 4,548,767. 22 Oct 1985. Filed date 26 Sep 1983. vp.

PAT-APPL-535464.

Large, uniform hollow spherical shells are produced by forming uniform size drops of heat decomposable or vaporizable material, evaporating the drops to form dried particles, coating the dried particles with a layer of shell forming material, and heating the composite particles to melt the outer layer and decompose or vaporize the inner particle to form an expanding inner gas bubble which expands the outer layer. By cycling the temperature and pressure on the hollow shells, spherical shells with uniform walls are produced.

33413 **Improved brightness of the ATA injector.** Weir, J.T.; Caporaso, G.J.; Chambers, F.W.; Kalibjian, R.; Kallman, J.; Paul, A.C.; Prono, D.S.; Slominski, M.E. (Lawrence Livermore National Laboratory, University of California, Livermore, CA). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-32**: No. 5, 1812-1813(Oct 1985). (CONF-850504—).

From Particle accelerator conference; Vancouver, Canada (13 May 1985).

Studies of the ATA injector using the low density plasma cathode (flashboard cathode) have shown that the brightness of the injector was being limited by the non-uniform emission of the cathode surface. To avoid this difficulty, we rearranged the cathode-anode geometry to accommodate field shaping surfaces and a field emission cathode. Computer simulations of the cathode-anode geometry using the EBQ code led us to try a 5.5 cm radius cathode with an A-K gap of about 13 cm. There was no grid used during the experiment. The cathode was surrounded by a Pierce correcting shroud and the typical gap voltage was about 2.5 MeV. Our initial tests of the field emission cathodes were done using a woven carbon yarn that was laced through a fine mesh screen and then trimmed to a uniform height. Using these "tufted" cathodes, it was easy to vary the number of emission sites per square centimeter. We also varied the geometry of these cathodes by giving the screen a slight convex shape so that the center of the cathode was about 1 cm closer to the anode plane than the edge of the cathode. At the suggestion of R. Adler of MRC, we also tested commerically available velvet cloth. This was done by epoxying the cloth to the cathode surface using a conducting silver epoxy. We tested the velvet cathodes in both the flat and convex configurations to compare with the tufted carbon yarn cathodes.

33414 **Moderator detritiation at the Savannah River Plant.** Baumgarten, P.K.; Howard, D.W. (E. I. du Pont de Nemours & Co., Savannah River Laboratory, Aiken, SC). *Fusion Technology;* **8**: No. 2, 2491-2494(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A study has been made of the technical and economic aspects of reducing tritium concentration in Savannah River Plant heavy-water moderator by 90%. A single detritiation plant would serve four operating reactors and the desired tritium reduction would be achieved in less than ten years. The process choice has narrowed to three processes. These involve a front-end extraction or preparation of molecular DT in a D_2 stream, and a back-end fractional distillation of this stream followed by catalytic conversion to make 98% tritium T_2.

33415 **Unresolved tritium issues in the Magnetic Fusion Energy Program.** Anderson, J.L.; Bartlit, J.R. (Materials Chemistry Group, Materials Science and Technology, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* **8**: No. 2, 2027-2030(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

This paper discusses twelve issues involving tritium in the Magnetic Fusion Energy Program that remain to be resolved. The issues are discussed in three broad categories: fuel reprocessing issues, detritiation issues, and tritium handling issues. Where appropriate, suggestions are made concerning routes to resolution of the issues.

33416 **Experimental design to study tritium oxidation as a means of tritium control.** Finn, P.A.; Van Deventer, E.M. (Chemical Technology Division, Argonne National Laboratory, Argonne, IL). *Fusion Technology;* **8**: No. 2, 2438-2443(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

The design of an experiment for determining the kinetic rate of the tritium oxidation reaction when tritium atoms are present is described. Determination of the reaction rate will be done by analyzing the ratio of T_2 and T_2O product as a function of time, temperature, tritium concentration, and oxygen concentrations. A model of a proposed surface reaction is given.

33417 **Operating experience with the Sandia tritium facility cleanup systems.** Gildea, P. (Sandia National Laboratories, Livermore, CA). *Fusion Technology;* **8**: No. 2, 2505-2510(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

At Sandia Livermore, significant operating experience has been gained with the containment and cleanup systems that provide personnel safety and environmental protection in the tritium facility. The Gas Purification System (GPS) and Vacuum Effluent Recovery System (VERS)--used for cleanup of glove box and contaminated effluent, respectively--have been operating for more that 70,000 hours. Maintained at 811 K, the original catalyst has shown no indication of degraded performance. The dryer regeneration system has been used to recover 52,000 Ci, with no personnel uptake. Except for VERS vacuum pump overhaul, maintenance on both systems has been minimal.

33418 **Tertiary containment in a multi-room tritium facility.** Kent, L.R. (Monsanto Research Corporation, Mound, Miamisburg, OH). *Fusion Technology;* **8**: No. 2, 2511-2516(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

An experimental system to provide tertiary containment at Mound has been upgraded to support a new multi-room tritium handling facility. This system is used to remove tritium from room air in the event of primary (process) and secondary (glovebox) containment failure. The upgraded system includes a faster response time, piping and valves that are more leaktight, and a new control

panel that better indicates the system status and operating conditions.

33419 **Low concentration conversion of tritium gas to tritiated water.** Easterly, C.E.; Bennett, M.R.; Noguchi, H. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 2, 2564-2568(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Conversion rates of tritium gas (T_2) to tritiated water are reported for tritium in ambient air and in nitrogen mixtures for initial tritium concentrations between 10^{-3} and 1 Ci/m³. Evidence suggests that, for air mixtures, production of condensable species, primarily HTO, occurs at a rate commensurate with the tritium decay rate. Nitrogen with less than 0.05% oxygen decreases this rate by a small (about 25%) amount. Irradiation with up to 10 Krad ^{60}Co does not measurably affect the conversion rate in ambient air. This new data, along with the data from other authors, reveals that over the range of 10^{-3} to 10^{6} Ci/m³, there are three reaction order regimes: (1) first order between 10^{-3} and 10 Ci/m³, (2) approximately second order between 10 and 10^{4} Ci/m³, and (3) first order above 10^{4} Ci/m³.

33420 **Experiments on a ceramic electrolysis cell and a palladium diffuser at the Tritium Systems Test Assembly.** Konishi, S.; Binning, K.E.; Coffin, D.O.; Naruse, Y.; Ohno, H.; Walthers, C.R.; Yoshida, H. (Japan Atomic Energy Research Institute, Tokai-mura, Ibaraki-ken). *Fusion Technology;* 8: No. 2, 2042-2047(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A ceramic electrolysis cell and a palladium diffuser have been developed in Japan and tested with tritium at the Tritium Systems Test Assembly (TSTA) at the Los Alamos National Laboratory, to test their feasibility as possible upgrades for the fuel cleanup system (FCU). The ceramic electrolysis cell, made of stabilized zirconia, was operated at 630°C for an extended period with a mixture of 3% T_2O in He carrier gas in a circulation system with an oxidizing catalyst bed. The palladium diffuser was tested with pure tritium gas, circulated at 280°C, to verify the compatibility of the alloy with tritium, since the ^{3}He produced in the metal could cause degradation. The isotopic effects were also measured for both devices.

33421 **Release characteristics of tritium from high-purity lithium oxide.** O'Kula, K.R.; Vogelsang, W.F. (E. I. du Pont de Nemours & Company, Nuclear Engineering Division, Savannh River Laboratory, Aiken, SC). *Fusion Technology;* 8: No. 2, 2054-2060(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Rates of tritium release from neutronirradiated lithium oxide were determined from isothermal release experiments. High-purity, monocrystalline lithium oxide was purged ex-reactor with helium and helium-hydrogen gas streams. Overall release was found to be controlled by solid-phase diffusion, and was predominantly in the form of condensible species. The result of an independent concentration profile analysis at 923 K was in agreement with the gas release diffusion coefficient. Sweeping the Li_2O with hydrogen-containing gas was found to enhance tritium removal during the early stage of each run.

33422 **Modeling and experiments on tritium permeation in fusion reactor blankets.** Holland, D.F.; Longhurst, G.R. (EG & G Idaho, Inc., Idaho Falls, ID). *Fusion Technology;* 8: No. 2, 2067-2076(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Issues are discussed that are critical in determining tritium loss from helium-cooled fusion breeding blankets. These issues are: (a) applicability of present models to permeation at low tritium pressures, (b) effectiveness of oxide layers in reducing permeation, (c) effectiveness of hydrogen addition as a means to lower tritium permeation, and (d) effectiveness of conversion to tritiated water and subsequent trapping as a means to reduce permeation. The paper discusses theoretical models applicable to these issues, and presents results of experiments in two areas: permeation of mixtures of hydrogen isotopes and conversion to tritiated water.

33423 **A new tritium monitor for the Tokamak Fusion Test Reactor.** Jalbert, R.A. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 2, 2077-2081(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

At DT-fueled fusion reactors, there will be a need for tritium monitors that can simultaneously measure in real-time the concentrations of HTO, HT and the activated air produced by fusion neutrons. Such a monitor has been developed, tested and delivered to the Princeton Plasma Physics Laboratory for use at the Tokamak Fusion Test Reactor (TFTR). It uses semipermeable membranes to achieve the removal of HTO from the sampled air for monitoring and a catalyst to convert the HT to HTO, also for removal and monitoring. The remaining air, devoid of tritium, is routed to a third detector for monitoring the activated air. The sensitivities are those that would be expected from tritium instruments employing conventional flow-through ionization chambers: 1-3 $\mu Ci/m^3$. Its discriminating ability is approximately 10^{-3} for any of the three components (HTO, HT and activated air) in any of the other two channels. For instance, the concentration of HT in the HTO channel is 10^{-3} times its original concentration in the sampled air. This will meet the needs of TFTR.

33424 **Development of an integrated monitoring system for a new tritium facility at Mound.** Rhinehammer, T.B.; Burgess, T.E.; Spyrow, E.L. (Monsanto Research Corporation, Mound, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2095-2102(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A stand-alone system was developed for monitoring process support services and tritium levels in gloveboxes, room air, room exhaust ducts, and stack exhaust. Sixty tritium monitors were built and interfaced to a Health Physics control room where all tritium levels are displayed and abnormal conditions appear as alarms on large display boards. The control room was designed for full remote control of all monitors, with the exception of those for gloveboxes, as well as for control and alarm display of many other functions, including the purge rate for glovebox atmosphere and the selection of room air discharge to stack or to a tritium cleanup system. The monitoring system is interfaced to a date gathering computer and an automatic dialing alarm system.

33425 **Use of metal hydrides for handling tritium.** Ortman, M.S.; Smith, D.J.; Warren, T.J. (E. I. du Pont de Nemours and Company, Savannah River Laboratory, Aiken, SC). *Fusion Technology;* 8: No. 2, 2330-2336(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Savannah River Laboratory is developing new technology to improve the safety, reliability, and flexibility of processing tritium at the Savannah River Plant. This technology, based on metal hydrides, will also decrease the equipment size. The LaNi /sub 5-x/ Al /sub x/ series of alloys is used for tritium storage applications and palladium coated on kieselguhr is used for pumping. In using metal hydrides to handle tritium, special considerations do exist and they must be understood, but they are not causes for concern.

33426 **Long-term behavior of the tritides formed by nickel-based intermetallic compounds.** Bowman, R.C.; Attalla, A.; Craft, B.D.; Matson, L.K.; Steinmeyer, R.H. (Monsanto Research Corporation, Mound Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2337-2343(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Some properties of the tritide phases formed by the intermetallic compounds Mg_2Ni, ZrNi, and $LaNi_5$ have been studied. Whereas $ZrNiT_3$ will retain its stoichiometry indefinitely when sufficient gaseous tritium is available, the stoichiometries of Mg_2NiT_4 and $LaNi_5T$ /sub 6.9/ decrease with time. Although all three intermetallic tritides can retain large quantities of the helium-3 tritium decay daughter product in the solid phase, irreversible release of helium begins after several hundred days for ZrNiT /sub x/ and Mg_2NiT /sub x/. However, $LaNi_5T$ /sub x/ retains all of the helium generated in the solid for at least 2400 days. NMR measurements for ZrNiT /sub x/ and Mg_2NiT /sub x/ imply that helium is retained in microscopic bubbles as previously observed in several binary metal tritides.

33427 **Some tips on tritium technology.** Anderson, J.L.; Coffin, D.O.; Jalbert, R.A.; Nasise, J.E.; Sherman, R.H. (Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 2, 2413-2419(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

This collection of practical suggestions should prove useful to workers at tritium installations where gloveboxes and cleanup systems are used, or where upgrades to such systems are anticipated. These tips are effective approaches to meeting today's stringent containment requirements, and include many applications and extensions of accepted tritium practice, plus a few innovations of our own. The subjects covered are tritium piping systion, tritium monitoring, and contamination control. Some specific problems arising out of recent experience are also discussed, along with some tentative solutions.

33428 **Cost of processing fuel from a molten salt, fusion/fission, hybrid reactor blanket.** Watson, J.S.; Brashears, D.E.; Grimes, W.R. (Oak Ridge National Laboratory, Oak Ridge, TN). *Fusion Technology;* 8: No. 2, 2113-2120(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A conceptual flowsheet was prepared for continuous processing of molten salt used as the blanket material for breeding tritium and fissile material (^{233}U) in a fusion/fission hybrid reactor. The salt, which has a melting point of about 530°C, was 70 mol % LiF, 12 mol % BeF_2, and 18 mol % ThF_4. The hybrid reactor generates 3000 MWe, and the blanket contains 65 m^3 of the breeding salt.

33429 **Tritium control in helium-cooled blankets.** Wong, C.P.C.; Kessel, C.; Maya, I.; Roelant, D.; Schultz, K.R. (GA Technologies Inc., San Diego, CA). *Fusion Technology;* 8: No. 2, 2133-2142(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

As a part of the Blanket Comparison and Selection Study (BCSS), GA Technologies was responsible for the design of helium-cooled, solidand liquid-metal breeder blankets. Conceptual blanket designs were developed, including the consideration of the generation, transport, and extraction of tritium. Evaluations were made of the inventory and leakage of tritium for helium-cooled Li_2O and $LiA10_2$ and liquid lithium breeder blankets for tokamak and tandem mirror reactors. To facilitate the evaluation, a solid breeder tritium code TRIT4 was developed.

33430 **Cryogenic hydrogen isotope distillation for the fusion fuel cycle.** Sherman, R.H. (Materials Chemistry Group, Materials Science and Technology Division, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 2, 2175-2183(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Cryogenic distillation is an attractive method for the hydrogen isotopic separations required in fusion fuel cycles. The theoretical and practical aspects of designing and constructing such systems are well established. Practical considerations in the design of systems are presented and applied to the Isotope Separation System (ISS) at the Tritium Systems Test Assembly (TSTA), as well as systems of distillation columns that might be used for a reactor such as the Tokamak fusion Core Experiment (TFCX) and the recovery of breeding blanket product.

33431 **A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes.** Embury, M.C.; Hinckley, R.; Post, A.H.; Watkins, R.A. (Monsanto Research Corporation, Mound, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2168-2174(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

A low temperature (24 K) distillation system for separating mixtures of hydrogen isotopes has been designed, fabricated, and delivered for use as the main component of the Hydrogen Isotope Separation System (HISS) at Mound. The HISS will handle feed mixtures of all six isotopic species of hydrogen (H_2, HD, HT, D_2, DT, T_2) and will enrich the tritium while producing a stackable raffinate. The design and fabrication techniques used for the HISS distillation system are similar to those used for previous stills. The distillation system was tested with mixtures of protium and deuterium. This system, as well as the feed, product, and raffinate handling systems are presently being installed at Mound where integrated testing is scheduled next calendar year.

33432 **Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system.** Carlson, R.V.; Cole, S.P. (Materials Science and Technology Division, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 2, 2184-2189(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

At the Tritium Systems Test Assembly, tritium is removed from all gaseous waste before these gases are released to the environment. The removal is based on the catalytic conversion of tritium gas and tritiated compounds to the water form and collection of the tritiated water on molecular sieve. The system has operated reliably during the initial tritium phases of TSTA operation with no major problems.

33433 **Operation of the room air tritium removal system at the Tritium Systems Test Assembly.** Carlson, R.V.; Binning, K.E.; Damiano, F.A. (Materials Science and Technology Division, Los Alamos National Laboratory, Los Alamos, NM). *Fusion Technology;* 8: No. 2, 2190-2195(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Fusion reactor facilities will be required to minimize releases of hazardous materials to the environment during both normal operations and accident situations. The Tritium Systems Test Assembly (TSTA) at the Los Alamos National Laboratory has a tritium removal system, capable of processing room air to collect tritium accidentally released into the tritium handling areas of the facility. This system, the Emergency Tritium Cleanup (ETC) system, will both minimize accidental releases to the environment from TSTA and demonstrate the feasibility and operations of a large room air detritiation system. The system is also designed to study tritium releases under controlled conditions. Based on the initial nontritium tests described in this paper, we have determined that the ETC has a single-pass efficiency for tritium collection of greater than 99.9%.

33434 Ultraviolet radiation-damage absorption line in solid deuterium-tritium. Fearon, E.M.; Hunt, J.L.; Poll, J.D.; Souers, P.C.; Tsugawa, R.T. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 2, 2239-2244(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

An ultraviolet absorption feature has been seen in solid deuterium-tritium and hydrogen-tritium at a sensor temperature of 5 K. The peak occurs at 3.6 eV and is about 1.5 eV wide. It disappears when the temperature is raised to about 10 K but reappears upon cooling and is, therefore, radiation induced. At 5 K, the absorption line forms on a time scale of minutes and appears to represent part-per-million levels of electron-mass defects. The suggested model is that of a trapped electron, where the absorption line is the ground state-to-the-conduction band transition. A marked isotope effect is seen between D-T and H-T.

33435 Separation of hydrogen isotopes by thermal diffusion. Rutherford, W.M.; Lindsay, C.N. (Monsanto Research Corporation, Mound, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2278-2284(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

At high hot wall temperatures the gas phase thermal diffusion column acts as an atomic rather than a molecular separator. A modified theory was developed to describe the process. Equivalent transport equations were derived for the two nuclides in a binary atomic mixture. The equations are identical in form to those normally encountered in thermal diffusion column theory. Experiments to test the theory were carried out with two 3-meter columns. Experimental results with deuterium-tritium mixtures were found to be in satisfactory agreement with theory, and it was concluded that the theory was sufficiently accurate for design purposes.

33436 Tritium-helium effects in metals. Caskey, G.R. (Savannah River Laboratory, Aiken, SC). *Fusion Technology;* 8: No. 2, 2293-2298(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Investigations of helium effects in metals at the Savannah River Laboratory have been carried out by introducing helium by radioactive decay of tritium. This process does not create concurrent radiation damage, such as accompanies ion implantation and (n,α) reactions. The process has its own peculiarities, however, which partially mask and interact with the helium effect of interest. The distribution and local concentration of helium and tritium, which are responsible for changes in mechanical properties and fracture mode, are controlled by the large difference in solubility and diffusivity between the two atoms and by their differing interaction energies with lattice defects, impurities, and internal boundaries. Furthermore, in all investigations with helium generated from tritium decay, some tritium and deuterium are always present. Consequently, property changes include tritium-helium interaction effects to some extent. Results of investigations with several austenitic stainless steels, Armco iron, and niobium single crystals illustrate the variety of phenomena and some of the complex interactions that can be encountered.

33437 Permeation of deuterium implanted into fusion reactor materials. Andrel, R.A.; Holland, D.F.; Longhurst, R.A.; Struttman, D.A. (EG & G Idaho Inc., Physical and Biological Sciences Div., Idaho Falls, ID). *Fusion Technology;* 8: No. 2, 2299-2305(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

This paper reports on implantation-driven permeation experiments made for primary candidate alloy (PCA) and the ferritic steel HT-9 using deuterium ion beams from an accelerator. The results include measurements of the implantation flux and fluence dependence of the deuterium reemission and permeation for specimens heated to approximately 430°C. Simultaneous measurements of the ions sputtered from the specimen front surface with a secondary ion mass spectrometer provided some characterization of the surface condition throughout an experiment. For both materials, the permeation rate was lowered by the implantation process. However, the steady state permeation rate for HT-9 was found to be at least a factor of 5 greater than that for PCA.

33438 Interaction of polyethylene and tritium gas as monitored by raman spectroscopy. Gill, J.T. (Monsanto Research Corporation - Mound, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2318-2329(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

Irradiation of high-density polyethylene by an $\int 1$ atm overpressure of T_2 gas at 23 + or - 2°C has been shown to produce severe damage, $\int 200$ MRad dose, within 6 months. Production rate of H_2 gas from irradiation due to polymer incorporation of tritium increased quickly within the first 2 months, after which it slowed considerably. It is proposed that outgassing of H_2 acted to inhibit diffusion of solubilized HT or T_2 into the bulk, thereby limiting increases in polymer T incorporation and thus damage rate. Damage to the HDPE sample was found to be nonuniform. Laser fluorescence from the sample surface irradiated by the supply of T_2 gas was $\int 10^3$-fold greater in the energy deposition layer than the fluorescence from bulk polymer after 2 months. This factor was within an order of magnitude of calculated dosages to surface and bulk. Fluorescence from the bulk, apparently caused by unsaturated polyene groups formed during irradiation, grew in time about proportionally to H_2 generation and thus dose. An appreciable concentration of radical or ion-radical polyenes at room temperature could be recombined by bleaching for 15 minutes at $\int 150$°C; these species appeared to reform over night at room temperature.

33439 A novel technique for measurement of tritium permeation through resistant materials near room temperature: demonstration of method with copper at 50-170°C. Maienschein, J.; Du Val, V.; McMurphy, F.; Uribe, F. (Lawrence Livermore National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 2, 2360-2365(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

To measure tritium permeation through low-permeability materials at 50-170°C, we use highly-sensitive liquid scintillation counting to detect the permeating tritium. To validate our method, we conducted extensive experiments with copper, for which much data exists for comparison. We report permeability of tritium through copper at 50, 100, and 170°C, and discuss details of the experimental technique. Further plans are outlined.

33440 Isotope effects and helium retention behavior in vanadium tritide. Bowman, R.C.; Attalla, A.; Craft, B.D. (Monsanto Research Corporation, Mound, Miamisburg, OH). *Fusion Technology;* 8: No. 2, 2366-2372(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

The relaxation times of the M, T, and ^{3}He nuclei have been measured in vanadium hydride and tritide samples. Substantial isotope effects in both the phase transition temperatures and diffusion parameters have been found. When compared to hydrides, the tritide samples have lower transition temperatures and faster mobilities. The differences in the occupancies of the interstitial sites are largely responsible for these isotope effects. Most of the helium atoms generated by tritium decay remain trapped in microscopic bubbles formed within the VT /sub x/ lattice. Evidence is presented for the gradual growth of the helium bubbles over periods of hundreds of days.

33441 Diffusion and solubility of tritium in Path A Prime Candidate Alloy. Causey, R.A.; Steck, L.M.; Van Namen, R. (Sandia National Laboratory, Livermore, CA). *Fusion Technology;* 8: No. 2, 2384-2387(Sep 1985). (CONF-850405—).

From 2. national topical meeting on tritium technology in fission, fusion and isotopic applications; Dayton, OH, USA (30 Apr 1985).

The tritium recoil injection technique was used to determine the tritium diffusion coefficient for Path A Prime Candidate Alloy (PCA) over the temperature range 323K to 523K. Dissolution tritium counting of samples saturated in a tritium-hydrogen mixture was used to determine the tritium solubility for PCA over the temperature range 673K to 973K. No evidence of high energy trapping due to the titanium carbide precipitates in PCA was seen.

33442 **ICRF technology development on the Princeton RF Test Facility.** Fortgang, C.M.; Hwang, D.Q. (McDonnell Douglas Corporation). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 61-64(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Dielectric filled rigid waveguide is being considered as a possible ICRF launcher for an ignition device.

33443 **ICRF antenna and feedthrough development at the Oak Ridge National Laboratory.** Owens, T.L.; Baity, F.W.; Hoffman, D.J. (Oak Ridge National Laboratory, Oak Ridge, Tennessee 37831). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 95-98(Jul 1985). (CONF-8505130—). Contract AC05-84OR21400.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Antennas, vacuum feedthroughs, Faraday shields, and antenna materials for application in the ICR frequencies have been analysed and tested. The emphasis on the RDL (resonant double loop) antenna.

33444 **Heating, current drive and transport properties of large area ICRF couplers.** Taylor, R.J.; Brown, M.; Evans, J.D.; Lai, K.F.; Rossing, V. (Center for Plasma Physics and Fusion Engineering, University of California at Los Angeles, California 90024). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 107-110(Jul 1985). (CONF-8505130—). Contract AM03-76SF00010.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

Initially, the large area ICRF couplers were studied in Macrotor in order to minimize the effects of the RF on the edge plasma and on the related transport. Recently, the following three aspects of these couplers have been studied. (1) Reduction of the edge power density by size alone. (2) Formation of a narrow K-parallel spectrum. (3) The utilization of this powerful technique for fast wave lower hybrid current drive generation. Current drive experiments in Macrotor have resulted in the prediction that a continuously driven tokamak operation can be achieved at a level that will be consistent with neo-Alcator scaling.

33445 **Arc inhibitors for lower hybrid waveguide arrays.** Motley, R.W.; Greene, G.J. (Plasma Physics Laboratory, Princeton University). *AIP (American Institute of Physics) Conference Proceedings;* **129**: No. 1, 170-173(Jul 1985). (CONF-8505130—). Contract AC02-76CH03073.

From 6. topical conference on radio frequency plasma heating; Pine Mountain, GA, USA (13 May 1985).

The discontinuity at the mouth of a phased array between waveguide fields and plasma fields gives rise to strong, localized electric fields at the septa, especially if the array is excited asymetrically. Methods are suggested for modifying these fields to reduce the possibility of arcing. Probe measurements of the fields near the septa show that small but significant reductions of the local fields are possible and might raise the maximum power handling capability of an array.

33446 **Comparison of pulsed and steady-state tokamak reactor burn cycles. Pt. 1. Thermal effects and lifetime limitations.** Ehst, D.A.; Cha, Y.; Hassanein, A.M.; Majumdar, S.; Misra, B.; Stevens, H.C. (Argonne National Lab., IL, USA. Fusion Power Program). *Nuclear Engineering and Design/Fusion;* **2**: No. 4, 305-318(Jul 1985).

Four distinct operating modes have been proposed for tokamaks, and consequently a variety of thermal environments can be postulated for future reactor subsystems. Our study concentrates on lifetime limitations associated with fluctuating thermal loads on the first wall, limiter or divertor plates, and in the breeding blanket. Simultaneous failure from thermal fatigue, radiation damage, and disruption-induced erosion is considered, and burn length goals are calculated in order to help achieve high availability for a commercial reactor. In addition, the cost of thermal storage is found as a function of the dwell period between burns of a pulsed cycle; thermal storage is shown to be an expensive requirement for pulsed reactors. (orig.).

33447 **Upgrade of MFTF-B for fusion technology.** Thomassen, K.I.; Doggett, J.N.; Logan, B.G.; Nelson, W.D. (Lawrence Livermore National Lab., CA, USA; Oak Ridge National Lab., TN, USA. Fusion Engineering Design Center). *Nuclear Engineering and Design/Fusion;* **2**: No. 3, 209-222(Mar 1985). Contract W-7405-ENG-48.

A deuterium-tritium (DT) burning upgrade to the MFTF-B tandem mirror that incorporates a high neutron flux test section in the central cell is described. This test section is a beam-driven simple mirror, where 11 MW of fusion power produces a neutron flux of proportional 2 MW/m². In this test section one can perform 100 h uninterrupted tests of the power and fuel cycle operation of fusion blankets. The tandem mirror in which this section is embedded in a scale down version of the MARS reactor. It uses 200 kV negative ion beams, an 18 T choke coil, drift pumping for removing α-ash and ions trapped in the barrier/transition, halo pumping, and biased end plates for potential control and direct conversion. There are two modes of operation in the device: one mode achieves the high neutron flux by injecting beams in the test section and reducing the end plug potential to accomodate the high throughput of particles; the other mode reduces the beam input to the minimum required for fueling and raises the end potentials to their highest possible values for good confinement. This two-mode operation is a unique feature of the tandem that allows a dual physics-nuclear technology role for the device. (orig.).

33448 **Fusion technology demonstration facility (TDF).** Doggett, J.N.; Logan, B.G.; Osher, J.E.; Thomassen, K.I.; Nelson, W.D. (Lawrence Livermore National Lab., CA, USA; Oak Ridge National Lab., TN, USA. Fusion Engineering Design Center). *Nuclear Engineering and Design/Fusion;* **2**: No. 3, 223-237(Mar 1985). Contract W-7405-ENG-48.

This paper describes a facility for generating engineering data on the nuclear technologies needed to build an engineering test reactor (ETR). The facility, based on a tandem mirror operating in the Kelley mode, could be used to produce a high neutron flux (1.4 MW/m²) on an 8 m² test area for testing fusion blankets. Runs of more than 100 hours, with an average availability of 30%, would produce a fluence of 5 MW.yr/m² and give the necessary experience for successful operation of an ETR. (orig.).

33449 **The integrated-blanket-coil concept applied to the poloidal field and blanket systems of a tokamak reactor.** Steiner, D.; Block, R.C.; Malaviya, B.K. (Rensselaer Polytechnic Institute, Department of Nuclear Engineering, Troy, NY). *Fusion Technology;* **7**: No. 1, 66-77(Jan 1985).

A novel concept is proposed for combining the blanket and coil functions of a fusion reactor into a single component. This concept, designated the "integrated-blanket-coil" (IBC) concept, is applied to the poloidal field and blanket systems of a tokamak reactor. An examination of resistive power losses in the IBC suggests that these losses can be limited to 10% of the fusion thermal power. By assuming a sandwich construction for the IBC walls, magnetohydrodynamic (MHD)-induced pressure drops and associated pressure stresses are shown to be modest and well below design limits. For the stainless steel reference case examined, the MHD-induced pressure drop was estimated to be about 1/3 MPa and the associated primary membrane stress was estimated to be about 47 MPa. The preliminary analyses indicate that the IBC concept offers promise as a means for making fusion reactors more compact by combining blanket and coil functions in a single component.

33450 **Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part I. A review of fundamentals of CHF and related data base.** Boyd, R.D. (Sandia National Laboratories, Albuquerque, NM). *Fusion Technology;* 7: No. 1, 7-30(Jan 1985).

The present understanding of critical heat flux (CHF) in subcooled flow boiling with water is reviewed and fusion reactor component high-heat flux (HHF) requirements are outlined. This survey (Parts I and II), which contains a representative coverage of the literature over the last 30 years, is concerned only with CHF in the subcooled flow boiling regime. CHF data base parameter ranges are also given as an aid for fusion component designers in locating the appropriate data for an application. Because of the relatively HHF levels and long pulse durations in the next generation reactors, fusion components must be actively cooled. All fusion components are heated nonuniformly over their surface and their surface area ranges from 0.1 to 1000 m^2. Although most components are subjected to fluxes from about 0.005 kW/cm^2 (first wall) to near 1 kW/cm^2 (limiters and divertors), some components are subjected to fluxes from 2 kW/cm^2 (first wall in compact reactors) to 8 kW/cm^2 (beam dumps). Subcooled flow boiling has the greatest potential of accommodating the steady-state HHF levels encountered by fusion reactor components. Although the available heat flux data base brackets those for most fusion components, the existing data are sparse or nonexistent for the length-to-diameter ratios (e.g., >200 for limiters and >50 for beam dumps) necessary for future HHF fusion components. There are more than 20 parameters that influence subcooled flow boiling CHF and many other tested techniques that enhance heat transfer by a factor of >2. The engineering implementation and design of fusion components cannot be optimized until the physical relationships between the maximum CHF and both the flow parameters and thermophysical properties have been determined. This can be accomplished only if improvements are made in the understanding of the fundamental mechanisms controlling the heat transfer and CHF in the subcooled flow boiling regime.

33451 **Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part II. A review of microconvective, experimental, and correlational aspects.** Boyd, R.D. (Sandia National Laboratories, Albuquerque, NM). *Fusion Technology;* 7: No. 1, 31-52(Jan 1985).

Microconvective, instability, experimental, and correlational aspects of subcooled flow boiling critical heat flux (CHF) are summarized. The present understanding of CHF in subcooled flow boiling is reviewed and research directions that will permit the accommodation of higher heat fluxes are outlined. This survey (Parts I and II), which contains a representative coverage of the literature over the last 30 years, is concerned only with CHF in the subcooled flow boiling regime, and unless otherwise noted, all references to CHF are confined to that regime.

33452 **Thermal analysis of the Tokamak Fusion Test Reactor vacuum vessel.** Fixler, S.Z.; Bialek, J.; Gilchrist, G.W. (Grumman Aerospace Corporation, Bethpage, NY). *Fusion Technology;* 7: No. 1, 111-124(Jan 1985).

A transient thermal analysis was conducted on the Tokamak Fusion Test Reactor vacuum vessel to determine the response of the vessel and its critical components to several pulsed discharge cleaning (PDC) and in situ bakeout scenarios. The three-dimensional model is described. The method of analysis, flow distribution, boundary conditions, and assumed configuration are stated. The resultant temperatures and thermal gradients are presented as a function of time and space on the vessel, bellows, bellows covers, ports, and port covers. Two PDC and three bakeout scenarios were analyzed. For nominal discharge cleaning, a 100-kW plasma with a 25-kW bellows ohmic heat (OH) dissipation was assumed. For aggressive discharge cleaning, a 400-kW plasma with a 100-kW bellows OH dissipation was assumed. In the first bakeout scenario a series of 56°C (100°F) temperature steps (ΔT) was imparted to the heating air at 10-h intervals until a bakeout temperature of 250°C was attained. In the second scenario the interval between steps was increased to 25 h. In the third scenario the temperature step (ΔT) was reduced to 28°C (50°F) at 10-h intervals between steps. The results of the analysis indicate that temperatures during initial operations can be maintained within allowable limits. A PDC maximum temperature of 232°C occurs on the bellows cover plates. The bakeout results show that for a 28°C step, 10-h interval, it takes 112 h to bake out the entire torus. Initial results of the thermal analysis enabled setting up in situ bakeout constraints that prevent excessive vessel/bellows stresses and minimized bakeout run times.

33453 **A 1-D hybrid code for FRM dynamics.** Stark, R.A.; Miley, G.H. (Naval Surface Weapons Center, Silver Springs, MD). pp 759-769 of Proceedings of an international meeting on advances in nuclear engineering computational methods. Volume 2. LaGrange Park, IL; American Nuclear Society (1985). (CONF-850411—).

From International meeting on advances in nuclear engineering computational methods; Knoxville, TN, USA (9 Apr 1985).

A 1-D radial hybrid code has been written to study the start-up of the FRM via neutral-beam injection. This code, named FROST (Field Reversed One-dimensional STart-up), models the plasma as azimuthal symmetric with no axial dependence. A multigroup method in energy and canonical angular momentum describes the large-orbit ions from the beam. This method is designed to be more efficient than those employing particle tracking, since the characteristic timescale of the simulation is the ion slowing down time, rather than the much shorter cyclotron period. A time-differentiated Grad-Shafranov equation couples the ion current to massless fluid equations describing electrons and low energy ions. Flux coordinates are used in this fluid model, in preference to an Eulerian framework, so that coupling of plasma at the two different radii of a closed flux surface may be treated with ease. Since a fluid treatment for electrons is invalid near a field null, a separate model for the electron current has been included for this region, a unique feature. Results of simulation of injection into a 2XIIB-like plasma is discussed. Electron currents are found to retard, but not prevent reversal of the magnetic field at the plasma center.

33454 **Negative ion beam requirements for compact tori.** Miley, G.H. (Fusion Studies Laboratory, University of Illinois, 103 S. Goodwin Ave., Urbana, Illinois 61801). *AIP (American Institute of Physics) Conference Proceedings;* **111**: No. 1, 647-658(1 Mar 1984). (CONF-831180—). Contract AC02-76ET52040.

From 3. international symposium on the production and neutralization of negative ions and beams; Upton, NY, USA (14 Nov 1983).

One potential application of negative ion beam sources involves injection into field-reversed fusion devices for both start-up and sustainment of plasma currents. High energies provide the prerequisite large orbit ions to drive these currents. A hybrid fluid-particle computational model is described that has been developed to study injection into a field-reversed mirror. Comparisons with the earlier experiments (2X-IIB) at the Lawrence Livermore National Laboratory are encouraging and support the concept of using high-energy injection in future devices.

33455 **Heavy-ion radiative capture.** Sandorfi, A.M. (Brookhaven National Lab., Upton, NY). pp 53-111 of Treatise on heavy-ion science. Vol. 2: fusion and quasi-fusion phenomena. Bromley, D.A. New York, NY; Plenum Press (1984).

This chapter discusses high-energy gamma decays to bound states and examines techniques for studying fusion followed by high-energy y decay. The experimental geometry used in the electrofission-coincidence experiments is shown. Fusion/fission resonances in Mg-24 and Si-28 are discussed, then compared with other reactions. A statistical model analysis of Mg-24 resonances is presented and the radiative capture in other heavy-ion systems is reviewed. Ultrasensitive particle identification systems are discussed which use an electrostatic accelerator as one element to detect nuclei with sensitivities as high as 1 part in 10^{15}.

33456 **New poloidal and toroidal crowbar systems in ETA-BETA II.** Piovan, R.; Guarnieri, M. (Istituto Gas Ionizzati del CNR, Associazione EURATOM-CNR, Padova). pp 1648 of Fusion engineering. Vol. 2. New York, NY; IEEE (1983). (CONF-831203—).

From 10. symposium on fusion engineering; Philadelphia, PA, USA (5 Dec 1983).

A new power crowbar system has been recently assembled in Eta-Beta II, both in the poloidal and in the toroidal circuits, in order to sustain and extend as long as possible the plasma pulse and to achieve an effective flat-top phase. Starting from plasma physical specifications, a crowbar system made with capacitor banks in a direct parallel connection for both circuits has been chosen since they were considered the most suitable in the concerned range of power and energy. Both systems include an original protection system of the main capacitor bank against casual or systematic dangerous currents and voltages. This protection system required a careful optimization of many involved component as capacitors, inductances and diodes. The main steps in the design of the systems is described and emphasis is given to the analysis of original problems which were solved, such as direct parallel connection of more ignitron series. Finally the tests performed on the circuits and components are presented and the performances of the systems are shown and discussed.

99 GENERAL AND MISCELLANEOUS

33457 (DOE/BC/10439—T1) Summer Research Apprentice Program report. Curington, B. (Northeastern Oklahoma State Univ., Tahlequah (USA)). 1982. Contract FG19-81BC10439. 5p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010598.

The Summer Research Apprentice Program is designed to provide students with their first look at college life while preparing them for possible careers in mathematics, science and engineering. The 23 students, enrolled as college freshmen for 8 hours of college credit, took courses in Trigonometry, College Algebra and introduction to Research (4 students were enrolled in Calculus 1 instead of Trigonometry and College Albebra). During this third year of operation, refinements were made in both the administration of the program and in the method of implementation.

33458 (ORNL/TM—9904) Protection of spacecraft from meteoroids and orbital debris. Fraas, A.P. (Oak Ridge National Lab., TN (USA)). Mar 1986. Contract AC05-84OR21400. 66p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86009996.

This report presents a review of information on the incidence of meteoroids and solid debris in orbital space, the damaging effects of these materials, and the principles that may be used to design protective shields for orbiting spacecraft. The report was prepared as part of a current Oak Ridge National Laboratory effort to develop and evaluate conceptual designs of space power systems.

33459 (UCID—20735) Appropriate MAWP static gas load for launching grenades from the M-16, A-1 rifle. Morgan, B. (Lawrence Livermore National Lab., CA (USA)). 12 Mar 1986. Contract W-7405-ENG-48. 17p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010260.

Launching small grenades from the muzzle of a service rifle constitutes an abnormal use of standard propellants used in loading ammunition. An analysis of system strength capabilities, types and characteristics of mechanical loading, appropriate safety factors and the energy producing characteristics of various propellant types is needed to better understand how this might be done safely. Then specific propellant loading recommendations are made based on these findings.

33460 (UCRL—94404) Calendars in IFPS/personal. Mode, V.A. (Lawrence Livermore National Lab., CA (USA)). 9 Apr 1986. Contract W-7405-ENG-48. 11p. (CONF-8606110—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86009602.

From IFPS Users Association meeting; San Francisco, CA, USA (9 Jun 1986).

The use of the Julian period allows the simple calculation of linear calendar dates and date intervals. It has been possible to write simple Gregorian-Julian and Julian-Gregorian calendar algorithms for use with IFPS/Personal. The ability to make a direct date calculation in a single expression, without reference to tables or other functions, is a significant improvement over other techniques published previously.

9901 Management

33461 (AD-A—164146/3/XAB) USS Pueblo incident, warning cycle. Master's thesis. Koebke, K.D. (Defense Intelligence Coll., Washington, DC (USA)). 10 Sep 1984. 161p. NTIS, PC A08/MF A01.

The basic method used in the study was a historical examination of the Warning cycle and a quantitative evaluation of three portions of the cycle, i.e., risk assessment, the actual warning, and the communications. Risk assessment was defined so that it met the Joint Chiefs of Staff (JCS) criteria standard and was informative to all units up the chain of command with a single point of contact. The warning portion of the cycle was defined in terms of a single point of contact and its responsiveness to the system. Communications effectiveness was assessed using a 10 minute criteria for a net to be responsive to a Critic/Pinnacle message. The procedures that were actually used during the crisis were compared to the standards set by the definitions.

33462 (LA—10651) Symphony Time Accounting Resource (STAR). Newfield, S.E.; Booth, J.W.; Redman, D.L. (Los Alamos National Lab., NM (USA)). May 1986. Contract W-7405-ENG-36. 9p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86008028.

The Symphony Time Accounting Resource, a new time accounting system, that can be run on personal computers instead of computer mainframes is described. This new system is useful for organizations that do work under several job order numbers and/or accounting codes and could also be adapted for use by organizations on the recharge system. 1 fig., 2 tabs.

33463 (BARC—1274) PLOT 3D: a multipurpose, interactive program for plotting three dimensional graphs. Jayaswal, B. (Bhabha Atomic Research Centre, Bombay (India)). 1985. 56p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86702101.

PLOT3D is a general purpose, interactive, three dimensional display and plotter program. Written in Fortran-77, it uses a two dimensional plotter software (PLOT-10) to draw orthographic axonometric projection of three dimensional graph comprising of smooth surface or cubical histogram, in any desired orientation, magnification and window, employing throughout highly accurate hidden lines removal techniques. The figure, so generated, can optionally be clipped, smoothened by interpolation, or shaded selectively to distinguish among its different faces. The program accepts data from an external file, or generates them through built-in functions. It can be used for graphical representation of data such as neutron flux, theta(x,y) in form of smooth surface, even if available data are very few in number. It is also capable of drawing histograms of quantities such as fuel power in a reactor lattice. Listing of the program is given.

33464 (CEA-N—2446) Numeric experiments on the Cray X-MP/48. Chauvet, Y.; David, J.; Meurant, G. (CEA Centre d'Etudes de Limeil, 94 - Villeneuve-Saint-Georges (France)). Jun 1985. 58p. (In French). NTIS (US Sales Only), PC A04/MF A01. File Number DE86751823.

In this paper, evaluation tests for the CRAY X-MP/48 are presented. We use parallel algorithms for solving the transport equation with Monte-Carlo and the conjugate gradient method for solving linear systems.

33465 (CONF-860678—1) Formal verification of properties of digital systems using an automated reasoning system. Kljaich, J.; Wojcik, A.S.; Smith, B.T. (Argonne National Lab., IL (USA); Michigan State Univ., East Lansing (USA). Dept. of Computer Science). 1986. Contract W-31-109-ENG-38. 15p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86005552.

From Design automation conference; Las Vegas, NV, USA (29 Jun 1986).

This paper describes a part of an ongoing research project whose goal is to develop a formal design verification system based on the use of ITP, an LMA (Logic Machine Architecture) based Interactive Theorem Prover developed at Argonne National Laboratory. Specifically, a Petri net representation for systems is described together with the ITP implementation of a rule-based system for the manipulation of system descriptions. To illustrate the representation and the capabilities of the system under development, the Draper Laboratories Fault-Tolerant Processor is used as an example. Results concerning the formal verification of the fault-tolerant properties of this system are described. 17 refs., 7 figs.

33466 (DOE/AL/26034—T4) Study for establishment of the Rio Grande Communications Network connecting federal, state and private facilities in New Mexico. (New Mexico Technet, Inc., Albuquerque (USA)). 30 Apr 1986. Contract FG04-84AL26034. 14p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010334.

A computer network which provides interconnections to Los Alamos National Laboratory, the New Mexico State Government Data and Communications Center in Santa Fe, the Albuquerque Operations Office of the Department of Energy, and New Mexico State University is described. The goals of the network are to facilitate technology transfer from the federal laboratories to the university community and the private sector and to attract new businesses or assist in the expansion of existing businesses to broaden the state tax base. Future plans call for new connections to the University of New Mexico and Sandia National Laboratory. Initial service offerings of the network are electronic mail, communications, bulletin board, financial/statistical data modeling, and external data base access. The financial status of the network is also presented. (DWL)

33467 (EGG-M—26585) Comments on achievable eigenvectors. Griffith, J. (Idaho National Engineering Lab., Idaho Falls (USA)). 1986. Contract AC07-76ID01570. 14p. (CONF-860638—1). NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86003228.

From American control conference; Seattle, WA, USA (18 Jun 1986).

Eigenstructure control concepts work well if the feedback designer possesses a deep understanding of the physical system to be controlled. With other systems the designer may have some difficulty in selecting appropriate "desired" eigenvectors. Physical system characteristics may place constraints on the "achievable" eigenvectors which are not obvious to the control system designer; these constraints can complicate the design process. However, achievable eigenvectors must lie within the column space of an easily computed matrix. It is found that examining the singular value decomposition of this matrix helps one understand a physical system and appreciate what can be accomplished with feedback control. An example problem illustrates the idea and shows that the decomposition may broaden the range of control systems which are easily designed with the eigenstructure approach. 10 refs., 6 figs.

33468 (GEPP-TIS—961) Implementation of disk sharing between two network management consoles on an Ungermann-Bass local area network. Kaplan, C.S.; Farr, D. (General Electric Co., Largo, FL (USA). Neutron Devices Dept.). 28 Apr 1986. Contract AC04-76DP00656. 11p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010265.

In a large Ungermann-Bass Local Area Network (LAN), the network management console (NMC) poses several administrative problems. With over 1500 ports, network reloads and software backups require unacceptable periods of time. If the NMC suffers fatal hardware errors, it takes two hours to rebuild the Net/One software and restore network load files from floppy diskettes. If the network interface unit card in the NMC has failed, the network is left without a management console unless a spare is available. To eliminate these problems a separate personal computer (PC) network has been installed. The PC network consists of a central file server connected to two NMC workstations. Using this redundant system configuration, two NMCs can do network reloads simultaneously from the same data base, or network administrative functions can be done on one NMC while the other stays in download server mode.

33469 (INS-P—163) Potassium-argon age calculations. A revised evaluation of analytical errors. Hulston, J.R. (Department of Scientific and Industrial Research, Lower Hutt (New Zealand). Inst. of Nuclear Sciences). Jun 1984. 20p. NTIS (US Sales Only), PC A02/MF A01. File Number DE86702205.

The potassium-argon method of dating rocks and minerals is summarised. The equations of the age calculation, when the mass spectrometer argon-38 isotope dilution technique is used, are described and the analytical errors evaluated. It is found that the error analysis described in the most commonly used textbook gives error estimates which are satisfactory for most samples but are excessively low for small young samples. A Vax-BASIC program ARGON is described which accepts mass spectrometer peak height information together with potassium content and other relevant information and calculates the age and analytical error. A secondary file is produced which provides a summary table of results. 4 refs; 2 figs; 3 tables.

33470 (IPEN-Pub—72) Acceleration of the nodal program FERM. Nakata, H. (Instituto de Pesquisas Energeticas e Nucleares, Sao Paulo (Brazil)). 1985. 14p. (In Portuguese). NTIS (US Sales Only), PC A02/MF A01. File Number DE86702102.

Acceleration of the nodal FERM was tried by three acceleration schemes. Results of the calculations showed the best acceleration with the Tchebyshev method where the savings in the computing time were of the order of 50%. Acceleration with the Asymptotic Source Extrapoltation Method and with the Coarse-Mesh Rebalancing Method did not result in any improvement on the global computational time, although a reduction in the number of outer iterations was observed.

33471 (LA-UR—86-1151) Hypercube project and a simulator for a hypercube of computers. Hong, J.P.; Tomlinson, R.D.; Patel, N.; Pollard, L.H. (Los Alamos National Lab., NM (USA)). 1985. Contract W-7405-ENG-36. 9p. (CONF-8508173—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010164.

From Conference on hypercube microprocessors; Knoxville, TN, USA (1 Aug 1985).

The Los Alamos National Laboratory and the University of New Mexico are working on HC, a hypercube project for large problems. A hypercube of 1024 nodes is being designed; implementation of a machine of at least 16 nodes is underway. The nodes of the machine are complete computer systems, including mass storage and a large main memory. The computational abilities of each node are enhanced by using a detached instruction fetch-execute-store organization. This allows the execution rate to achieve a consistently high level, approaching 90% of optimum. Trade-offs in the implementation methods indicate the speeds available with acceptable hardware investments. A simulator has been written which allows execution of high level programs on a hypercube organization. The simulator has shown that programs prepared for execution on a single stream machine can be easily modified to use the resources of a parallel machine, and that the results are identical to previous executions. 20 refs., 3 figs.

33472 (LA-UR—86-1176) Text and graphics at Los Alamos: a system viewpoint. Vigil, M.; Bouchier, S.C. (Los Alamos National Lab., NM (USA)). 1986. Contract W-7405-ENG-36. 8p. (CONF-8604177—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86010169.

From ACM mountain regional conference; Santa Fe, NM, USA (11 Apr 1986).

At Los Alamos National Laboratory, a computerized document preparation system is being developed to produce publication-quality documents integrating text and graphics. Mixing text and graphics involves a combination of two different technologies; thus the project has presented numerous and interesting challenges. The requirements, issues, solutions, and continuing concerns of the system development are described. The particular challenges encountered in fitting the document system into the Laboratory's diverse computing network are explained. The paper itself is an example of the type of document the system can produce. 3 figs.

33473 **(LA-UR—86-1288) Machine learning using a higher order correlation network.** Lee, Y.C.; Doolen, G.; Chen, H.H.; Sun, G.Z.; Maxwell, T.; Lee, H.Y. . (Los Alamos National Lab., NM (USA); Maryland Univ., College Park (USA)). 1986. Contract W-7405-ENG-36. 41p. (CONF-8605108—1). NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010183.

From Evolution, games, and learning conference; Los Alamos, NM, USA (20 May 1986).

A high-order correlation tensor formalism for neural networks is described. The model can simulate auto associative, heteroassociative, as well as multiassociative memory. For the autoassociative model, simulation results show a drastic increase in the memory capacity and speed over that of the standard Hopfield-like correlation matrix methods. The possibility of using multiassociative memory for a learning universal inference network is also discussed. 9 refs., 5 figs.

33474 **(NEANDC(E)—231/L) Solution of ordinary differential equations using power series with decomposed coefficients. Part 1. Mathematical analysis.** Schett, A.; Collin, M.; Perrier, R. (CEA Centre d'Etudes de Bruyeres-le-Chatel, 92 - Montrouge (France)). Oct 1985. 139p. (INDC(FR)—64/L). NTIS (US Sales Only), PC A07/MF A01. File Number DE86901284.

The solution functions of systems of ordinary differential equations are represented in form of power series of which the coefficients C/sub n/ are decomposed into three parts C/sub n/ = (A.B.V)/sub n/: A reflects the form of the system, B its strength of coupling and V the initial values. The component A and in most practical cases also the component B remain constant during integration. Recurrence relations for the key-component A are derived for various types of systems. They have the form A/sub n+1/ = f/(A/sub n/). The knowledge of A/sub n/permits a direct, non-recursive computation of the component B and V. This decomposition of the coefficients C/sub n/ permits economical integration of a system (computation of V only instead of C/sub n/ as a whole at each integration step, reduction of coefficients to be computed owing to identities resulting from symmetries of the system), is convenient due to its transparency (intervention on B does not affect A and in most cases also not V), and reveals interesting mathematical information (mathematical significance of A). The formalism is illustrated by examples. 25 refs., 18 tabs.

33475 **(ORNL/TM—9919) Development and evaluation of DOTTOR, a computer code to couple two-dimensional to three-dimensional discrete ordinates calculations.** Thompson, J.L.; Emmett, M.B.; Dodds, H.L. Jr. (Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC05-84OR21400. 83p. NTIS, PC A05/MF A01; GPO Dep. File Number DE86010081.

A method has been developed to couple two-dimensional (2-D) to three-dimensional (3-D) discrete ordinates transport calculations. This method is useful for problems in which a 3-D Cartesian (X-Y-Z geometry) region of interest is very far from a point source. A 3-D solution from the source including the region of interest is prohibited due to the large computing cost of such calculations. The problem is solved by first performing a 2-D discrete ordinates calculation from the source past the region of interest. The results of the 2-D calculations are transformed into a boundary condition on the surface of the 3-D region of interest. This transformation or coupling method is developed and implemented in the DOTTOR computer code. The boundary condition is then used for a subsequent 3-D discrete ordinates calculation in the region of interest. Simple test problems were used to evaluate the accuracy and speed (i.e., computing cost) of the DOTTOR code. The evaluation indicates that the DOTTOR code produces accurate results with acceptable computing costs. The algorithm chosen showed a significant speed advantage over others tested when applied to large problems. 9 refs., 13 refs., 8 tabs.

33476 **(ORNL/TM—9962) Sparse Cholesky factorization on a local-memory multiprocessor.** George, A.; Heath, M.T.; Liu, J.; Ng, E. (Oak Ridge National Lab., TN (USA)). Apr 1986. Contract AC05-84OR21400. 22p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010082.

The problem of factoring a large sparse positive definite matrix is implemented on a multiprocessor system. The processors are assumed to have substantial local memory but no globally shared memory. They communicate among themselves and with a host processor through message passing. The primary interest is in designing an algorithm which exploits parallelism, rather than in exploiting features of the underlying topology of the hardware. However, part of the study is aimed at determining, for certain sparse matrix problems, whether hardware based on the binary hypercube topology adequately supports the communication requirements for such problems. Numerical results from experiments running on a multiprocessor simulator are included. 20 refs., 7 figs., 5 tabs.

33477 **(ORNL/TM—9966) Message-passing multiprocessor simulator.** Dunigan, T.H. (Oak Ridge National Lab., TN (USA)). May 1986. Contract AC05-84OR21400. 31p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010076.

The structure and use of a message-passing multiprocessor simulator are described. The simulator provides a multitasking environment for the development of algorithms for parallel processors using either shared or local memories. The simulator may be used from C or FORTRAN and provides a library of subroutines for task control and message passing. The simulator produces a trace file that can be used for debugging, performance analysis, or graphical display. 9 refs., 7 figs.

33478 **(RHO-FI-SA—6-P) Communicating with the IBM-PC on the Xerox Ethernet local area network.** Jacobsen, P.H. (Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations). Feb 1986. Contract AC06-77RL01030. 17p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86009842.

Topics covered in these viewgraphs are equipment needed and conditions necessary for communications, software and interface board capabilities, installation of the system, transferring files between the IBM PC and the Xerox system, and converting file type to ASCII format. (DWL)

33479 **(SAND—86-0037) Set of FORTRAN routines for multitask timing analysis on shared memory machines.** Montry, G.R. (Sandia National Labs., Albuquerque, NM (USA)). 31 Mar 1986. Contract AC04-76DP00789. 43p. NTIS, PC A03/MF A01; 1; GPO Dep. File Number DE86010310.

A set of FORTRAN-based timing routines has been written for shared memory parallel processors. These routines are designed to measure the performance of multitasking codes on machines with different hardware configurations. Complete run-time histories of all executing tasks are provided in a postmortem summary. The package is able to provide both processing time and elapsed time statistics for each task subject to functional hardware constraints. Source code for the ELXSI 6400 version of the package is included in an Appendix. 3 refs., 4 figs.

33480 **(SAND—86-0378) Guidelines for computer software development in Directorate 1500.** Rottler, J.S.; Gilkey, A.P.; Hopkins, P.L. (Sandia National Labs., Albuquerque, NM (USA)). Apr 1986. Contract AC04-76DP00789. 23p. NTIS, PC A02/MF A01; GPO Dep. File Number DE86010312.

Guidelines for writing uniform FORTRAN programs and the associated documentation are described. The goal of these programming guidelines is to aid in producing well structured and ac-

curately documented programs which will facilitate future software modifications and transitions to new operating systems. These guidelines have been divided into three categories. The first describes key ideas that relate to the software development process, the second describes guidelines for writing documentation, and the third describes programming conventions. 8 refs.

33481 **(SAND—86-0525) GRAPH III: a digitizing and graph plotting program.** Selleck, C.B. (Sandia National Labs., Albuquerque, NM (USA)). Mar 1986. Contract AC04-76DP00789. 59p. NTIS, PC A04/MF A01; GPO Dep. File Number DE86010628.

GRAPH is an interactive program that allows the user to perform two functions. The first is to plot two dimensional graphs and the second is to digitize graphs or plots to create data files of points. The program is designed to allow the user to get results quickly and easily. It is written in RATIV (a FORTRAN preprocessor) and is currently in use at Sandia under VMS on a VAX computer and CTSS on a Cray supercomputer. The program provides graphical output through all of the Sandia Virtual Device Interface (VDI) graphics devices. 2 refs., 3 figs., 3 tabs.

33482 **(UCID—20546) Supplement to PADL-2 user's manual, PADL-2/CRAY-1 version.** Kalibjian, J.R. (Lawrence Livermore National Lab., CA (USA)). 7 Feb 1986. Contract W-7405-ENG-48. 13p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010261.

This report is a supplement to the "PADL-2 User's Manual," published by the Production Automation Project at the University of Rochester in May 1983. It documents the changes made to the PADL-2 (Part and Assembly Description Language) user interface to adapt it to the LTSS operating system on the CRAY-1 at the Lawrence Livermore National Laboratory. 9 refs., 2 figs.

33483 **(UCID—20643) User systems guidelines for software projects.** Abrahamson, L. (ed.). (Lawrence Livermore National Lab., CA (USA)). 1 Apr 1986. Contract W-7405-ENG-48. 157p. NTIS, PC A08/MF A01; 1; GPO Dep. File Number DE86010490.

This manual presents guidelines for software standards which were developed so that software project-development teams and management involved in approving the software could have a generalized view of all phases in the software production procedure and the steps involved in completing each phase. Guidelines are presented for six phases of software development: project definition, building a user interface, designing software, writing code, testing code, and preparing software documentation. The discussions for each phase include examples illustrating the recommended guidelines. 45 refs. (DWL)

33484 **(UCID—20645-Rev.1) Math and statistics bulletin board user's guide. Revision 1.** Perra, J.J.; Seager, M.K.; Short, C.M. (Lawrence Livermore National Lab., CA (USA)). 23 Apr 1986. Contract W-7405-ENG-48. 18p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010263.

This user's guide describes the nature scoped of the bulletin board, the software available for downloading, file transfer procedures, and restriction of access to proprietary software. Specific information is provided on running the bulletin board. This information includes setting up hardware and software, starting the emulator, dialing in to the bulletin board, using the main menu, sending and receiving personal and broadcast mail, and listing, downloading, and uploading routines.

33485 **(UCID—20746) History of the Wilson-Fowler spline.** Fritsch, F.N. (Lawrence Livermore National Lab., CA (USA)). Apr 1986. Contract W-7405-ENG-48. 16p. NTIS, PC A02/MF A01; 1; GPO Dep. File Number DE86010264.

The Wilson-Fowler spline (abbreviated WF-spline) was introduced in the early 1960's as a means for drawing a smooth curve through a planar set of data. It has been used as the spline entity in the APT system's TABCYL since its inception. The history of the WF-spline is briefly described and a chronologically arranged annotated bibliography of all known references to it are featured. 6 refs.

33486 **(UCRL—93581) Shadows for bump-mapped surfaces.** Max, N.L. (Lawrence Livermore National Lab., CA (USA)). 5 Nov 1985. Contract W-7405-ENG-48. 14p. (CONF-8604167—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86009721.

From Tokyo meeting on computer graphics; Tokyo, Japan (22 Apr 1986).

Bump mapping produces realistic shading by perturbing normal vectors to a surface, but does not show the shadows that the bumps cast on nearby parts of the same surface. In this paper, these shadows are found from precomputed tables of horizon angles, listing, for each position entry, the elevation of the horizon in a sampled collection of directions. These tables are made for bumps on a standard flat surface, and then a transformation is developed so that the same tables can be used for an arbitrary curved parameterized surface patch. This necessitates a new method for scaling the bump size to the patch size. 7 refs., 8 figs.

33487 **(UCRL—94000) Time integration and conjugate gradient methods for the incompressible Navier-Stokes equations.** Gresho, P.M. (Lawrence Livermore National Lab., CA (USA)). Jan 1986. Contract W-7405-ENG-48. 25p. (CONF-860681—1). NTIS, PC A02/MF A01; GPO Dep. File Number DE86007177.

From 6. international conference on finite elements in water; Lisbon, Portugal (1 Jun 1986).

This paper addresses one class of iterative methods that are promising for cost effective Navier-Stokes simulations. The approach is based on the conjugate gradient (CG) method for solving linear algebraic systems with a symmetric positive-definite (SPD) matrix. These methods have many important characteristics: monotone convergence (in an appropriate error norm), optimal error minimization, finite termination, the direct exploitation of sparseness in the matrix, and no need to estimate "iteration parameters." 46 refs., 1 tab. (DWL)

33488 **(UFRJ-COPPE-PEN—131) Application of the explicit method for analysing intersystem dependencies in the evaluation of event trees.** Oliveira, L.F.S. de; Frutuoso e Melo, P.F.F.; Lima, J.E.P.; Stal, I.L. (Rio de Janeiro Univ. (Brazil). Coordenacao dos Programas de Pos-graduacao de Engenharia). 1985. 61p. NTIS (US Sales Only), PC A04/MF A01. File Number DE86702105.

A computational application of the explicit method for analyzing event trees in the context of probabilistic risk assessments is discussed. A detailed analysis of the explicit method is presented, including the train level analysis (TLA) of safety systems and the impact vector method. It is shown that the penalty for not adopting TLA is that in some cases non-conservative results may be reached. The impact vector method can significantly reduce the number of sequences to be considered, and its use has inspired the definition of a dependency matrix, which enables the proper running of a computer code especially developed for analysing event trees. The code has been extensively used in the Angra 1 PRA currently underway. In its present version it gives as output the dominant sequences for each given initiator, properly classiying them in core-degradation classes as specified by the user.

33489 **A 32-bit FASTBUS computer.** Blossom, J.M.; Hong, J.P.; Kellner, R.G. (Los Alamos National Lab., E-10 Data Systems, MS K488, Los Alamos, NM 87545). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—).

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

Los Alamos National Laboratory is building a 32-bit FASTBUS computer using the NATIONAL SEMICONDUCTOR 32032 central processing unit (CPU) and containing 16 million bytes of memory. The board can act both as a FASTBUS master and as a FASTBUS slave. It contains a custom direct memory access (DMA) channel which can perform 80 million bytes per second block transfers across the FASTBUS. The FASTBUS interface is based on programmable array logic.

33490 FASTRUN - a high performance computing device for molecular mechanics using a pipeline architecture. Dimmler, D.G.; Fine, R. (Brookhaven National Lab., Upton, NY 11973-5000). *IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science;* **NS-33**: No. 1, vp(Feb 1986). (CONF-851009—). Contract AC02-76CH00016.

From IEEE nuclear science symposium; San Francisco, CA, USA (23 Oct 1985).

A deep, synchronous pipeline architecture has been selected for a computing device with a power of 500 Million floating point operations per second (MFlops). The device calculates the forces and energy due to pair-wise interactions of many objects in a system. Considerations relating to application specific high-performance computer architectures are addressed. In addition, topics specifically relating to very deep, synchronous unidirectional pipelines are discussed. A key element of the device, a quadratic interpolator based on a lookup table, has been developed and tested. Five of these interpolators with a total computing power of 280 Mflops will be employed in the device.

9903 Information Handling

33491 (DOE/MA—0048/4) Information technology resources long-range plan, FY 1987-FY 1991. (USDOE Assistant Secretary for Management and Administration, Washington, DC. Office of Computer Services and Telecommunications Management). Dec 1985. 228p. NTIS, PC A11/MF A01; GPO Dep. File Number DE86010457.

Objective of this Plan is to describe the information technology resources and capabilities of the Department, the future requirements, and the strategies and plans to satisfy the identified requirements. The long-range planning process provides the systematic means to meet this objective and assists the Department in assuring that information technology support is provided in an efficient, effective, and timely manner so that the programmatic missions can be accomplished. Another objective of the Plan is to promote better understanding, both within and external to the Department, of its information technology environment, requirements, problems, and recommended solutions. The Plan covers the five-year period from fiscal year 1987 through 1991. It takes into consideration the information technology resource requirements of more than 52 different Departmental components and contractors. The IS section and resource identification is limited to business and project management type applications used by Departmental components.

33492 Use of selected toxicology information resources in assessing relationships between chemical structure and biological activity. Wassom, J.S. (Oak Ridge National Lab., TN). *Environmental Health Perspectives;* **61**: 287-294(Sep 1985).

This paper addresses the subject of the use of the selected toxicology information resources in assessing relationships between chemical structure and specific end points. To assist the researcher in how to access the primary literature of genetic toxicology, teratogenesis, and carcinogenesis, three specific specialized information centers are discussed - Environmental Mutagen Information Center, Environmental Teratology Information Center, and Environmental Carcinogenesis Information Center. Also included are descriptions of information resources that contain evaluated (peer-reviewed) biological research results. The US Environmental Protection Agency Genetic Toxicology Program, the International Agency for Research on Cancer Monographs, and the Toxicology Data Bank are the best sources currently available to obtain peer-reviewed results for compounds tested for genotoxicity, carcinogenicity, and other toxicological end points. The value of published information lies in its use. It has become evident that most information cannot be accepted at face value for interpretation and analysis when subjected to stringent quality evaluation criteria. This deficit can be corrected by rigid editorship and the cognizance of authors. Increased interest in alternative methods to in vivo animal testing will be exemplified by use of short-term bioassays and in structure-activity relationship studies. With respect to this latter area, it must be remembered that mechanically (computer generated) derived data cannot substitute, at least at this stage, for data obtained from actual animal testing. The future of structure-activity relationship studies will rest only in their use as a predictive tool.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, report literature is indexed using the name of the organization or institution responsible for issuing the report. Headings are provided for all report literature and for published literature for which a corporate approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate heading gives the document title and the volume and abstract numbers. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German, are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes.

DOE Energy Data Base: Corporate Author Entries (DOE/TIC-4585) is used in the standardization of corporate entries. DOE/TIC-4585 is available for purchase from the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22161.

Advanced commercial survey methods (COMSURV). Volume 1. Demonstration of tailored versus general questionnaires. Final report, 11:31998 (R;US)

Applied Optics Research, Albuquerque, NM (USA)
Analysis of FEL optical systems with grazing incidence mirrors, 11:32423 (R;US)

APS-Materials, Inc., Dayton, OH (USA)
Infrared video thermography as a diagnostic tool for arc-plasmas: the potential for real time control, 11:32152 (R;US)

Argonne National Lab., Evanston, IL (USA)
Collapse of defect cascades to dislocation loops, 11:32166 (R;US)
Simulation of fusion reactor conditions for superconducting magnet materials, 11:32417 (R;US)

Argonne National Lab., Idaho Falls, ID (USA)
Summary of the Hot Fuel Examination Facility's Neutron Radiography Reactor's first eight years, 11:31843 (R;US)
Argonne National Lab., IL (USA)
1985 annual site environmental report for Argonne National Laboratory, 11:32763 (R;US)
Additional measurements of the radiation environment at the Los Alamos Spallation Radiation Effects Facility at LAMPF, 11:32576 (R;US)
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders, 11:33399 (R;US)
anti pp options for the supercollider: proceedings, 11:32589 (R;US)
Are the Dirac strings harmless, 11:33046 (R;US)
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)
Chemical properties of radon, 11:32345 (R;US)
Chemical Technology Division annual technical report, 1985, 11:31965 (R;US)
Comparison of results of 200- and 500-h exposures of silicon carbide to a slagging coal gasification environment, 11:31295 (R;US)
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
Cumulative impacts: real or imagined, 11:31980 (R;US)
Distance dependent rates of photoinduced charge separation and dark charge recombination in fixed distance porphyrin-quinone molecules, 11:32367 (R;US)
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy, 11:32164 (R;US)
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy, 11:32162 (R;US)
Elastic properties of $LaNbO_4$, 11:32251 (R;US)
Estimates of the value of carbon dioxide from the Great Plains Coal Gasification Plant, 11:31374 (R;US)
Experimental alteration of basalt glass applied to the alteration of nuclear waste glass, 11:32250 (R;US)
Exploratory studies on deep earth sources of methane: Hg as a diagnostic and prospecting tool. Annual report, April-September 1985. Report No. 2, 11:31457 (R;US)
Formal verification of properties of digital systems using an automated reasoning system, 11:33465 (R;US)
Fuel price projections by end-use sector for Illinois. Revision, 11:32026 (R;US)
Influence of temperature and lithium purity on corrosion of ferrous alloys in a flowing lithium environment, 11:32167 (R;US)
Instability characteristics of fluidelastic instability of tube rows in crossflow, 11:31841 (R;US)
Integral Fast Reactor concept, 11:31842 (R;US)
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint, 11:31840 (R;US)
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)
Local planning and the electric power industry: lessons from the San Gorgonio Pass, 11:31770 (R;US)
Methods of chemical analysis for selected species in marble and limestone surfaces exposed to the acidic outdoor environment, 11:32327 (R;US)
Modeled trends and climatological variability of the net transboundary mass flux of airborne sulfur between the United States and Canada, 11:32710 (R;US)
NDE of stainless steel and on-line leak monitoring of LWRs. Annual report, October 1984-September 1985. Volume 2, 11:31948 (R;US)
Near term and long term materials issues and development needs for plasma interactive components, 11:33395 (R;US)
Overview of transport mechanisms in β-lithium/aluminum, 11:32170 (R;US)
Possibility of obtaining coherent short wave radiation from a solid state free electron laser, 11:32450 (R;US)
Potential applications of NbN composites in fusion reactor magnets, 11:32416 (R;US)
Preliminary assessment of costs and risks of transporting spent fuel by barge, 11:31482 (R;US)
Recent results on the preparation and properties of Li-containing Cu alloys, 11:33397 (R;US)
Some important elk-forest habitat relationships for Western Oregon and Washington, 11:32751 (R;US)
Thermal conductivity of mixed beryllia/Li ceramic in sphere-pac forms, 11:33396 (R;US)
Arizona Solar Energy Research Commission, Phoenix (USA)
Geothermal resource evaluation of the Yuma area, 11:31762 (R;US)
ARS Group, Inc., Wellesley, MA (USA)
Economic-screening guidebook for cogeneration in buildings. Report for January 1983-November 1985, 11:32073 (R;US)
Arvin Calspan, Buffalo, NY (USA). Applied Technology Group
Research on turbine flowfield analysis methods. Final report, 1 April 1983-30 November 1984, 11:32462 (R;US)
Asahi Glass Co. Ltd., Tokyo (Japan)
Uranium manufacturing process employing the electrolytic reduction method, 11:32217 (TG;US)
Association Euratom-CEA, Centre d'Etudes Nucleaires de Fontenay-aux-Roses, 92 (France). Dept. de Recherches sur la Fusion Controlee
Charged fusion products in a Tokamak, 11:33295 (R;FR;In French)
Gas heating effects in the neutralisers of neutral beam injection lines, 11:33297 (R;FR)
Thermal stability of a thermonuclear plasma for different confinement scaling laws, 11:33296 (R;FR)
Association of Collegiate Schools of Architecture, Washington, DC (USA)
Architecture, energy and education. Case studies in the evaluation of the teaching passive design in architecture workbook series, 11:32067 (R;US)
Astronautics Technology Center, Madison, WI (USA)
Measurement of performance limits in cryogenic heat pipes, 11:32424 (R;US)
Atkins (W.S.) and Partners, Epsom (UK)
Installation of a direct fired Lanham bread baking system. A demonstration at Family Loaf Bakery Ltd. [Bristol], 11:32099 (R;GB)
Atomic Energy of Canada Ltd., Chalk River, Ontario. Chalk River Nuclear Labs.
Computation of two-dimensional isothermal flow in shell-and-tube heat exchangers, 11:32463 (R;CA)
Atomic Energy of Canada Ltd., Pinawa, Manitoba. Whiteshell Nuclear Research Establishment
Canadian Nuclear Fuel Waste Management Program. Annual report, 1984, 11:31491 (R;CA)
Geophysical methods for evaluation of plutonic rocks, 11:32884 (R;CA)
Atomics International, Canoga Park, CA (USA)
Conductive heat transfer with a radiation boundary condition, 11:32470 (R;US)
Atominstitut der Oesterreichischen Universitaeten, Vienna
Simulation of fusion reactor conditions for superconducting magnet materials, 11:32417 (R;US)
Atomova Elektraren Bohunice, Jaslovske Bohunice (Czechoslovakia)
Economics, operating reliability and safety of WWER-440 type nuclear power plants. Part I. Preprints of papers, 11:31813 (R;CS;In Slovak and Czech)
Australian Atomic Energy Commission Research Establishment, Lucas Heights
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
Australian Coal Industry Research Labs. Ltd., North Ryde
Preliminary investigations into fine coal dense medium cyclone processing, 11:31355 (R;AU)
Avco-Everett Research Lab., Everett, MA (USA)
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
Azerbajdzhanskij Gosudarstvennyj Univ., Baku (USSR)
To the problem on a nature of the G(1590) meson, 11:33023 (R;SU;In Russian)

B

Babcock and Wilcox Co., Alliance, OH (USA). Research and Development Div.
Resin and ionics leakage from condensate polishers with and without inert resin. Final report, 11:31806 (R;US)
Balcomb (Sara A.), Golden, CO (USA)
Passive solar in China: traditional and new, 11:31756 (R;US)
Ball State Univ., Muncie, IN (USA). Center for Energy Research/Education/Service
Insulated siding. Quarterly technical progress report, 11:32066 (R;US)
Battelle Columbus Labs., OH (USA)
Feasibility study using hypothesis testing to demonstrate containment of radionuclides within waste packages, 11:31495 (R;US)
Induction melting of metals: state-of-the-art assessment. Final report, 11:32180 (R;US)
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
BCR National Lab., Monroeville, PA (USA)
Gas generator research and development BI-GAS process. Final report for August 19, 1971-October 31, 1979. Vol. 1., 11:31319 (R;US)
Gas generator research and development BI-GAS process. Final report for August 19, 1971-October 31, 1979. Vol. 2., 11:31320 (R;US)
Bechtel National, Inc., Oak Ridge, TN (USA). Advanced Technology Div.
Niagara Falls Storage Site annual site environmental monitoring report. Calendar year 1985, 11:32760 (R;US)
St. Louis Airport Site annual site environmental report. Calendar year 1985, 11:31603 (R;US)
Bergakademie Freiberg (German Democratic Republic). Sektion Physik
Joint annual report 1984, 11:31996 (R;DD;In German and English)
Bern Univ. (Switzerland). Inst. fuer Theoretische Physik
Algorithm for high order strong coupling expansions: The mass gap in 3d pure Z_2 lattice gauge theory, 11:33047 (R;DE)
Testing the WWγ coupling of the standard model at p anti p-colliders, 11:33000 (R;DE)
Beschleunigerlaboratorium der Univ. und Technischen Univ. Muenchen, Garching (Germany, F.R.)
Proposal for a new tomographic device providing information on the chemical properties of a body section, 11:32817 (R;US)
Bettis Atomic Power Lab., West Mifflin, PA (USA)
Production irradiated fuel assay gauge neutron detection: description and testing (LWBR Development Program), 11:31846 (R;US)
Beverly (R.E. III) and Associates, Columbus, OH (USA)
Investigation of the plasma properties of surface discharges. Final report, 1 October 1984-30 September 1985, 11:32968 (R;US)
Bhabha Atomic Research Centre, Bombay (India)
Corrosion inhibitors for carbon steel surfaces in contact with fresh water, 11:31614 (R;IN)
Material compatibility studies for Heavy Water Project, Kota, 11:31613 (R;IN)
Nuclear design report on Tarapur 7 x 7 reload-3 fuel, 11:31792 (R;IN)
PLOT 3D: a multipurpose, interactive program for plotting three dimensional graphs, 11:33463 (R;IN)
Progress report [of] Technical Physics and Prototype Engineering Division, April 1982-March 1984, 11:32641 (R;IN)
Report of the Nuclear Physics Division [for the period] January 1, 1984 to December 31, 1984, 11:33093 (R;IN)
Report on R and D activities of Air Monitoring Section (Division of Radiological Protection) 1979-1984, 11:32740 (R;IN)
Research and development activities of the Seismology Section for the period January 1982-December 1983, 11:32687 (R;IN)
Bhabha Atomic Research Centre, Bombay (India). Heavy Water Div.

International energy statistical review. Monthly report, 11:31405 (R;US)

Central Research Inst. of Electric Power Industry, Abiko, Chiba (Japan). Technical Lab. No. 2
Seismic monitoring of hydraulic fracturing: techniques for determining fluid flow paths and state of stress away from a wellbore, 11:32881 (R;US)

Central Research Inst. of Electric Power Industry, Tokyo (Japan)
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)

Central Vermont Public Service Corp., Rutland (USA)
Nonradiological groundwater quality at low-level radioactive waste disposal sites, 11:31587 (R;US)

Centre d'Etudes et de Recherches de l'Industrie du Beton Manufacture (CERIB), 28 - Epernon (France)
Evaluation method for thermal response factors of precast concrete walls, 11:32041 (R;FR;In French)

Centro Brasileiro de Pesquisas Fisicas, Rio de Janeiro
Enhancement of surface magnetism due to bulk bond dilution, 11:33235 (R;BR)
Exact solution of the nucleons diffusion equation with increase inelastic cross section, 11:32911 (R;BR;In Portuguese)
Gluon and q anti q mixing in the eta-eta' G (identical to iota (1440)) system, 11:32998 (R;BR)
Magnetic properties of tetrataenite-rich meteorites. Pt. 2, 11:32907 (R;BR)
Non-Abelian Aharonov-Bohm effect in the framework of Feynman pseudo-classical path integrals, 11:32999 (R;BR)
On the differential equation of the cosmic ray's nucleonic component with distribution of elasticity, 11:32909 (R;BR)
Scheme to unify gravity and electro-weak interactions, 11:33045 (R;BR)
Solid state transformations in Fe-Ni alloys from meteorites in powder form, 11:32910 (R;BR)
Spin-probe spin-label studies of sodium dodecyl sulfate micelles, 11:32344 (R;BR)
Spin-two equations, 11:33247 (R;BR)
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite, 11:32906 (R;BR)
Weyl (integrable) spacetimes as a model for our cosmos, 11:32908 (R;BR)

Centro de Desenvolvimento da Tecnologia Nuclear, Belo Horizonte (Brazil)
Brazilian-German investigations of thorium utilization in KWU type PWRs. Results of nuclear core design, 11:31831 (R;BR)
Thermohydraulic tests in nuclear fuel model, 11:31830 (R;BR;In Portuguese)

Ceske Vysoke Uceni Technicke, Prague (Czechoslovakia). Fakulta Jaderna a Fysikalne Inzenyrska
Application of Monte Carlo method in modelling physical and physico-chemical processes. Seminar proceedings, 11:33218 (R;CS;In Czech)

Ceskoslovenska Akademie Ved, Prague. Ceskoslovenska Spektroskopicka Spolecnost
Conference on instrumental activation analysis IAA 85. Abstracts of papers, 11:32330 (R;CS;In Czech and Slovak)

Ceskoslovenska Komise pro Atomovou Energii, Prague
Nuclear power complex. Research in management and management in research, 11:31994 (R;CS;In Czech)

Chicago Univ., IL (USA)
anti pp options for the supercollider: proceedings, 11:32589 (R;US)

Chicago Univ., IL (USA). Dept. of Chemistry
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)

Children's Hospital Medical Center, Boston, MA (USA). Dept. of Radiology
Development of a new osmium-191-iridium-191m radionuclide generator. Annual report, 11:32824 (R;US)

Clemson Univ., SC (USA). Dept. of Mechanical Engineering
Blockage of natural convection boundary layer flow in a multizone enclosure, 11:32472 (R;US)

Colorado State Univ., Fort Collins (USA). Dept. of Mechanical Engineering
Passive solar/gas technology characterization and development. Final report, December 1982-March 1985, 11:31754 (R;US)

Colorado Univ., Boulder (USA). Dept. of Physics and Astrophysics
Performance of the SLD Central Drift Chamber prototype, 11:32634 (R;US)

Columbia Gas System Service Corp., Columbus, OH (USA)
Double effect absorption heat pump. Phase 2 and 2A. Final report, October 1982-May 1984, 11:32076 (R;US)

Columbia Univ., New York (USA). Nevis Labs.
Radiological Research Accelerator Facility. Progress report, April 1, 1985-March 31, 1986, 11:32843 (R;US)

Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro
Personnel qualification and quality assurance, for nondestructive tests in nuclear installations, 11:31891 (R;BR;In Portuguese)
Preventive conservation in nuclear power plants, 11:31892 (R;BR;In Portuguese)

Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro. Dept. de Reatores
Study about the structural behavior of WStE-36N steel, 11:32157 (R;BR;In Portuguese)
Study of the influence of the power distributions in the minimum DNBR for Angra 1 reactor, 11:31805 (R;BR;In Portuguese)

Commission of the European Communities, Abingdon (UK). JET Joint Undertaking
MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET, 11:33310 (R;GB)

Commission of the European Communities, Luxembourg
EFOM energy model: development of a tool to answer questions of energy supply, 11:32019 (R;XE)

Feasibility studies for a radioactive waste repository in a deep clay formation, 11:31511 (R;FR)
Mathematical model for the determination of thermal spalling in refractory material on basis of the practical relationship of the appearance of rupture, physical properties and physical conditions, 11:31317 (R;XE)
Methodology for evaluating radiological consequences of the management of very low-level solide waste arising from decommissioning of nuclear power plants, 11:31510 (R;FR)
Predicting lift-off of major self-heating releases under the influence of a building, 11:32741 (R;FR)
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
Study of the penetration of projectiles into marine sediments, 11:31509 (R;FR;In French)

Commission of the European Communities, Luxembourg. Directorate-General for Information, Market and Innovation
Experimental assessment of native and naturalized species of plants as renewable sources of energy in Great Britain. Final report, 11:31698 (R;DE)
Fischer-Tropsch synthesis of hydrocarbons in the gasoil range. Final report, 11:31650 (R;DE)
Part I: The cultivation of large brown coal algae as an energy crop. - Part II: biomass from offshore sea areas of Europe, 11:31697 (R;XE)

Committee on Science and Technology (U.S. Congress. House), Washington, DC
International Geosphere/Biosphere Program, 1984, 11:32755 (R;US)

Commonwealth Scientific and Industrial Research Organization, Mount Waverley (Australia). Div. of Geomechanics
Demonstration of hydraulic fracturing stress measurement techniques, 11:31352 (R;AU)

Connecticut Univ., Storrs (USA). Inst. of Water Resources
Fiscal year 1984 program report: Connecticut Institute of Water Resources, 11:32725 (R;US)

Conoco, Inc., Casper, WY (USA)
Multi-pattern low-tension demonstration flood big muddy field. Technical progress report, January-March 1986, 11:31389 (R;US)

Consumers Power Co., Jackson, MI (USA)
Extended Burnup Demonstration Reactor Fuels program. Final project report, 11:31793 (R;US)
Fuel Performance Improvement Program. Final report, 11:31794 (R;US)

Cornell Univ., Ithaca, NY (USA)
Transition to detonation in a model problem, 11:32397 (R;US)

Council for Mineral Technology, Randburg (South Africa)
Determination of lead, zinc, and magnesium in dolomite and its benefication products by use of x-ray-fluorescence spectrometry, 11:32336 (R;ZA)
Recovery of a concentrate of tin and tungsten from ore mined at Van Roois Vley, 11:32335 (R;ZA)
Selection of a matrix for the recovery of uranium by wet high-intensity magnetic separation, 11:31473 (R;ZA)

D

Defense Intelligence Coll., Washington, DC (USA)
USS Pueblo incident, warning cycle. Master's thesis, 11:33461 (R;US)

Delaware Univ., Newark (USA). Bartol Research Foundation
Particle theory and cosmology. Final report, July 16, 1984-March 31, 1986, 11:33051 (R;US)

Department of Atomic Energy, Bombay (India)
Annual report 1984-1985 [of the Department of Atomic Energy, of the Government of India], 11:31999 (R;IN)

Department of Scientific and Industrial Research, Lower Hutt (New Zealand). Inst. of Nuclear Sciences
Potassium-argon age calculations. A revised evaluation of analytical errors, 11:33469 (R;NZ)

Deutsches Elektronen-Synchrotron (DESY), Hamburg (Germany, F.R.)
Algorithm for high order strong coupling expansions: The mass gap in 3d pure Z_2 lattice gauge theory, 11:33047 (R;DE)
Another higher order Langevin algorithm for QCD, 11:33003 (R;DE)
Calculation of the O(αsub(s)^2) parity-violating structure functions in e^+e^-->q anti qg, 11:33040 (R;DE)
Is a light gluino still compatible with the CERN collider data, 11:33001 (R;DE)
Line of second order phase transitions in the 4-dimensional Z_2 gauge theory with matter fields, 11:33050 (R;DE)
Longitudinal-transverse mode coupling in localized structures with orbit dependent higher order mode losses, 11:32547 (R;DE)
Monte Carlo study of the standard SU(2) Higgs model, 11:33002 (R;DE)
On multi-bunch instabilities for fractionally filled rings, 11:32588 (R;DE)
Testing the WWγ coupling of the standard model at p anti p-colliders, 11:33000 (R;DE)
Updating fermions with the Lanczos method, 11:33048 (R;DE)
Upper limit for two-jet production in direct Y(1S) decays, 11:32981 (R;DE)
Volume dependence of the energy spectrum in massive quantum field theories. Pt. 1. Stable particle states, 11:33049 (R;DE)

Deutsche Shell A.G., Hamburg (Germany, F.R.)
Wheel traces of uncertainty - Shell forecasting of the automobile market development through the year 2000, 11:32014 (R;DE;In German)

Dortmund Univ. (Germany, F.R.). Inst. fuer Physik
Upper limit for two-jet production in direct Y(1S) decays, 11:32981 (R;DE)

Du Pont de Nemours (E.I.) and Co., Aiken, SC (USA)
Actinide microdistributions within monazite, 11:32903 (BA;US)
Baslat glass: an analogue for the ecaluation of the long-term stability of nuclear waste form borosilicate glasses, 11:32308 (BA;US)
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Behavior of carbon-14 in waste packages for spent fuel in a repository in tuff, 11:31553 (BA;US)
Behavior of natural uranium, thorium, and radium isotopes in the Wolfcamp brine aquifers, Palo Duro Basin, Texas, 11:31594 (BA;US)
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Cementitious mixtures for sealing access shafts/boreholes through evaporite and clastic rocks in a radioactive-waste repository, 11:32325 (BA;US)
Characterization of hydrated surface layers on nuclear waste glasses in infrared reflectance spectroscopy, 11:32286 (BA;US)
Characterization of LWR spent fuel approved testing materials for radionuclide release studies, 11:31837 (BA;US)
Chemical implications of heat and radiation damage to rock salt, 11:32896 (BA;US)
Cleanout of waste storage tanks at Oak Ridge National Laboratory, 11:31562 (BA;US)
Conceptual model for deriving the repository source term, 11:31554 (BA;US)
Control of oxidation potential for basalt repository simulation tests, 11:32284 (BA;US)
Corrosion behavior of carbon steels under tuff repository environmental conditions, 11:32225 (BA;US)
Corrosion of candidate iron-base waste package structural barrier materials in moist salt environments, 11:32224 (BA;US)
Crystal chemical constraints on the formation of actinide pyrochlores, 11:32311 (BA;US)
Current technical issues related to near-field materials testing, 11:32316 (BA;US)
Determination of early stages of glass dissolution by pH titration, 11:32287 (BA;US)
Dissolution kinetics of tuff rock and mechanism of chemical bond formation at the interface with cement grout, 11:32898 (BA;US)
Early stages of film formation during the leaching of radioactive waste glasses, 11:32295 (BA;US)
Effect of Grande Ronde basalt groundwater composition and temperature on the corrosion of low-carbon steel in the presence of basalt-bentonite packing, 11:32223 (BA;US)
Effect of groundwater flow on release rate behavior of borosilicate glass, 11:32291 (BA;US)
Effect of radial temperature gradients on glass fracture in simulated high-level waste canisters, 11:32317 (BA;US)

Effect of various lead species on the leaching behavior of borosilicate waste glass, 11:32293 (BA;US)
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:32314 (BA;US)
Effects of flow parameters on the leaching of nuclear waste glass, 11:32285 (BA;US)
Electrokinetics, adsorption and colloid study of simulated nuclear waste glasses leached in aqueous solutions, 11:32296 (BA;US)
Evaluation of materials performance in a large-scale glass melter after two years of vitrifying simulated SRP defense waste, 11:31566 (BA;US)
Extension of the EQ3/6 computer codes to geochemical modeling of brines, 11:32902 (BA;US)
Functions of the materials review board, 11:31557 (BA;US)
Gamma and alpha radiolysis of salt brines, 11:32310 (BA;US)
Generalized model for the analysis of groundwater radiolysis, 11:32388 (BA;US)
Geochemical performance evaluation and characterization of a potential cementitious repository sealing material for application in the Topopah Spring tuff NNWSI investigations, 11:32324 (BA;US)
Geoengineering characterization of welded tuffs from laboratory and field investigations, 11:32894 (BA;US)
High-level radioactive insoluble waste preparation for vitrification, 11:31563 (BA;US)
Hot cells preparation of testing materials, 11:31559 (BA;US)
Hydrothermal interaction of Topopah Spring tuff with J-13 water as a function of temperature, 11:32893 (BA;US)
Hydrothermal studies of simulated defense waste glass plus basalt, 11:32303 (BA;US)
Hydrothermal waste package interactions with methane-containing basalt groundwater, 11:32304 (BA;US)
Improved uranium recovery from the process strams in an electroplating facility, 11:31565 (BA;US)
International Waste Glass Study. Composition and leachbility correlations, 11:32292 (BA;US)
Investigation of metamict and annealed natural pyrochlores by x-ray absorption spectroscopy, 11:32313 (BA;US)
investigation of the hydrothermal interaction of ^{99}Tc-doped glass with basalt repository nuclear waste package components, 11:32891 (BA;US)
Iodine waste forms: calcium aluminate hydrate analogues, 11:32322 (BA;US)
Ion implantation damage processes in nuclear waste glass and other silicate glasses, 11:32309 (BA;US)
Irradiation-induced reduction of microcracking in zirconolite, 11:32242 (BA;US)
Kinetic model of nuclear waste glass dissolution in flowing water environments, 11:32297 (BA;US)
Leachability of cement encapsulated West Valley radwaste streams, 11:32320 (BA;US)
Leachability of decontamination reagents from cement waste forms, 11:32323 (BA;US)
Leaching of devitrified glass containing simulated SRP nuclear waste, 11:32290 (BA;US)
Leaching of saltstone, 11:32319 (BA;US)
Leaching of warm-pressed CsZP-cement composite waste forms, 11:32321 (BA;US)
Leaching Savahhanh River Plant nuclear waste glass in a saturated tuff environment, 11:32298 (BA;US)
Mass transfer in a geologic environment, 11:32301 (BA;US)
Materials interactions test method to measure radionuclide release from waste forms under repository-relevant conditions, 11:32315 (BA;US)
Modelling of waste form performance and system release, 11:32283 (BA;US)
Natural pyrochlores: analogues for actinide host phases in radioactive waste forms, 11:32312 (BA;US)
NNWSI waste form performance test development, 11:31591 (BA;US)
Nonlinear concentration effects on radionuclide diffusion and mobility in compacted bentonite, 11:32307 (BA;US)
^{237}Np and ^{239}Pu solution behavior during hydrothermal testing of simulated nuclear waste glass with basalt and steel, 11:32302 (BA;US)
Nuclear reaction analysis technique to determine the penetration of hydrogenic species into glasses exposed to leaching solutions, 11:32288 (BA;US)
One-year leaching of three SRL glasses in granite, 11:32294 (BA;US)
Parametric testing of a DWPF borosilicate glass, 11:32300 (BA;US)
Permeability changes in crystalline rocks due to temperature: effects of mineral assemblage, 11:32892 (BA;US)
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Probabilistic analysis of human intrusion in a high level nuclear waste repository in salt using draft EPA assumptions, 11:31608 (BA;US)
Purpose of the Materials Characterization Center, 11:31556 (BA;US)
Rapid increases in permeability and porosity of bentonite-sand mixtures due to alteration by water vapor, 11:32305 (BA;US)
Reference and testing materials available from the Materials Characterization Center, 11:31558 (BA;US)
Role of boron in monitoring the leaching of borosilicate glass waste forms, 11:32289 (BA;US)
Role of statistics in characterizing nuclear waste package behavior, 11:31561 (BA;US)
Rubidium-strontium geochronologic systematics in igneous contact zones: analog for ^{90}Sr and ^{137}Cs behavior in the near field, 11:32872 (BA;US)
Salton Sea geothermal field as a natural analog for the near-field in a salt high-level nuclear waste repository, 11:31555 (BA;US)
Self-radiation damage in actinide host phases of nuclear waste forms, 11:32243 (BA;US)
Solubility data for U(VI) hydroxide and Np(IV) hydrous oxide: application of MCC-3 methodology, 11:32357 (BA;US)
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Sorption-capacity limited retardation of radionuclides transport in water-saturated packing materials, 11:31592 (BA;US)
Source term development for tritium at the Sheffield disposal site, 11:31567 (BA;US)
Standardized waste form test methods, 11:31560 (BA;US)
Swelling pressures of compacted bentonite/sand mixtures, 11:32306 (BA;US)
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Technetium removal processes for soluble defense high-level waste, 11:31564 (BA;US)
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Thermodynamically coupled mass transport processes in a saturated clay, 11:31595 (BA;US)
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
Transport and capture of colloidal particles in single fractures, 11:31593 (BA;US)
Transport code for radiocolloid migration: with an assessment of an actual low-level waste site, 11:31596 (BA;US)
Tuff-cement or concrete interactions in the repository environment, 11:32897 (BA;US)
WIPP waste package testing on simulated DHLW: emplacement, 11:31552 (BA;US)

Contribution to the modelization of liquid-liquid extraction systems. Application to metallic nitrate extraction by TBP in nitric medium, 11:31479 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France)
Carbon-11 labelled phosgene new synthesis - medical interest, 11:32393 (R;FR;In French)
Charged fusion products in a Tokamak, 11:33295 (R;FR;In French)
Contribution to the study of the interaction of intense relativistic electron beam with anodic plasma, 11:33301 (R;FR;In French)
Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities, 11:32937 (R;FR;In French)
Reiterated inclusions of dipoles in a dense plasma, 11:33298 (R;FR;In French)
Resonant absorption in a exponential electronic density gradient, 11:33300 (R;FR;In French)
Study of a high and low pressure plasma produced in a He-N_2 mixture: application to spontaneous emissions by radiative collisions, 11:32935 (R;FR;In French)
Study on the hydrogen negative ion in low pressure discharges, 11:33302 (R;FR;In French)
Theoretical study of atomic structure of $Z<40$ elements, ionic excited state populations in a hot plasma and population inversions, 11:33299 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France). Inst. de Physique Nucleaire
Accelerator for nuclear transmutation, 11:31514 (R;FR;In French)
Semiclassical approach to Dirac operators in the ground state wave function representation, 11:33257 (R;FR)
Some properties of the functions satisfying Bell's inequalities in relation to quantum mechanics, 11:33256 (R;FR;In French)
Paris-11 Univ., 91 - Orsay (France). Lab. de Physique des Plasmas
Study of a microwave discharge in argon/helium mixtures, 11:32944 (R;FR;In French)
Pennsylvania State Univ., University Park (USA)
Excitation and ionization of highly charged ions by electron impact. Progress report, September 1, 1985-April 30, 1986, 11:33292 (R;US)
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
Surface and electrochemical studies in coal cleaning. Technical progress report, January 1, 1985-March 31, 1986, 11:31344 (R;US)
Pennsylvania State Univ., University Park (USA). Coll. of Earth and Mineral Sciences
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Pennsylvania State Univ., University Park (USA). Dept. of Chemistry
Monte Carlo simulation of free jet flow from a slit, 11:32474 (R;US)
Pernambuco Univ., Recife (Brazil). Dept. de Energia Nuclear
Analysis of some anticipated transients without scram for a pressurized water cooled reactor (PWR) using coupling of the containment code CORAN to the system model code ALMOD, 11:31810 (R;BR;In Portuguese)
Phillips Petroleum Co., Bartlesville, OK (USA)
Compact reversed-field pinch reactors (CRFPR), 11:33405 (R;US)
Physical Sciences, Inc., Andover, MA (USA)
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)
Physikalisch-Technische Bundesanstalt, Braunschweig (Germany, F.R.). Abt. Sicherstellung und Endlagerung Radioaktiver Abfaelle
Dose rates of waste packagings. A manual for activity determination of single radionuclide mixtures in standardized waste packagings resulting from dose rate limits, 11:31518 (R;DE;In German)
PIRA, Leatherhead (UK)
Installation of a direct fired Lanham bread baking system. A demonstration at Family Loaf Bakery Ltd. [Bristol], 11:32099 (R;GB)
Rebuilding a paper machine press part to give increased water removal with control of moisture profile. A demonstration project at the Aylesford Mill of Reed Paper and Board (UK) Ltd. [Maidstone], 11:32105 (R;GB)
Pittsburgh Univ., PA (USA)
Coal liquefaction. Investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1986, 11:31309 (R;US)
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)
Pittsburgh Univ., PA (USA). Dept. of Chemical and Petroleum Engineering
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, January-March 1986, 11:31312 (R;US)

Pontificia Univ. Catolica do Rio de Janeiro (Brazil)
Proceedings of the 6. Brazilian Congress on Engineering and Materials Science, 11:32230 (R;BR;In Portuguese and English)
Prairie View A and M Univ., TX (USA)
Thermodynamic analysis of a geopressured geothermal hybrid wellhead power system. Final report, 11:31765 (R;US)
Puerto Rico Univ., Rio Piedras
Relativistic gaussian basis set calculations on one-electron ions with a nucleus of finite extent, 11:32928 (R;US)
Purdue Univ., Lafayette, IN (USA). Dept. of Entomology
Primary gene products as plant defenses. Final report, November 1, 1983-October 31, 1984, 11:32794 (R;US)
Purdue Univ., Lafayette, IN (USA). School of Mechanical Engineering
Effects of Zircaloy oxidation and steam dissociation on PWR core heat-up under conditions simulating uncovered fuel rods, 11:31807 (R;US)

R

Radian Corp., Research Triangle Park, NC (USA)
Analysis of costs and cost effectiveness of SO_2 control for mixed-fuel-fired steam generating units. Final report, 11:31782 (R;US)
Rensselaer Polytechnic Inst., Troy, NY (USA)
Photon scattering and interaction analysis of interfacial corrosion and catalysis. Technical progress report, 1 February 1982-30 January 1986, 11:32932 (R;US)
Research Triangle Inst., Durham, NC (USA)
Mathematical modeling of emissions from cooling towers using coal gasification wastewater. Final report, November 1982-April 1985, 11:31322 (R;US)
Resource Dynamics Corp., McLean, VA (USA)
Electrotechnology reference guide. Final report, 11:32024 (R;US)
Rio de Janeiro Univ. (Brazil). Coordenacao dos Programas de Posgraduacao de Engenharia
Application of the explicit method for analysing intersystem dependencies in the evaluation of event trees, 11:33488 (R;BR)
Sensitivity calculation of the coolant temperature regarding the thermohydraulic parameters, 11:31835 (R;BR;In Portuguese)
Rio de Janeiro Univ. (Brazil). Inst. de Fisica
Bulk viscosity driven inflationary model, 11:33025 (R;BR)
Monte Carlo model for fission-in-flight experiments. I. Cylindrical detectors, 11:32635 (R;BR)
Non-Abelian Aharonov-Bohm effect in the framework of Feynman pseudo-classical path integrals, 11:32999 (R;BR)
Rio Grande do Norte Univ., Natal (Brazil). Dept. de Fisica
Enhancement of surface magnetism due to bulk bond dilution, 11:33235 (R;BR)
Risk Management Associates, Albuquerque, NM (USA)
Containment response and radiological release for a TMLB' accident sequence in a large dry containment, 11:31958 (R;US)
Rochester Univ., NY (USA). Dept. of Chemical Engineering
Studies on the reaction of calcined limestone with sulfur dioxide. Technical progress report, January-March 1986, 11:31314 (R;US)
Rockefeller Univ., New York (USA)
UA6 electromagnetic calorimeter: performance and first results, 11:32557 (R;US)
Rockwell International Corp., Canoga Park, CA (USA). Rocketdyne Div.
Radiation augmented propulsion feasibility. Final report, 17 September 1984-28 September 1985, 11:31665 (R;US)
Rockwell International Corp., Golden, CO (USA). Rocky Flats Plant
Flexible fabrication system for crankcase, 11:32437 (TJ;US)
FMS precision machining, 11:32425 (R;US)
Rockwell International Corp., Richland, WA (USA). Rockwell Hanford Operations
Communicating with the IBM-PC on the Xerox Ethernet local area network, 11:33478 (R;US)
Limitations in determining redox chemistry in basalt groundwaters at the Hanford site, 11:32899 (R;US)
Probabilistic modeling of radionuclide release at the waste package subsystem boundary of a repository in basalt, 11:31589 (R;US)
Radioactivity in gaseous waste discharged from the separations facilities during 1985, 11:32745 (R;US)
Rolls Royce Motors, Inc., Lyndhurst, NJ (USA)
Application for certification, 1986 model year light-duty vehicles - Rolls Royce, 11:32142 (R;US)
Rutherford Appleton Lab., Chilton (UK)
Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study, 11:33074 (R;GB)
Studies of the dynamic properties of materials using neutron scattering, 11:33223 (R;GB)
Topological susceptibility in SU(2) lattice gauge theory: an exploratory study, 11:33075 (R;GB)

Joint annual report 1984, 11:31996 (R;DD;In German and English)

PERSONAL AUTHOR INDEX

Authors' surnames are indexed in the form appearing in the abstracted publication; given names are reduced to initials. Each author entry gives the publication title and the citation number. The document type, e.g., R for Report; country of publication, e.g., US; and language of the document, e.g., In German; are given in parentheses at the end of the entry. If no language statement appears, the language is English. Tables of document types and country of publication codes appear after the indexes. For publications with multiple authors, an entry is provided for each author. Entries for the second and succeeding authors give references to the first author.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. Changes in spelling introduced as a result of accent omission follow standard conventions.

SUBJECT INDEX

The subject index is based on the use of subject descriptors selected from a controlled thesaurus of terms (DOE/TIC-7000). Subject descriptors and qualifiers (subheadings) are selected and presented in the following format:

SUBJECT DESCRIPTOR
Qualifier
Title, (supplementary information), citation number, (R;US)

The notations in the final parentheses indicate the type of document, e.g., R for Report; the country of publication, e.g., US; and the language if other than English, e.g., In German. Tables of document types and country of publication codes appear after the indexes.

The title may be supplemented with additional words, or a phrase, if it appears additional information would be helpful. In cases for which the title contains little or no information related to the subject entry, it may be replaced entirely by the supplementary information. A qualifier is not always required, and in such cases the title will follow the unqualified subject descriptor.

The descriptors selected for use as subject terms are generally the names of specific materials, things, or processes. To the extent possible, a qualifier is selected to describe the properties of, or processes applied to, the subject term.

Index entries are selected to indicate the important ideas and concepts presented in a document, rather than words that may appear in the text. Within the available thesaurus terms, the most probable or logical place to look for typical information is selected. "See references" are included to guide users from synonymous terms or phrases to the descriptor selected as a subject heading for the concept (e.g., Pipeline Quality Gas, see HIGH BTU GAS). "See also references" are used to indicate where to find references to subject concepts that are narrower, broader, or related to a particular subject heading. To complete an exhaustive search of a given subject, all such headings should be reviewed. Copies of DOE/TIC-7000, the Subject Thesaurus, are available from the National Technical Information Service (NTIS), U.S. Department of Commerce, Springfield, VA 22161.

Operational problems with radiation survey meters: the university and accelerator perspectives, 11:32613 (RA;US)
Research Programs
Accelerator technology program. Status report, October 1984-March 1985, 11:32532 (R;US)
ACCELEROMETERS
Development of a sensitive superconducting accelerometer and gravity gradiometer. Final report, 1 October 1979-30 September 1984, 11:32410 (R;US)
ACCIDENTAL INTAKE
See ACCIDENTS
ACCIDENTAL IRRADIATION
See RADIATION ACCIDENTS
ACCIDENTS
See also RADIATION ACCIDENTS
REACTOR ACCIDENTS
International Cooperation
17 January 1984 - Act approving the Agreement between the Kingdom of Belgium and the Federal Republic of Germany on mutual assistance in the event of catastrophes or serious accidents, signed in Brussels on 6 November 1980, 11:32000 (R;BE;In French, Dutch and German)
ACCOUNTING
S Codes
Symphony Time Accounting Resource (STAR), 11:33462 (R;US)
ACCUMULATION (RADIOECOLOGICAL)
See RADIOECOLOGICAL CONCENTRATION
ACES
See QUARKS
ACETATES
Biosynthesis
Propionate conversion to butyrate in an anaerobic digester, 11:31632 (RA;US)
ACETIC ACID
Metabolism
One carbon metabolism in anaerobic bacteria. Organic acid and methane production. Progress report, June 1985-May 1986, 11:32797 (R;US)

ACETYLAMINOFLUORENES
Structural Models
Base displacement in AAF-modified Z-DNA, 11:32801 (J;US)
ACETYLCHOLINE
Receptors
[Development of gamma-emitting, receptor-binding radiotracers for imaging the brain and pancreas]. Progress report, March 1, 1985-February 1, 1986, 11:32823 (R;US)
ACID CARBONATES
Corrosive Effects
Stress corrosion cracking tests on electron beam welded carbon steel specimens in carbonate-bicarbonate solution, 11:32155 (R;GB)
ACID RAIN
Chemical composition of precipitation and watershed samples collected at Deep Creek Lake, Garrett County, Maryland. Final report, 11:32783 (R;US)
Concurrent Session I: Terrestrial Effects, 11:32732 (RA;US)
Concurrent Session II: Aquatic Effects, 11:32786 (RA;US)
Chemical Analysis
Developing an industrial boiler inventory, 11:32113 (J;US)
Corrosive Effects
Methods of chemical analysis for selected species in marble and limestone surfaces exposed to the acidic outdoor environment, 11:32327 (R;US)
Environmental Effects
Factors affecting response of surface waters to acidic deposition, 11:32781 (R;US)
Environmental Impacts
Factors affecting the long-term response of surface waters to acidic deposition: state-of-the-science, 11:32756 (R;US)
Water resource baseline data and assessment of impacts from acidic precipitation, Acadia National Park, Maine. Technical report (Final), 11:32784 (R;US)
Meetings
Second annual acid rain conference for the Southern Appalachians: proceedings. Abstracts, 11:32731 (R;US)
Research Programs
International Geosphere/Biosphere Program, 1984, 11:32755 (R;US)
Opening Session, 11:32750 (RA;US)
ACIDIFICATION
Response Modifying Factors
Factors affecting response of surface waters to acidic deposition, 11:32781 (R;US)
Technology Assessment
Factors affecting the long-term response of surface waters to acidic deposition: state-of-the-science, 11:32756 (R;US)
ACT DEVICES
Plasma Density
Role of ion Bernstein waves in ICRF experiments, 11:33365 (J;US)
Plasma Heating
Role of ion Bernstein waves in ICRF experiments, 11:33365 (J;US)
ACTINIDE COMPOUNDS
See also URANIUM COMPOUNDS
Chemical Composition
Natural pyrochlores: analogues for actinide host phases in radioactive waste forms, 11:32312 (BA;US)
Chemical Radiation Effects
Natural pyrochlores: analogues for actinide host phases in radioactive waste forms, 11:32312 (BA;US)
Synthesis
Crystal chemical constraints on the formation of actinide pyrochlores, 11:32311 (BA;US)
ACTINIDES

NEPTUNIUM
PLUTONIUM
THORIUM
URANIUM
Solvent Extraction
Method for extracting lanthanides and actinides from acid solutions, 11:31546 (P;US)
ACTIVATION ANALYSIS
Calibration Standards
Intercomparison of the Asaro-Perlman and Brookhaven archaeological ceramic analytical standards, 11:32341 (J;CH)
Meetings
Conference on instrumental activation analysis IAA 85. Abstracts of papers, 11:32330 (R;CS;In Czech and Slovak)
ADDITIVES
Recommendations
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
ADENOSINE TRIPHOSPHATE
See ATP
ADOLESCENTS
Education
Summer Research Apprentice Program report (Summer Research Apprentice Program), 11:33457 (R;US)
AEROSOLS
See also RADIOACTIVE AEROSOLS
Data Analysis
Portable calculator operating system for aerosol science use, 11:32739 (J;US)
Production
High velocity electromagnetic particle launcher for aerosol production studies, 11:32428 (R;US)
Variations
Data bases for isolating the effects of the increasing carbon dioxide concentration, 11:32696 (R;US)
AESTHETICS
Measuring Methods
EIA scoping for aesthetics: hindsight from the Greene County Nuclear Power Plant EIS, 11:31988 (BA;US)
AGE ESTIMATION
See also ISOTOPE DATING
A Codes
Potassium-argon age calculations. A revised evaluation of analytical errors, 11:33469 (R;NZ)
AGRICULTURE
Solar Drying
Application of solar energy to agricultural production processes. Final report, 11:31750 (R;US)
Solar Energy
Application of solar energy to agricultural production processes. Final report, 11:31750 (R;US)
AIR
Thermodynamic Properties
Computer program to determine thermodynamic properties of moist air, 11:32055 (RA;US)
AIR INFILTRATION
Monitoring
Experimental protocol and preliminary results of air infiltration rate measurements in Tennessee Valley homes, 11:32709 (R;US)
AIR POLLUTION
See also INDOOR AIR POLLUTION
Chemical emergency preparedness program: organizing the community, gathering site-specific information, contingency plan development, contingency plan appraisal, the criteria, appendices. Interim guidance, 11:32715 (R;US)
Chemical emergency preparedness program: chemical profiles. Interim guidance, 11:32716 (R;US)
Development of a fuel-spill/vapor-migration modeling system. Final report, October 1984-March 1985, 11:31403 (R;US)
Monitoring
Science advisory board review of the Forest Effects Research Program, 11:32767 (R;US)
Trajectories
Air pollutant trajectories in precipitating storms, 11:32703 (BA;US)
AIR POLLUTION ABATEMENT
Use this term for items that involve the prevention of formation of pollutants at the source.
Barge-loading facilities: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32723 (R;US)

Bulk plants: technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee. Summary report, 11:32724 (R;US)
Computer economics of physical coal cleaning and flue gas desulfurization. Final report. Report for October 1979-June 1983, 11:31783 (R;US)
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal. Report for September 1984-December 1985, 11:32726 (R;US)
Offset-lithography summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32720 (R;US)
Solvent extraction: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32722 (R;US)
Certification
Application for certification, 1986 model year light-duty vehicles - Alfa Romeo, 11:32133 (R;US)
Application for certification 1986 model year light-duty vehicles - BMW, 11:32134 (R;US)
Application for certification 1986 model year light-duty vehicles - General Motors, 11:32135 (R;US)
Application for certification, 1986 model year light-duty vehicles - Honda, 11:32136 (R;US)
Application for certification, 1986 model year light-duty vehicles - Isuzu, 11:32137 (R;US)
Application for certification, 1986 model year light-duty vehicles - Jaguar, 11:32138 (R;US)
Application for certification, 1986 model year light-duty vehicles - Mazda, 11:32139 (R;US)
Application for certification, 1986 model year light-duty vehicles - Mitsubishi, 11:32140 (R;US)
Application for certification, 1986 model year light-duty vehicles - Nissan, 11:32141 (R;US)
Application for certification, 1986 model year light-duty vehicles - Rolls Royce, 11:32142 (R;US)
Application for certification, 1986 model year light-duty vehicles - Volkswagen/Audi, 11:32143 (R;US)
Application for certification, 1986 model year heavy-duty vehicles - General Motors Corporation, 11:32144 (R;US)
Manuals
Evaluation of control technologies for hazardous air pollutants. Volume 1. Technical report. Final report, August 1984-October 1985, 11:32728 (R;US)
Evaluation of control technologies for hazardous air pollutants. Volume 2. Appendices. Final report, August 1984-October 1985, 11:32729 (R;US)
Quality Control
Inspection and maintenance of new-technology vehicles in Washington, DC. Technical report, 11:32145 (R;US)
Technology Assessment
Evaluation of control technologies for hazardous air pollutants. Volume 1. Technical report. Final report, August 1984-October 1985, 11:32728 (R;US)
Evaluation of control technologies for hazardous air pollutants. Volume 2. Appendices. Final report, August 1984-October 1985, 11:32729 (R;US)

AIR POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Energy Demand
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)
Performance
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)

AIR POLLUTION MONITORING
Air Samplers
Design and development of an air sampler for the environmental radiation ambient monitoring system (ERAMS), 11:32744 (R;US)

AIR QUALITY
Mathematical Models
Evaluation of three regional air quality models, 11:32736 (J;GB)

AIR SAMPLERS
Performance
Design and development of an air sampler for the environmental radiation ambient monitoring system (ERAMS), 11:32744 (R;US)

AIR SOURCE HEAT PUMPS
Computerized Simulation
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture. Final report, 11:32078 (R;US)
Design
Double effect absorption heat pump. Phase 2 and 2A. Final report, October 1982-May 1984, 11:32076 (R;US)
Refrigerants
Modeling of a heat pump charged with a non-azeotropic refrigerant mixture. Final report, 11:32078 (R;US)

AIRBORNE PARTICLES
See PARTICULATES

AIRBORNE PARTICULATES

AIRPORTS
Environmental Effects
St. Louis Airport Site annual site environmental report. Calendar year 1985, 11:31603 (R;US)

ALABAMA
Natural Gas Deposits
Coalbed methane geostatistical analysis project, 11:31445 (RA;US)
Natural Gas Wells
Coalbed methane geostatistical analysis project, 11:31445 (RA;US)
Measurement of dynamic reservoir conditions, 11:31443 (RA;US)
Water Reservoirs
Factors affecting development of a summer, cyanophyta-dominated phytoplankton community in a mainstem Tennessee River reservoir, 11:32789 (R;US)

ALAP
See RADIATION PROTECTION

ALARM DOSEMETERS
See RADIATION MONITORS

ALCATOR DEVICE
Plasma Heating
Energy confinement studies of lower hybrid current driven discharges in the Alcator C tokamak, 11:33367 (J;US)
Theoretical studies of lower hybrid current drive in the Alcator C tokamak, 11:33370 (J;US)

ALCOHOLS
See also ETHANOL
METHANOL
Chemical Preparation
Phase separation of organics/water mixtures using salts, 11:31661 (J;US)
Separation Processes
Phase separation of organics/water mixtures using salts, 11:31661 (J;US)

ALFVEN WAVES
Antennas
Antenna analysis and boundary conditions for Alfven wave studies in tokamaks, 11:33344 (J;AT)

ALGAE
See also LICHENS
Cultivation
Part I: The cultivation of large brown coal algae as an energy crop. - Part II: biomass from offshore sea areas of Europe, 11:31697 (R;XE)

ALKANES

DODECANE
ETHANE
HEPTANE
HEXADECANE
HEXANE

METHANE
OCTANE
PENTANE
PROPANE
Bulk Density
Thermodynamic properties of hydrocarbons (Nonane; undecane; tridecane; tetradecane; pentadecane), 11:32368 (R;US)
Chemical Preparation
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Chemical Radiation Effects
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Chemical Reactions
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Crystal Structure
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Enthalpy
Thermodynamic properties of hydrocarbons (Nonane; undecane; tridecane; tetradecane; pentadecane), 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons (Nonane; undecane; tridecane; tetradecane; pentadecane), 11:32368 (R;US)
Excitation
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Gas Chromatography
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
ALKENES
See also BUTENES
CYCLOALKENES
PROPYLENE
Chemical Radiation Effects
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Excitation
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Gas Chromatography
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
ALKYL RADICALS
See also PROPYL RADICALS
Excited States
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
Fluorescence
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
Lifetime

ALPHA DETECTION
Liquid Ionization Chambers
Photosensitive dopants for liquid argon, 11:32636 (J;NL)
Photographic Film Detectors
Radon detection in soils by solid state nuclear track detectors, 11:32604 (R;BR)
ALPHA PARTICLE MODEL
See CLUSTER MODEL
ALPHA REACTIONS
Breakup Reactions
Break up of light ions in the nuclear and Coulomb field of nuclei, 11:33193 (R;DE)
Cascade Theory
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Compound-Nucleus Reactions
Deformation effects in the statistical decay of the giant dipole resonance, 11:33140 (RA;US)
Statistical GDR decays over a wide range of energy from the $^{63}Cu^{*}$ compound nucleus, 11:33134 (RA;US)
Fission
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Heavy Ion Fusion Reactions
Penetrability of the centrifugal barrier and the spin distribution of the compound nucleus, 11:33109 (RA;US)
Inelastic Scattering
Alpha-particle cross section relevant to gamma-ray astronomy, 11:33105 (RA;US)

Nuclear Reaction Yield
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)

ALPHA-BEARING WASTES
Radioactive Waste Disposal
The WIPP research and development program: providing the technical basis for defense waste disposal, 11:31577 (BA;US)

ALTERNATE FUELS
See FUEL SUBSTITUTION

ALUMINIA
See ALUMINIUM OXIDES

ALUMINIUM
Adsorption
Electrokinetics, adsorption and colloid study of simulated nuclear waste glasses leached in aqueous solutions, 11:32296 (BA;US)
Charged-Particle Transport
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
Dissolution
High-level radioactive insoluble waste preparation for vitrification, 11:31563 (BA;US)
Electron-Atom Collisions
Monokinetic electron backscattering from amorphous or polycrystalline specimens, 11:32934 (R;FR;In French)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Extrusion
Strain analysis for extrusion of powder metals, 11:32174 (R;US)
Ion-Atom Collisions
Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities, 11:32937 (R;FR;In French)
Photon Collisions
Measurements of laser generated impulse, 11:32943 (R;US)
Physical Radiation Effects
Calculated radiation damage effects of high energy proton beams, 11:32175 (R;CH)
Pulses
Measurements of laser generated impulse, 11:32943 (R;US)

ALUMINIUM 27
Diffusion
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)

ALUMINIUM 27 TARGET
Nitrogen 14 Reactions
Survivance of complete fusion for the $^{14}N+^{27}Al$ system, 11:33122 (R;FR)
One-Nucleon Transfer Reactions
New scheme for the calibration of sub-Coulomb heavy ion proton transfer reactions, 11:33110 (RA;US)

ALUMINIUM ALLOYS
See also ALUMINIUM BASE ALLOYS
INCONEL 617
Corrosion Resistance
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)
Creep
Creep behavior of a polycrystalline nickel aluminide: Ni-23.5 at.% Al-0.5 at.% Hf-0.2 at.% B, 11:32215 (J;US)
Electrochemical Cells
Overview of transport mechanisms in β-lithium/aluminum, 11:32170 (R;US)
Electron Beam Melting
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Fatigue
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)
Hydridation
Use of metal hydrides for handling tritium, 11:33425 (J;US)
Phase Studies
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Photon Collisions
Measurements of laser generated impulse, 11:32943 (R;US)
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)
Stability and formation of $NiAl_3$ under ion irradiation, 11:32213 (J;US)
Pulses
Measurements of laser generated impulse, 11:32943 (R;US)
Yield Strength
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)

ALUMINIUM BASE ALLOYS
Precipitation Hardening
Theory of strengthening by ordered precipitates, 11:32198 (R;US)

ALUMINIUM OXIDES
See also SPINELS
Catalytic Effects
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Chemical Preparation
Preparation of alumina - β'. 2. Effects of the impurities on the ionic conductivity, 11:32231 (RA;BR;In Portuguese)
Preparation of alumina-β'. 1. Effect of the raw material purity on the phase transformation, 11:32232 (RA;BR;In Portuguese)
Dielectric Properties
Characterization of radio frequency HMC manufacturing processes. Final report, 11:32475 (R;US)
Impurities
Preparation of alumina - β'. 2. Effects of the impurities on the ionic conductivity, 11:32231 (RA;BR;In Portuguese)
Preparation of alumina-β'. 1. Effect of the raw material purity on the phase transformation, 11:32232 (RA;BR;In Portuguese)
Inspection
Characterization of radio frequency HMC manufacturing processes. Final report, 11:32475 (R;US)
Ionic Conductivity
Preparation of alumina - β'. 2. Effects of the impurities on the ionic conductivity, 11:32231 (RA;BR;In Portuguese)
Nuclear Magnetic Resonance
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
Phase Diagrams
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Iodine waste forms: calcium aluminate hydrate analogues, 11:32322 (BA;US)
Phase Transformations
Preparation of alumina-β'. 1. Effect of the raw material purity on the phase transformation, 11:32232 (RA;BR;In Portuguese)
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)
Raman Spectra
Raman spectroscopic investigation of the effect of H_2O on the molybdenum surface species in MoO_3/Al_2O_3 catalysts, 11:32359 (J;US)
Vibrational States
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)

ANHYDRITE
Solubility
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
ANILINE
Hydrogenation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
ANIMAL CELLS
Includes human cells.
See also CHO CELLS
EMBRYONIC CELLS
Cell Proliferation
Biological availability of nickel arsenides: cellular response to soluble Ni_5As_2, 11:32859 (J;US)
ANIONS
See also HYDROGEN IONS 1 MINUS
Beam Neutralization
Photodetachment technology, 11:32587 (J;US)
Ion Sources
Negative ion beam requirements for compact tori, 11:33454 (J;US)
ANKERITE
Catalytic Effects
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Porosity
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
ANL
Environment
1985 annual site environmental report for Argonne National Laboratory, 11:32763 (R;US)
Environmental Effects
1985 annual site environmental report for Argonne National Laboratory, 11:32763 (R;US)
ANORTHOSITES
Permeability
Permeability changes in crystalline rocks due to temperature: effects of mineral assemblage, 11:32892 (BA;US)
ANTENNAS
Design
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
ICRF heating of passing ions in a thermal barrier tandem mirror, 11:33363 (J;US)
Electric Currents
Effects of Alfven Wave Heating on both confinement and impurities, 11:33357 (J;US)
Electrical Properties
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Fabrication
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Feedback
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)

Frequency Analysis
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Performance Testing
3-D analysis on arbitrarily-shaped ICRF antennas and Faraday shields, 11:33394 (R;US)
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Shields
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Tuning
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)

ANTHRACENE
Photoionization
Solute-induced photo-ionization of nonpolar liquids, 11:32379 (J;US)

ANTHRACITE
Calorific Value
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Consumption Rates
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Production
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Small Angle Scattering
Small angle X-ray investigations of char structure during gasification, 11:31329 (B;US)

ANTHRAQUINONES
Electron Transfer
Distance dependent rates of photoinduced charge separation and dark charge recombination in fixed distance porphyrin-quinone molecules, 11:32367 (R;US)

ANTIBIOTICS
Inhibition
Antibiotic G418 for selection and maintenance of pro- and eukaryotic transformants and its possible application for methanogen transformation, 11:32810 (RA;US)

ANTIMONY
Activation Analysis
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Crystal Structure
Rhombohedral phase stability of the group-VA elements, 11:32265 (J;US)
Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
X-Ray Spectra
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)

ANTIMONY COMPOUNDS
Fermi Level
Fermi surface of field-induced ferromagnetic CeSb, 11:32205 (J;US)

ANTIPROTON REACTIONS
Elastic Scattering
Antiproton-nucleus interaction: review of the experimental situation, 11:33174 (R;FR)
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Inclusive Interactions
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)
Inelastic Scattering
Antiproton-nucleus interaction: review of the experimental situation, 11:33174 (R;FR)
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Knock-Out Reactions
Antiproton-nucleus interaction: review of the experimental situation, 11:33174 (R;FR)
Reviews
Antiproton-nucleus interaction: review of the experimental situation, 11:33174 (R;FR)

ANTIPROTONIC ATOMS
See HADRONIC ATOMS

ANTIPROTONS
Particle Production
Search for "subthreshold" production of antiprotons and creation of fractional charges and new particles in relativistic nuclear collisions, 11:33123 (J;US)

ANTRIM SHALES
See BLACK SHALES

APARTMENT BUILDINGS
Energy Consumption
BETT YARDSTICK: an apartment energy use database, 11:32084 (J;US)
Measured energy savings in retrofitted multifamily buildings, 11:32071 (R;US)
Hot Water
Project SAGE. Solar assisted gas energy, 11:31751 (R;US)
Retrofitting
Measured energy savings in retrofitted multifamily buildings, 11:32071 (R;US)

APPALACHIA
The mountainous region, including valleys and plateaus extending through the eastern USA from New England to Georgia and Alabama.
Natural Gas Deposits
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Ordovician black shales: Devonian shale-oil study, 11:31419 (RA;US)
Overview: Eastern gas shales, 11:31437 (RA;US)
Natural Gas Wells
Eastern gas shales reservoir tester instrumentation development, 11:31432 (RA;US)
Petroleum Deposits
Ordovician black shales: Devonian shale-oil study, 11:31419 (RA;US)

APPARATUS
See EQUIPMENT

APPLICATORS (RADIOTHERAPY)
See RADIATION SOURCES

AQUATIC ECOSYSTEMS
See also WETLANDS
Acidification
Concurrent Session II: Aquatic Effects, 11:32786 (RA;US)
Factors affecting the long-term response of surface waters to acidic deposition: state-of-the-science, 11:32756 (R;US)
Research Programs
SNL Document number 16-5277, 2/3/82 and Amendment number 02, 2/18/83, 11:31529 (RA;US)

AQUEOUS HUMOR
See BODY FLUIDS

AQUIFERS
Radionuclide Migration
Far field migration of radionuclides in two dimensional ground water flows though geologic media, 11:31585 (R;BR)

ARAMIDS
Photon Collisions
Measurements of laser generated impulse, 11:32943 (R;US)
Pulses
Measurements of laser generated impulse, 11:32943 (R;US)

ARC COAL PROCESS
Commercialization
Production and utilization of coal water fuels, 11:31327 (J;US)
ARC FURNACES
Control Systems
Drop short control of electrode gap, 11:32519 (P;US)
Electrodes
Drop short control of electrode gap, 11:32519 (P;US)
ARCHAEOLOGICAL SPECIMENS
Activation Analysis
Intercomparison of the Asaro-Perlman and Brookhaven archaeological ceramic analytical standards, 11:32341 (J;CH)
ARCHITECTURE
Education
Architecture, energy and education. Case studies in the evaluation of the teaching passive design in architecture workbook series, 11:32067 (R;US)
ARGON
Atom-Atom Collisions
Collision kernel and interatomic potential, 11:32956 (J;US)
Electron-Atom Collisions
Theory of initial yields of ions generated by electrons in binary mixtures, 11:32947 (J;US)
ARGON 34
Beta-Plus Decay
βi decays of ^{34}Ar, ^{34}Cl and ^{38}K, 11:33120 (RA;US)
ARGON 40 REACTIONS
Heavy Ion Fusion Reactions
^{197}Au target fragmentation induced by 1.8 GeV/A ^{40}Ar, 11:33157 (RA;US)
Competing mechanisms in the ^{40}Ar+^{68}Zn reaction between 10 and 30 MeV/nucleon, 11:33135 (R;FR)
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Target fragment kinematics in the interaction of 44 MeV/A ^{40}Ar with ^{197}Au, 11:33156 (RA;US)
Incomplete Fusion Reactions
Competing mechanisms in the ^{40}Ar+^{68}Zn reaction between 10 and 30 MeV/nucleon, 11:33135 (R;FR)
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Precompound-Nucleus Emission
Light particle correlations in Ar + Au reaction at 60 MeV/A, 11:33132 (R;FR)
Spallation
Radiochemical studies of unusual projectile fragments, 11:33131 (RA;US)
ARGON IONS
Electron-Ion Collisions
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
Population Inversion
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
X-Ray Spectra
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
ARGON METHOD
See ISOTOPE DATING
ARGONNE NATIONAL LABORATORY
See ANL
ARID LANDS
Revegetation
Edaphic and crop production changes resulting from pipeline installation in semiarid agricultural ecosystems, 11:32867 (BA;US)
ARIZONA
Geothermal Resources
Geothermal resource evaluation of the Yuma area, 11:31762 (R;US)
ARKANSAS POWER-LIGHT-1 REACTOR
See ARKANSAS-1 REACTOR
ARKANSAS-1 REACTOR
Pope, Arkansas, USA
Secondary Coolant Circuits
Resin and ionics leakage from condensate polishers with and without inert resin. Final report, 11:31806 (R;US)
Water Quality
Resin and ionics leakage from condensate polishers with and without inert resin. Final report, 11:31806 (R;US)
AROMATIC COMPOUNDS
See AROMATICS
AROMATICS
See also ANILINE
BENZENE
POLYCYCLIC AROMATIC HYDROCARBONS
TETRALIN
Chemical Radiation Effects
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Excitation
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Gas Chromatography
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Hydrogenation
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)
ARRAY PROCESSORS
Architecture
FASTRUN - a high performance computing device for molecular mechanics using a pipeline architecture, 11:33490 (J;US)
Hypercube project and a simulator for a hypercube of computers, 11:33471 (R;US)
C Codes
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
Computerized Simulation
Hypercube project and a simulator for a hypercube of computers, 11:33471 (R;US)
Message-passing multiprocessor simulator, 11:33477 (R;US)
Data-Flow Processing
FASTRUN - a high performance computing device for molecular mechanics using a pipeline architecture, 11:33490 (J;US)
E Codes
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
Fault Tree Analysis
Formal verification of properties of digital systems using an automated reasoning system, 11:33465 (R;US)
I Codes
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
P Codes
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
Performance
FASTRUN - a high performance computing device for molecular mechanics using a pipeline architecture, 11:33490 (J;US)
Programming
Sparse Cholesky factorization on a local-memory multiprocessor, 11:33476 (R;US)
Systems Analysis
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
T Codes
Set of FORTRAN routines for multitask timing analysis on shared memory machines, 11:33479 (R;US)
ARSENIC
Crystal Structure
Rhombohedral phase stability of the group-VA elements, 11:32265 (J;US)

Migration
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments, 11:31341 (RA;US)
ARTIFICIAL INTELLIGENCE
Machine learning using a higher order correlation network, 11:33473 (R;US)
ARYL RADICALS
Excited States
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
Fluorescence
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
Lifetime
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
Photochemistry
Photochemistry and photophysics of phenylmethyl radicals, 11:32381 (J;US)
ASBESTOS
Biological Accumulation
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
Biological Effects
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
ASHES
See also FLY ASH
Agglomeration
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. First quarterly report, November 12, 1984-March 30, 1985, 11:31323 (R;US)
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. Second quarterly report, April 1-June 30, 1985, 11:31324 (R;US)
Chemical Composition
Beneficiation processes for ultrafinely ground low rank coals, 11:31359 (RA;US)
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Extraction
Process for extraction of mineral values from low rank coals, 11:32098 (RA;US)
Materials Recovery
A molten salt reactor for dispersed solid phase chlorination, 11:31347 (B;US)
Resource Potential
Process for extraction of mineral values from low rank coals, 11:32098 (RA;US)
Waste Product Utilization
Selection of ash for utilization and economics of ash use in various products, 11:31342 (RA;US)
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
ASTATINE 208
Energy Levels
Nuclear data sheets for A = 208, 11:33160 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 208, 11:33160 (J;US)
ATF TORSATRON
Design
Stellarator to fusion plasma confinement, 11:33356 (J;US)
Engineering
Stellarator to fusion plasma confinement, 11:33356 (J;US)
Research Programs
Fusion Energy Division Annual Information Meeting. Agenda and abstracts, April 8-9, 1986, 11:33408 (R;US)
ATLANTIC OCEAN
See also CHESAPEAKE BAY
Benthos
Benthic megafauna at deep-sea study areas W-N and E-N, 11:31528 (RA;US)
Geologic Deposits
Distribution of glacial erratics in the Northeast Atlantic. Final report, 11:31513 (R;GB)
Isotope Ratio
Interim status report: radiochemical studies in support of the low Level Waste Ocean Disposal Program, 11:31530 (RA;US)
Oceanography
Cruise report Endeavor cruise EN-085 North Atlantic May 27-June 8, 1982, 11:31536 (RA;US)
Cruise report Endeavor cruise EN-098 North Atlantic April 23-May 4, 1983, 11:31543 (RA;US)
Endeavor cruises 053, 069, and 085 CTD and hydrographic data report, 11:31542 (RA;US)
Report on suspended particulate analyses, 11:31539 (RA;US)
Sediments
Northern Hatteras Abyssal Plain sediments: Geotechnical properties, 11:31532 (RA;US)
Zooplankton
Zooplankton data report: the Marginal Ice Zone Experiment MIZEX, 1984, 11:32768 (R;US)
ATMOSPHERIC PRECIPITATIONS
Variations
Data bases for isolating the effects of the increasing carbon dioxide concentration, 11:32696 (R;US)
Long-term changes in precipitation patterns, 11:32697 (R;US)
ATMOSPHERIC PRESSURE
Variations
Data bases for isolating the effects of the increasing carbon dioxide concentration, 11:32696 (R;US)
ATOM COLLISIONS
See also ATOM-ATOM COLLISIONS
ATOM-MOLECULE COLLISIONS
ELECTRON-ATOM COLLISIONS
ION-ATOM COLLISIONS
MUON-ATOM COLLISIONS
Excitation
Coupled-channels calculations of excitation and ionization in collisions of negatively charged projectiles with atoms, 11:32966 (BA;NL)
Inner-Shell Ionization
Coupled-channels calculations of excitation and ionization in collisions of negatively charged projectiles with atoms, 11:32966 (BA;NL)
ATOM-ATOM COLLISIONS
Mathematical Models
Collision kernel and interatomic potential, 11:32956 (J;US)
ATOMIC BOMBS
See NUCLEAR WEAPONS
ATOMIC ENERGY
See NUCLEAR ENERGY
ATOMIC EXPLOSIONS
See NUCLEAR EXPLOSIONS
ATOMIC IONS
Coordinate the above descriptor with a descriptor for the appropriate specific ion.
Auger Effect
Dielectronic satellite spectra for He-like ions, 11:32959 (J;US)
Energy-Level Transitions
Dielectronic satellite spectra for He-like ions, 11:32959 (J;US)
ATOMIC PHYSICS
Use only for indexing articles of very broad coverage, such as annual reviews, text books, etc.
Meetings
Proceedings of the workshop on atomic physics with stored cooled heavy ion beams, 11:32930 (R;US)
ATOMIC SHELLS
See ELECTRONIC STRUCTURE
ATOMIC WEAPONS
See NUCLEAR WEAPONS
ATOM-MOLECULE COLLISIONS
Chemical Reactions
Reactive scattering of Na(3 $^2P_{3}$/sub //$_{2}$)+HCl, 11:32951 (J;US)

Excitation
Coupled-channel study of rotational excitation of an electronically excited diatomic molecule by atom impact: He(^{1}S)+H_2 (B $^1\Sigma^+$/sub u/), 11:32950 (J;US)

ATOMS
See also HADRONIC ATOMS
Energy-Level Transitions
Relativistic calculation of atomic transition probabilities, 11:32962 (BA;US)
Fermi-Segre Formula
Improved Fermi-Segre formula for absolute value squared of (R/sub n/,1/r/sup 1/)(0) for singular and nonsingular potentials, 11:33277 (J;US)
Motion
Atomic motion in a standing wave. Master's thesis, 11:32927 (R;US)
Radiation Pressure
Atomic motion in a standing wave. Master's thesis, 11:32927 (R;US)
Single-Particle Model
Relativistic calculation of atomic transition probabilities, 11:32962 (BA;US)

ATP
Biosynthesis
Metabolism of H_2 and CO_2 by Methanobacterium, 11:31624 (RA;US)

AUSTENITIC STEELS
Prior to February, 1978 STEELS and AUSTENITE were used to index this concept.
Embrittlement
Modification of the grain boundary microstructure of the austenitic PCA stainless steel to improve helium embrittlement resistance (14Cr-16Ni-2.5Mo-.25Ti-.4Si-.05C), 11:32159 (R;US)
Grain Boundaries
Modification of the grain boundary microstructure of the austenitic PCA stainless steel to improve helium embrittlement resistance (14Cr-16Ni-2.5Mo-.25Ti-.4Si-.05C), 11:32159 (R;US)
Microstructure
Microstructural development of PCAs irradiated in HFIR at 300 to 400°C, 11:32165 (R;US)
Physical Radiation Effects
Microstructural evolution in an austenitic stainless steel fusion reactor first wall, 11:32158 (R;US)
Swelling
Microstructural evolution in an austenitic stainless steel fusion reactor first wall, 11:32158 (R;US)
Uses
Alloys in energy development, 11:32218 (J;CH)

AUTOMOBILE EFFICIENCY STANDARDS
See AUTOMOBILES

AUTOMOBILE INDUSTRY
See AUTOMOTIVE INDUSTRY

AUTOMOBILES
Forecasting
Wheel traces of uncertainty - Shell forecasting of the automobile market development through the year 2000, 11:32014 (R;DE;In German)
Fuel Economy
Analysis of the capabilities of domestic auto-manufacturers to improve corporate average fuel economy (information current as of November 1985), 11:32118 (R;US)
Gas Turbine Engines
An investigation of the issues surrounding the fuels adaptability of the advanced gas turbine, 11:32125 (B;US)
Market
Wheel traces of uncertainty - Shell forecasting of the automobile market development through the year 2000, 11:32014 (R;DE;In German)

AUTOMOTIVE FUELS
Fuel Substitution
State of knowledge of environmental concerns related to natural-gas-fueled vehicles, 11:32151 (J;US)

AUTOMOTIVE INDUSTRY
Forecasting
Analysis of the capabilities of domestic auto-manufacturers to improve corporate average fuel economy (information current as of November 1985), 11:32118 (R;US)
Marketing Research
Update on the Electric Vehicle Development Corporation, 11:32127 (J;US)

AUTORADIOGRAPHS
See IMAGES

AVIATION FUELS
Accidents
Development of a fuel-spill/vapor-migration modeling system. Final report, October 1984-March 1985, 11:31403 (R;US)

AXIONS
Standard axion reconsidered, 11:33024 (R;DE)

B

B MESONS
Lifetime
Improved b lifetime measurement from MAC, 11:32995 (BA;US)
Particle Production
Hadroduction of heavy flavors, 11:32983 (R;US)

BACTERIA
See also CLOSTRIDIUM
METHANOGENIC BACTERIA
METHANOTROPHIC BACTERIA
Biochemical Reaction Kinetics
Energetics of H_2-producing syntrophic bacteria, 11:31626 (RA;US)
Performance Testing
Strategies for the isolation of microorganisms responsible for polyphosphate accumulation (Acinetobacter lwoffii, A. calcoaceticus, Pseudomonas vesicularis), 11:32836 (RA;US)

BAG MODEL
Chiral Symmetry
MIT bag model with chiral solitons, 11:33041 (J;US)
Solitons
MIT bag model with chiral solitons, 11:33041 (J;US)

BAKING
Energy Efficiency
Installation of a direct fired Lanham bread baking system. A demonstration at Family Loaf Bakery Ltd. [Bristol], 11:32099 (R;GB)

BALLOONING INSTABILITY
Toroidal Configuration
Nonlinear theory of large-mode-number ballooning modes in fully toroidal geometry, 11:33354 (J;GB)

BANKS
See COMMERCIAL BUILDINGS

BARC
Research Programs
Progress report [of] Technical Physics and Prototype Engineering Division, April 1982-March 1984, 11:32641 (R;IN)

BARGES
Preliminary assessment of costs and risks of transporting spent fuel by barge, 11:31482 (R;US)

BARITE
Solubility
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)

BARIUM
Emission Spectroscopy
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)

Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
BARIUM 131
Radiochemistry
Radiochemical studies using a 42 MeV cyclotron. Final report, September 1, 1983-February 28, 1986, 11:32825 (R;US)
BARYON NUMBER 2 RESONANCES
See DIBARYON RESONANCES
BASALT
Corrosive Effects
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Ground Water
Limitations in determining redox chemistry in basalt groundwaters at the Hanford site, 11:32899 (R;US)
Hydrothermal Alteration
Hydrothermal studies of simulated defense waste glass plus basalt, 11:32303 (BA;US)
Leaching
Hydrothermal studies of simulated defense waste glass plus basalt, 11:32303 (BA;US)
Radioactive Waste Facilities
Probabilistic modeling of radionuclide release at the waste package subsystem boundary of a repository in basalt, 11:31589 (R;US)
Rock-Fluid Interactions
^{237}Np and ^{239}Pu solution behavior during hydrothermal testing of simulated nuclear waste glass with basalt and steel, 11:32302 (BA;US)
investigation of the hydrothermal interaction of ^{99}Tc-doped glass with basalt repository nuclear waste package components, 11:32891 (BA;US)
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Sorptive Properties
Sorption-capacity limited retardation of radionuclides transport in water-saturated packing materials, 11:31592 (BA;US)
BATTERIES (ELECTRIC)
See ELECTRIC BATTERIES
BAUXITE
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
BEAM ANALYZERS
For momentum analysis of charged particle beams.
Performance
Improvement and testing of the momentum filter, 11:32597 (RA;US)
BEAM BUNCHERS
Design
Pretandem buncher, 11:32530 (RA;US)
BEAM DYNAMICS
Computerized Simulation
Solution of the two-dimensional Poisson equation using fast Fourier transformation in charged particle beam simulation, 11:32550 (R;SU;In Russian)
Coupling
Longitudinal-transverse mode coupling in localized structures with orbit dependent higher order mode losses, 11:32547 (R;DE)
Poisson Equation
Solution of the two-dimensional Poisson equation using fast Fourier transformation in charged particle beam simulation, 11:32550 (R;SU;In Russian)
BEAM EXTRACTION
Three-Dimensional Calculations
End effects in slot extraction for a SITEX negative ion source, 11:32586 (J;US)
BEAM MONITORS
Design
^{14}N beam position stabilization system, 11:32548 (RA;US)
Performance
^{14}N beam position stabilization system, 11:32548 (RA;US)
BEAM NEUTRALIZATION
Efficiency
Photodetachment technology, 11:32587 (J;US)
Gases
Gas heating effects in the neutralisers of neutral beam injection lines, 11:33297 (R;FR)
BEAM OPTICS
Design
^{14}N beam position stabilization system, 11:32548 (RA;US)
Performance
^{14}N beam position stabilization system, 11:32548 (RA;US)
BEAM STRIPPERS
Fabrication
Target preparation, 11:32568 (RA;US)
BEAM TRANSPORT
Sputter source elevation, 11:32567 (RA;US)
BEAUTY PARTICLES
Particle Production
New results on flavor production at PEP, 11:33036 (BA;US)
BEHAVIOR
Limited to living systems.
Computerized Simulation
Aerosol behavior modeling, 11:31937 (RA;US)
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Mathematical Models
Aerosol behavior model validation procedure, 11:31940 (RA;US)
BELGIUM
BCSTPC
22 July 1985 - Act on third party liability in the field of nuclear energy, 11:31906 (R;BE;In French and Dutch)
3 July 1985: Convention signed in Brussels on 31 January 1963, supplementary to the Paris Convention of 29 July 1960 on Third Party Liability in the Field of Nuclear Energy and Act approving the Protocols to amend the Paris Convention and the Brussels Supplementary Convention, 11:31907 (R;BE;In French and Dutch)
Bilateral Agreements
17 January 1984 - Act approving the Agreement between the Kingdom of Belgium and the Federal Republic of Germany on mutual assistance in the event of catastrophes or serious accidents, signed in Brussels on 6 November 1980, 11:32000 (R;BE;In French, Dutch and German)
Irradiation Devices
16 July 1985: Royal Order amending the Royal Order of 24 April 1964 on approval of a certain type of apparatus containing radioactive substances, made in implementation of Section 3.1.d/2 of the Royal Order of 28 February 1963 enacting General Regulations for Protection of the Population and Workers against the Hazards of Ionizing Radiation, 11:31615 (R;BE;In French and Dutch)
PCOTPL
22 July 1985 - Act on third party liability in the field of nuclear energy, 11:31906 (R;BE;In French and Dutch)
3 July 1985: Convention signed in Brussels on 31 January 1963, supplementary to the Paris Convention of 29 July 1960 on Third Party Liability in the Field of Nuclear Energy and Act approving the Protocols to amend the Paris Convention and the Brussels Supplementary Convention, 11:31907 (R;BE;In French and Dutch)
Transport Regulations
17 May 1985 - Ministerial Order made in implementation of Sections 3, 6 and 8 of the Royal Order of 5 November 1982 on training certificates for drivers of vehicles for road transport of hazardous materials in containers, 11:31486 (R;BE;In French and Dutch)
BELL INEQUALITY
See BELL THEOREM
BELL THEOREM
Some properties of the functions satisfying Bell's inequalities in relation to quantum mechanics, 11:33256 (R;FR;In French)
BELLEFONTE-1 REACTOR
Scottsboro, Alabama

Baseline Ecology
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 1, 11:31832 (R;US)
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 2. Tables, 11:31833 (R;US)
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 3. Appendices, 11:31834 (R;US)
Containment Systems
Containment response and radiological release for a TMLB' accident sequence in a large dry containment, 11:31958 (R;US)
Reactor Operation
Containment response and radiological release for a TMLB' accident sequence in a large dry containment, 11:31958 (R;US)

BELLEFONTE-2 REACTOR
Scottsboro, Alabama
Baseline Ecology
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 1, 11:31832 (R;US)
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 2. Tables, 11:31833 (R;US)
Preoperational assessment of water quality and biological resources of Guntersville Reservoir in the vicinity of Bellefonte Nuclear Plant, 1974-1984. Volume 3. Appendices, 11:31834 (R;US)

BENTONITE
Permeability
Rapid increases in permeability and porosity of bentonite-sand mixtures due to alteration by water vapor, 11:32305 (BA;US)
Porosity
Rapid increases in permeability and porosity of bentonite-sand mixtures due to alteration by water vapor, 11:32305 (BA;US)
Radionuclide Migration
Nonlinear concentration effects on radionuclide diffusion and mobility in compacted bentonite, 11:32307 (BA;US)
Swelling
Swelling pressures of compacted bentonite/sand mixtures, 11:32306 (BA;US)

BENZANTHRACENE
Carcinogenesis
Carcinogenic responses to chemicals applied directly to rat mammary glands in situ, 11:32862 (J;US)

BENZENE
Catalytic Cracking
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Emission
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Gas Chromatography
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Oxidation
Aromatics oxidation and soot formation in flames. Progress report for year beginning August 15, 1985, 11:32398 (R;US)

BENZOPYRROLES
See INDOLES

BENZOTHIOPHENES
See THIONAPHTHENES

BERKELEY BEVALAC
See BEVALAC

BERKELEY SUPERHILAC
See SUPERHILAC

BERYLLIA
See BERYLLIUM OXIDES

BERYLLIUM 10
Mass Spectroscopy
AMS with carbon and beryllium: C-14 and Be-10 radiochronology, 11:32752 (RA;US)

BERYLLIUM 9 TARGET
Carbon 12 Reactions
Two-step direct processes in the $^{12}C+^{9}Be$ system, 11:33114 (R;PL)
Neutron Reactions
Neutron scattering cross sections from ^{14}N and ^{9}Be at 11, 14, and 17 MeV, 11:33118 (J;US)

BERYLLIUM ALLOYS
Elasticity
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)
Phonons
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)
Specific Heat
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)

BERYLLIUM OXIDES
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)
Thermal Conductivity
Thermal conductivity of mixed beryllia/Li ceramic in sphere-pac forms, 11:33396 (R;US)

BESSEL DIFFERENTIAL EQUATION
See FOKKER-PLANCK EQUATION

BETA BEAMS (ELECTRONS)
See ELECTRON BEAMS

BETA DETECTION
Liquid Ionization Chambers
Photosensitive dopants for liquid argon, 11:32636 (J;NL)

BETA SOURCES
Energy Spectra
NBS facilities for the study of radiation-protection instruments, 11:32632 (RA;US)

BETHE-SALPETER EQUATION
Wave Functions
Dynamic equations for gauge-invariant wave functions, 11:33061 (RA;SU;In Russian)

BEVALAC
Accelerator Facilities
Accelerator development activities, 11:32577 (RA;US)
Operation
BEVALAC operation's update, 11:32539 (R;US)
Operations summary, 11:32533 (RA;US)
Research Programs
Research by accelerator users: highlights, 11:33097 (RA;US)

BHABHA ATOMIC RESEARCH CENTER

BIOMASS
Anaerobic Digestion
Methane from biomass and waste. Annual report for 1984. Technical progress report, 11:31653 (R;US)
Bibliographies
Retrospective search on biomass harvesting techniques including materials handling and storage, 11:31700 (R;IE)
Biodegradation
Eighth symposium on biotechnology for fuels and chemicals. Program and abstracts, 11:31659 (R;US)
Energy Source Development
Experimental assessment of native and naturalized species of plants as renewable sources of energy in Great Britain. Final report, 11:31698 (R;DE)
Fluidized Bed Refuse Gasification
Development of the IGT-RENUGAS process, 11:31654 (J;US)
Gasification
Energy from biological processes. Vol. I, 11:31652 (R;US)
Liquefaction
Integrating a microcomputer for online monitoring of an existing biomass conversion indirect liquefaction process, 11:31646 (RA;US)
Materials Handling
Retrospective search on biomass harvesting techniques including materials handling and storage, 11:31700 (R;IE)
BIOMASS CONVERSION PLANTS
Use only for plants converting biomass to fuel, do NOT use for plants preparing wastes and biomass for combustion.
Economics
High solids digestion of MSW to methane by anaerobic digestion (Municipal solid wastes), 11:31636 (RA;US)
Mathematical Models
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Monitoring
Integrating a microcomputer for online monitoring of an existing biomass conversion indirect liquefaction process, 11:31646 (RA;US)
On-Line Control Systems
Integrating a microcomputer for online monitoring of an existing biomass conversion indirect liquefaction process, 11:31646 (RA;US)
BIOMEDICAL RADIOGRAPHY
See also INDUSTRIAL RADIOGRAPHY.
Computer Calculations
BRA: A Breast Radiation Analysis program, 11:32834 (R;ZA)
BIOREACTORS
Prior to March 1983 this concept was indexed to CHEMICAL REACTORS.
Additives
Nutrient requirements for anaerobic digestion, 11:31631 (RA;US)
Design
Anaerobic SBR treatment of coal conversion wastewaters. Second quarterly report, 11:31313 (R;US)
Gasification of concentrated particulate and solid substrates by biphasic anaerobic digestion, 11:31637 (RA;US)
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Fluidized Beds
Fixed-film, fluidized-bed bioreactors for biooxidation of coal conversion wastewaters. Progress report, October 1, 1984-September 30, 1985, 11:31321 (R;US)
Loading Rate
High solids digestion of MSW to methane by anaerobic digestion (Municipal solid wastes), 11:31636 (RA;US)
Nutrients
Nutrient requirements for anaerobic digestion, 11:31631 (RA;US)
Performance
Preliminary evaluation of the effects of A d-RDF binding agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
BIOSPHERE
Radiation Monitoring
Report on R and D activities of Air Monitoring Section (Division of Radiological Protection) 1979-1984, 11:32740 (R;IN)
BISMUTH
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
X-Ray Spectra
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
BISMUTH 195
Energy Levels
Excited states in neutron-deficient ^{195}Bi, 11:33151 (J;US)
BISMUTH 208
Energy Levels
Nuclear data sheets for A = 208, 11:33160 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 208, 11:33160 (J;US)
BITTER SPAR
See DOLOMITE
BITUMINOUS COAL
Calorific Value
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Coal Gasification
Steam gasification of coal. Project prototype plant nuclear process heat. Final report, 11:31296 (R;DE;In German)
Combustion
Combustion of calcium treated coals, 11:31373 (B;US)
Consumption Rates
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Production
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
BLACK SHALES
Geology
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Mathematical Models
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Permeability
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Porosity
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Resource Assessment
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)

BLOOD FLOW
Dynamic Function Studies
Re: Brain blood-flow measurement with bolus intravenous $H_2 15O$, 11:32793 (J;US)
BODY FLUIDS
See also URINE
Clearance
Effects of sulfuric acid mist inhalation on mucous clearance and on airway fluids of rats and guinea pigs, 11:32858 (J;US)
BOHUNICE V-1 REACTOR
Trnava, West Slovakia, Czechoslovakia
Comparative Evaluations
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Condenser Cooling Systems
Effect of climatic conditions on possible increase in output of WWER-440 nuclear power plant unit, 11:31822 (RA;CS;In Slovak)
Electrical Equipment
Probability analysis used to assess the reliability of electrical systems of WWER type nuclear power plants, 11:31826 (RA;CS;In Slovak)
Energy Consumption
Increasing operating efficiency and reducing power and heat consumption of V-1 nuclear power plant, 11:31820 (RA;CS;In Slovak)
Failures
Analysis of failures of V-1 nuclear power plant significant for safety, and lesson for permanently increasing safety, 11:31905 (RA;CS;In Slovak)
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Fire Hazards
Fire fighting precautions at Bohunice Atomic Power Plants, 11:31817 (RA;CS;In Slovak)
Probability assessment of cable fire risks in nuclear power plants, 11:31818 (RA;CS;In Slovak)
Loss of Flow
Safety limits of increasing output of WWER-440 units, 11:31823 (RA;CS;In Czech)
On-Line Systems
Application of microcomputers in V-1 nuclear power plant operation, 11:31816 (RA;CS;In Slovak)
Personal Computers
Application of microcomputers in V-1 nuclear power plant operation, 11:31816 (RA;CS;In Slovak)
Personnel Dosimetry
Dosimetric services and radiation protection during V-1 nuclear power plant operation, 11:31904 (RA;CS;In Slovak)
Pumps
Safety limits of increasing output of WWER-440 units, 11:31823 (RA;CS;In Czech)
Radiation Protection
Dosimetric services and radiation protection during V-1 nuclear power plant operation, 11:31904 (RA;CS;In Slovak)
Reactor Components
Operating reliability of V-1 nuclear power plant components, 11:31824 (RA;CS;In Slovak)
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Reactor Control Systems
Statistical evaluation of failures and repairs of the V-1 measuring and control system, 11:31821 (RA;CS;In Slovak)
Reactor Maintenance
Economics, operating reliability and safety of WWER-440 type nuclear power plants. Part I. Preprints of papers, 11:31813 (R;CS;In Slovak and Czech)
Statistical evaluation of failures and repairs of the V-1 measuring and control system, 11:31821 (RA;CS;In Slovak)
Reactor Operation
Economics, operating reliability and safety of WWER-440 type nuclear power plants. Part I. Preprints of papers, 11:31813 (R;CS;In Slovak and Czech)
Increasing operating efficiency and reducing power and heat consumption of V-1 nuclear power plant, 11:31820 (RA;CS;In Slovak)
Preparing nuclear power plant units for operation, 11:31819 (RA;CS;In Slovak)
Results and prospects of operation of Bohunice Atomic Power Plants, 11:31814 (RA;CS;In Slovak)
Results and experience with V-1 nuclear power plant operation, 11:31815 (RA;CS;In Slovak)
Reactor Safety
Analysis of failures of V-1 nuclear power plant significant for safety, and lesson for permanently increasing safety, 11:31905 (RA;CS;In Slovak)
Economics, operating reliability and safety of WWER-440 type nuclear power plants. Part I. Preprints of papers, 11:31813 (R;CS;In Slovak and Czech)
Reactor Stability
Results and experience with V-1 nuclear power plant operation, 11:31815 (RA;CS;In Slovak)
BOHUNICE V-2 REACTOR
Trnava, West Slovakia, Czechoslovakia
Fire Hazards
Fire fighting precautions at Bohunice Atomic Power Plants, 11:31817 (RA;CS;In Slovak)
Loss of Flow
Safety limits of increasing output of WWER-440 units, 11:31823 (RA;CS;In Czech)
Pumps
Safety limits of increasing output of WWER-440 units, 11:31823 (RA;CS;In Czech)
Reactor Operation
Preparing nuclear power plant units for operation, 11:31819 (RA;CS;In Slovak)
BOILERS
Air Pollution Abatement
Environmental assessment of NH_3 injection for an industrial package boiler. Volume 1. Technical results. Final report, January 1983-January 1984, 11:32518 (R;US)
EPA's LIMB (Environmental Protection Agency's Limestone Injection Multistage Burner) research, development, and demonstration program. Report for September 1984-January 1986, 11:31784 (R;US)
Air Pollution Monitoring
Developing an industrial boiler inventory, 11:32113 (J;US)
Control Systems
Analysis of limit cycling on a boiler feedwater control system, 11:31838 (R;GB)
Deposits
Beneficiation processes for ultrafinely ground low rank coals, 11:31359 (RA;US)
Energy Sources
Electricity versus natural gas in small industrial boilers. Working paper, 11:32109 (R;US)
Flue Gas
Environmental assessment of a watertube boiler firing a coal-water slurry. Volume 1. Technical results. Final report, January 1984-March 1985, 11:31346 (R;US)
Fouling
Coal Cleaning Test Facility campaign report No. 3: Stockton-Lewiston seam coal, 11:31365 (R;US)
Retrofitting
Beneficiation processes for ultrafinely ground low rank coals, 11:31359 (RA;US)
Technology Transfer
Status report on DOE's coal-water mixtures program, 11:32112 (J;US)
BOILING WATER COOLED AND MODERATED REACTO
See BWR TYPE REACTORS
BOLTZMANN-VLASOV EQUATION
Numerical Analysis
Particle methods for Boltzmann equation, 11:33290 (R;FR;In French)

Particles
Particle methods for Boltzmann equation, 11:33290 (R;FR;In French)

Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers (Aluminum brass, aluminum bronze-alloy D), 11:32179 (R;US)
BRAYTON CYCLE POWER SYSTEMS
Design
Rockwell SR-100G reactor turboelectric space power system, 11:31855 (BA;US)
BRAZIL
Geochemical Surveys
Mapping Brazilian radioactive minerals by gamma-ray spectrometry and using a germanium detector, 11:31471 (R;BR;In Portuguese)
Radiometric Surveys
Mapping Brazilian radioactive minerals by gamma-ray spectrometry and using a germanium detector, 11:31471 (R;BR;In Portuguese)
BREAKWATERS
See DAMS
BREASTS
See MAMMARY GLANDS
BREEDING BLANKETS
Breeding Ratio
Thermal conductivity of mixed beryllia/Li ceramic in sphere-pac forms, 11:33396 (R;US)
Configuration
The integrated-blanket-coil concept applied to the poloidal field and blanket systems of a tokamak reactor, 11:33449 (J;US)
Materials Testing
Tritium control in helium-cooled blankets, 11:33429 (J;US)
Permeability
Modeling and experiments on tritium permeation in fusion reactor blankets, 11:33422 (J;US)
Protective Coatings
Modeling and experiments on tritium permeation in fusion reactor blankets, 11:33422 (J;US)
BREMSSTRAHLUNG (MAGNETIC)
See SYNCHROTRON RADIATION
BRINES
Corrosive Effects
Corrosion of candidate iron-base waste package structural barrier materials in moist salt environments, 11:32224 (BA;US)
Geochemistry
Extension of the EQ3/6 computer codes to geochemical modeling of brines, 11:32902 (BA;US)
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
Natural Radioactivity
Behavior of natural uranium, thorium, and radium isotopes in the Wolfcamp brine aquifers, Palo Duro Basin, Texas, 11:31594 (BA;US)
Radiolysis
Gamma and alpha radiolysis of salt brines, 11:32310 (BA;US)
Radionuclide Migration
Salton Sea geothermal field as a natural analog for the near-field in a salt high-level nuclear waste repository, 11:31555 (BA;US)
Rock-Fluid Interactions
Salton Sea geothermal field as a natural analog for the near-field in a salt high-level nuclear waste repository, 11:31555 (BA;US)
BROMINE 77
Radiochemistry
Radiochemical studies using a 42 MeV cyclotron. Final report, September 1, 1983-February 28, 1986, 11:32825 (R;US)
BRONZE
Cathodic Protection
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers (Aluminum brass, aluminum bronze-alloy D), 11:32179 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers (Aluminum brass, aluminum bronze-alloy D), 11:32179 (R;US)
BROOKHAVEN HIGH FLUX BEAM REACTOR

Building Codes
Codes, standards, and requirements for DOE facilities: natural phenomena design, 11:32483 (RA;US)
Cogeneration
Economic-screening guidebook for cogeneration in buildings. Report for January 1983-November 1985, 11:32073 (R;US)

Construction
Maintaining Department of Energy facilities general design criteria, 11:32481 (RA;US)
Decommissioning
Decontamination and decommissioning of the extraction chemical room at the West Valley Demonstration Project. Final topical report, December 1982-April 1984, 11:31503 (R;US)
Decontamination and renovation of the Master/Slave Manipulator Repair Shop and the Chemical Crane Room at the West Valley Demonstration Project. Final topical report, June 1982-June 1983, 11:31501 (R;US)
Decontamination
Decontamination of a pressurised suit area at AEE Winfrith. Part 1. Dry suction cleaning and treatment with chemical foams, 11:32390 (R;GB)
Decontamination and decommissioning of the extraction chemical room at the West Valley Demonstration Project. Final topical report, December 1982-April 1984, 11:31503 (R;US)
Decontamination and renovation of the Master/Slave Manipulator Repair Shop and the Chemical Crane Room at the West Valley Demonstration Project. Final topical report, June 1982-June 1983, 11:31501 (R;US)
Initial decontamination of the equipment decontamination room at the West Valley Demonstration Project. Topical report, September 1983-May 1985, 11:31499 (R;US)
Design
Base isolation: a new strategy for earthquake protection of buildings, 11:32496 (RA;US)
Circuit theory approach to modeling passive solar structures, 11:31746 (RA;US)
Design considerations and adaptations for development in the flood plains, 11:32490 (RA;US)
Development of new codes for seismic design criteria, 11:32485 (RA;US)
Earthquake experience data on power and industrial structures: applications to seismic design and evaluation, 11:32499 (RA;US)
Maintaining Department of Energy facilities general design criteria, 11:32481 (RA;US)
Review of state-of-the-art in building energy design tools, 11:32049 (RA;US)
Seismic Safety Guide, 11:32480 (RA;US)
Energy Analysis
Energy mapping and analysis procedures (EMAPS) as building diagnostics, 11:32056 (RA;US)
Microcomputer based integrated energy design expert systems: a powerful new tool, 11:32061 (RA;US)
UCSD Pascal intrinsic units used to create a file driven early design energy analysis program with input error checking automatically provided by the UCSD Pascal compiler, 11:32060 (RA;US)
Visual thermal analysis, 11:32062 (RA;US)
Energy Conservation
Economic optimization of conservation and solar heating systems, 11:32043 (RA;US)
Energy signature monitor (ESM), a low cost Class B data acquisition system, 11:32046 (RA;US)
ENERSAVE: a program to calculate energy cost savings, 11:32045 (RA;US)
Evaluation method for thermal response factors of precast concrete walls, 11:32041 (R;FR;In French)
Monitored energy performance of new retrofitted buildings: some results from the BECA data compilations, 11:32082 (J;US)
Review of state-of-the-art in building energy design tools, 11:32049 (RA;US)
Ten principles for the design of user-friendly design tools, 11:32050 (RA;US)
Energy Consumption
Energy mapping and analysis procedures (EMAPS) as building diagnostics, 11:32056 (RA;US)
Monitored energy performance of new retrofitted buildings: some results from the BECA data compilations, 11:32082 (J;US)
Window performance and building energy use. Some technical options for increasing energy efficiency, 11:32070 (R;US)
Energy Efficiency
Advanced heat pump research and development sponsored by the US Department of Energy, 11:32085 (J;US)
Failures
Performance of structures during Hurricane Alicia and the Altus Tornado, 11:32500 (RA;US)
Heat Transfer
Microprocessors based hot wire anemometry system for measuring convection air movement within the CSU Class A passive solar test facility, 11:31739 (RA;US)
Heating Systems
Control of heating systems in buildings, 11:32079 (R;FI;In Finnish)
Modifications
Base isolation: a new strategy for earthquake protection of buildings, 11:32496 (RA;US)
Earthquake safety program at Lawrence Livermore National Laboratory, 11:32494 (RA;US)
Facilities upgrade for natural forces: traditional vs. realistic approach, 11:32492 (RA;US)
Lawrence Berkeley Laboratory upgrading approaches to existing facilities, 11:32493 (RA;US)
Seismic upgrading of the Brookhaven High Flux Beam Research Reactor, 11:32491 (RA;US)
Natural Convection
Heat distribution by natural convection, 11:31759 (BA;CA)
Passive Solar Heating Systems
A self-pumping vapor system for hybrid space heating, 11:31760 (BA;CA)
Circuit theory approach to modeling passive solar structures, 11:31746 (RA;US)
Microprocessors based hot wire anemometry system for measuring convection air movement within the CSU Class A passive solar test facility, 11:31739 (RA;US)
SDA/ONE: heat load analysis, 11:31748 (RA;US)
Skyline Plot Program, 11:31741 (RA;US)
Safety
Base isolation: a new strategy for earthquake protection of buildings, 11:32496 (RA;US)
Specification of seismic qualification environment for equipment, 11:32501 (RA;US)
Safety Standards
Analysis and design of Fuel Cycle Plant for natural phenomena hazards, 11:32487 (RA;US)
Codes, standards, and requirements for DOE facilities: natural phenomena design, 11:32483 (RA;US)
Seismic Effects
Base isolation: a new strategy for earthquake protection of buildings, 11:32496 (RA;US)
Effects of earthquakes on power station components, 11:31777 (TJ;GB)
Structural performance of the DOE's Idaho National Engineering Laboratory during the 1983 Borah Peak Earthquake, 11:32498 (RA;US)
Solar Heating Systems
Economic optimization of conservation and solar heating systems, 11:32043 (RA;US)
Solar Space Heating
A self-pumping vapor system for hybrid space heating, 11:31760 (BA;CA)
The gap between active and passive solar heating, 11:31758 (BA;CA)
Solar Water Heating
The gap between active and passive solar heating, 11:31758 (BA;CA)
Space Heating
Passive solar/gas technology characterization and development. Final report, December 1982-March 1985, 11:31754 (R;US)
Thermal Energy Storage Equipment
Microcomputer application for design and optimization of thermal energy storage system, 11:32058 (RA;US)

Walls
Kieper Method: computer application on moisture migration, 11:32057 (RA;US)
BUILDINGS (CONTAINMENT)

Blackouts
Draft regulatory guide and value/impact statement: station blackout, 11:31956 (R;US)
Containment Systems
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Counterflow Systems
TRAC-PF1/MOD 1 independent assessment. Condensation in stratified cocurrent flow, 11:31947 (R;US)
Fuel-Cladding Interactions
Fuel cladding interaction with water coolant in power reactors. A survey report of a coordinated research programme on the investigation of fuel element cladding interaction with water coolant in power reactors, 11:31799 (R;XA)
Role of water chemistry in reliable operation of nuclear power plants, 11:31800 (RA;XA)
Leak Detectors
NDE of stainless steel and on-line leak monitoring of LWRs. Annual report, October 1984-September 1985. Volume 2, 11:31948 (R;US)
Loss of Coolant
Critical flow of subcooled liquid and jet forces, 11:31898 (R;IT)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Meltdown
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Measurements of the condensation of steam on different aerosols under LWR core melt down conditions, 11:31923 (RA;US)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Nuclear Fuels
Fuel Performance Improvement Program. Final report, 11:31794 (R;US)
Radioactive Effluents
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
Reactor Accidents
Assessment of post-critical-heat flux models with Lehigh nonequilibrium data, 11:31950 (R;US)
Nuclear power plant severe accident research plan. Revision 1, 11:31911 (R;US)
Relative importance of individual elements to reactor accident consequences assuming equal release fractions, 11:31952 (R;US)
TRAC-PF1/MOD1 independent assessment. LOBI intermediate break test B-R1M, 11:31946 (R;US)
Reactor Components
Development and validation of a real-time SAFT-UT system for the inspection of light water reactor components. Semiannual report, April 1984-September 1984. Volume 1, 11:31804 (R;US)
Reactor Cooling Systems
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
Reactor Cores
Relative importance of individual elements to reactor accident consequences assuming equal release fractions, 11:31952 (R;US)
Reactor Materials
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report data as of January 31, 1986. Volume 10, No. 2, 11:31803 (R;US)
Reactor Safety
TRAC-PF1/MOD1 independent assessment. LOBI intermediate break test B-R1M, 11:31946 (R;US)
Spent Fuels
Fuel and pool component performance in storage pools, 11:31809 (R;US)
Oxidation of spent fuel at between 250 and 360°C, 11:31796 (R;US)
Water Chemistry
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
Fuel cladding interaction with water coolant in power reactors. A survey report of a coordinated research programme on the investigation of fuel element cladding interaction with water coolant in power reactors, 11:31799 (R;XA)
Role of water chemistry in reliable operation of nuclear power plants, 11:31800 (RA;XA)
Water chemistry of nuclear power reactors. Evaluation of specifications for water quality, 11:31798 (RA;XA)

CALCIUM
Activation Analysis
Measurement of total body calcium by neutron activation, 11:32822 (RA;US)
Adsorption
Electrokinetics, adsorption and colloid study of simulated nuclear waste glasses leached in aqueous solutions, 11:32296 (BA;US)
Calcium 40 Reactions
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)
Correlations
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
CALCIUM 40 REACTIONS
Equations of Motion
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)
CALCIUM 40 TARGET
Antiproton Reactions
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Electron Reactions
Longitudinal-transverse separations in coincidence experiments, 11:33124 (R;FR)
What can be learned from coincidence experiments from nuclei, 11:33175 (R;FR)
Proton Reactions
Excited-state giant resonances observed in the $^{39}K(p,\gamma)^{40}Ca$ and $^{40}Ca(p,\gamma)^{41}Sc$ reactions, 11:33128 (RA;US)
CALCIUM 44 TARGET
Oxygen 18 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymmetric entrance channels, 11:33119 (R;FR;In French)
CALCIUM IODIDES
Phase Diagrams
Iodine waste forms: calcium aluminate hydrate analogues, 11:32322 (BA;US)
CALCIUM IONS
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
CALCIUM OXIDES
See also ZIRCONOLITE
Chemical Reactions
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
Phase Diagrams
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Iodine waste forms: calcium aluminate hydrate analogues, 11:32322 (BA;US)
Sorptive Properties
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal. Report for September 1984-December 1985, 11:32726 (R;US)
CALCIUM SILICATES
Crystal Structure
Calculation of the elastic constants and high-pressure properties of diopside, $CaMgSi_2O_6$, 11:32358 (J;US)
Elasticity
Calculation of the elastic constants and high-pressure properties of diopside, $CaMgSi_2O_6$, 11:32358 (J;US)

GRAPHITE
Alpha Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Biological Accumulation
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
Biological Effects
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
Carbon 12 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Crystallization
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Oxygen 16 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Roughness
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Small Angle Scattering
Small angle X-ray investigations of char structure during gasification, 11:31329 (B;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Stability
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
CARBON 11
Chemical Reaction Kinetics
Carbon-11 labelled phosgene new synthesis - medical interest, 11:32393 (R;FR;In French)
Chemical Reactions
Reactions of energetic carbon-11 in homologous gas-phase halocarbons, 11:32389 (J;US)
Radiochemistry
Radiochemical studies using a 42 MeV cyclotron. Final report, September 1, 1983-February 28, 1986, 11:32825 (R;US)
CARBON 12
E2-Transitions
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
Energy Levels
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
Nuclear Radii
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
CARBON 12 REACTIONS
Cascade Theory
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Compound-Nucleus Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Deformation effects in the statistical decay of the giant dipole resonance, 11:33140 (RA;US)
Statistical GDR decays over a wide range of energy from the $^{63}Cu^{*}$ compound nucleus, 11:33134 (RA;US)
Coupled Channel Theory
Two-step direct processes in the $^{12}C+^{9}Be$ system, 11:33114 (R;PL)
Elastic Scattering
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
Fission
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Heavy Ion Fusion Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Ho target fragmentation induced by intermediate energy ^{12}C and ^{16}O, 11:33149 (RA;US)
Incomplete and complete fusion studies at intermediate energies. Part I, 11:33148 (RA;US)
Target fragment angular distributions in the interaction of 86 MeV/A ^{12}C with ^{197}Au, 11:33154 (RA;US)
Target fragment kinematics for the reaction of 49 MeV/A ^{12}C with ^{197}Au, 11:33155 (RA;US)
Uranium target fragmentation by intermediate and high energy ^{12}C and ^{20}Ne, 11:33163 (RA;US)
Incomplete Fusion Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Incomplete and complete fusion studies at intermediate energies. Part I, 11:33148 (RA;US)
Inelastic Scattering
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
Nuclear Reaction Kinetics
Two-step direct processes in the $^{12}C+^{9}Be$ system, 11:33114 (R;PL)
Nuclear Reaction Yield
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Scattering
Nuclear rainbow scattering with carbon isotopes, 11:33108 (RA;US)
CARBON 12 TARGET
Alpha Reactions
Alpha-particle cross section relevant to gamma-ray astronomy, 11:33105 (RA;US)
Penetrability of the centrifugal barrier and the spin distribution of the compound nucleus, 11:33109 (RA;US)
Antiproton Reactions
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Carbon 12 Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Nuclear rainbow scattering with carbon isotopes, 11:33108 (RA;US)
Study on the ^{12}C structure and theoretical description of nucleus-nucleus scattering, 11:33116 (R;SU;In Russian)
Electron Reactions
What can be learned from coincidence experiments from nuclei, 11:33175 (R;FR)
Proton Reactions
P-C analyzing power between 100 and 750 MeV, 11:33117 (J;NL)
CARBON 13 REACTIONS
Scattering
Nuclear rainbow scattering with carbon isotopes, 11:33108 (RA;US)

CARBON 13 TARGET
Carbon 12 Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Carbon 13 Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Proton Reactions
Theory of the ^{14}N parity mixing measurement, 11:33112 (RA;US)
CARBON 14
Behavior of carbon-14 in waste packages for spent fuel in a repository in tuff, 11:31553 (BA;US)
Mass Spectroscopy
AMS with carbon and beryllium: C-14 and Be-10 radiochronology, 11:32752 (RA;US)
CARBON 14 REACTIONS
Compound-Nucleus Reactions
Intermediate and weak coupling in ^{219}Ra, 11:33158 (J;US)
CARBON 14 TARGET
Carbon 13 Reactions
Nuclear rainbow scattering with carbon isotopes, 11:33108 (RA;US)
CARBON BLACK
Gasification
Catalytic gasification: Isotopic labeling and transient reaction, 11:32401 (B;US)
CARBON DIOXIDE
Biosynthesis
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Chemical Reactions
Interpretation of equilibrium exchange rates for nonelementary reactions, 11:32355 (J;US)
Cost
Estimates of the value of carbon dioxide from the Great Plains Coal Gasification Plant, 11:31374 (R;US)
Demand
Estimates of the value of carbon dioxide from the Great Plains Coal Gasification Plant, 11:31374 (R;US)
Density
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Ecological Concentration
Effects of energy technology on global CO_2 emissions, 11:31981 (R;US)
Electrochemistry
Photoelectrochemical reduction of carbon dioxide. Annual report, May 1984-April 1985, 11:32376 (R;US)
Enthalpy
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Environmental Impacts
Challenge of detecting climate change induced by increasing carbon dioxide, 11:32698 (R;US)
Data bases for isolating the effects of the increasing carbon dioxide concentration, 11:32696 (R;US)
Equations of State
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Greenhouse Effect
Is a rise in global temperature due to the increasing atmospheric CO_2 content predictable, 11:32691 (R;DE;In German)
Heterogeneous Effects
Effects of non-condensible gases on fluid recovery in fractured geothermal reservoirs, 11:31766 (R;US)
Information Centers
CDIC communications, 11:32714 (R;US)
Measuring Methods
Comparison of ethanolamine and potassium hydroxide as quantitative trapping agents for radiolabeled CO_2 in metabolism studies, 11:32815 (J;US)
Photochemistry
Photoelectrochemical reduction of carbon dioxide. Annual report, May 1984-April 1985, 11:32376 (R;US)
Production
Gas evolution during oil shale pyrolysis. Part 1. Nonisothermal rate measurements, 11:31469 (J;GB)
Research Programs
International Geosphere/Biosphere Program, 1984, 11:32755 (R;US)
Separation Processes
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Solubility
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Solvent Properties
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)
Viscosity
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
CARBON DIOXIDE INJECTION
Additives
Improvement of CO_2 flood performance. Quarterly report, October 1-December 31, 1985, 11:31388 (R;US)
Bench-Scale Experiments
Improvement of CO_2 flood performance. Quarterly report, October 1-December 31, 1985, 11:31388 (R;US)
Optimization
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Reagents
Estimates of the value of carbon dioxide from the Great Plains Coal Gasification Plant, 11:31374 (R;US)
Research Programs
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
CARBON IONS
Electron-Ion Collisions
Distorted-wave calculations of dielectronic recombination as a function of electric field strength, 11:32957 (J;US)
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
CARBON ISOTOPES
See also CARBON 11
CARBON 12
CARBON 14
Excitation
Energy transfer and isotopic enrichment in vibrationally pumped diatomic molecules, 11:32362 (BA;US)
CARBON MONOXIDE
Air Pollution Monitoring
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
Chemical Radiation Effects
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Chemical Reactions
Interpretation of equilibrium exchange rates for nonelementary reactions, 11:32355 (J;US)
Emission
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Excitation
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Hydrogenation
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Effects of calcination on adsorption and CO hydrogenation activity/selectivity of potassium-promoted Fe/SiO_2, 11:32352 (B;US)
Laser Isotope Separation
Energy transfer and isotopic enrichment in vibrationally pumped diatomic molecules, 11:32362 (BA;US)
Production
Gas evolution during oil shale pyrolysis. Part 1. Nonisothermal rate measurements, 11:31469 (J;GB)

CARBON OXYCHLORIDE
See PHOSGENE
CARBON STEELS
Coatings
Mechanisms of failure of coatings used in flue gas desulfurization systems, 11:32178 (R;US)
Corrosion
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Corrosion behavior of carbon steels under tuff repository environmental conditions, 11:32225 (BA;US)
Effect of Grande Ronde basalt groundwater composition and temperature on the corrosion of low-carbon steel in the presence of basalt-bentonite packing, 11:32223 (BA;US)
Corrosion Protection
Corrosion inhibitors for carbon steel surfaces in contact with fresh water, 11:31614 (R;IN)
Mechanisms of failure of coatings used in flue gas desulfurization systems, 11:32178 (R;US)
Grain Boundaries
Niobium segregation in the austenitic grain boundary, 11:32184 (RA;BR;In Portuguese)
Hydrogen Embrittlement
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Solidification
Effect of the hypo and hyperstoichiometry of niobium about the solidification of steel with medium carbon content, 11:32183 (RA;BR;In Portuguese)
Stress Corrosion
Stress corrosion cracking tests on electron beam welded carbon steel specimens in carbonate-bicarbonate solution, 11:32155 (R;GB)
CARBON TETRACHLORIDE
Oxidation
Carbon-11 labelled phosgene new synthesis - medical interest, 11:32393 (R;FR;In French)
CARBONATES
Corrosive Effects
Stress corrosion cracking tests on electron beam welded carbon steel specimens in carbonate-bicarbonate solution, 11:32155 (R;GB)
CARBONYL CHLORIDE
See PHOSGENE
CARBONYLS
Only for compounds of metals with carbonyl radicals.
Reduction
Zirconoxycarbene complexes of ruthenium - reduction of coordinated CO in the reaction of a Zr-Ru compound with H_2, 11:32371 (J;US)
CARBOXYLIC ACID ESTERS
See also RETINOIC ACID
Hydrogenation
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986 (Hydrogenolysis of methyl formate), 11:31311 (R;US)
CARBOXYLIC ACID SALTS
See also ACETATES
Anaerobic Digestion
Propionate conversion to butyrate in an anaerobic digester, 11:31632 (RA;US)
Biodegradation
Propionate conversion to butyrate in an anaerobic digester, 11:31632 (RA;US)
Biological Effects
Effects of the addition of propionate and butyrate to thermophilic methane-producing digesters, 11:31633 (RA;US)
Biosynthesis
Propionate conversion to butyrate in an anaerobic digester, 11:31632 (RA;US)
Fermentation
Effect of hydrogen concentration on population distribution and kinetics in methanogenesis of propionate, 11:31625 (RA;US)
CARCINOGENESIS
Information Retrieval
Use of selected toxicology information resources in assessing relationships between chemical structure and biological activity, 11:33492 (J;US)
CARCINOGENS
Risk Assessment
Use of pharmacokinetics in risk analysis, 11:32855 (R;US)
CAROLINA POWER LIGHT ROBINSON-2 REACTOR
See ROBINSON-2 REACTOR
CASCADE IMPACTORS
Calibration
Study of multi-stages cascade impactors, 11:31931 (RA;US)
CASINGS
See COVERINGS
CASKS
See also SPENT FUEL CASKS
Decontamination
Decontamination of a fuel transport flask using chemical foams, 11:32391 (R;GB)
Shielding
Comparison between different codes for shielding calculations for plutonium transport cask, 11:33214 (R;IT)
CAST IRON
Tensile Properties
Tensile behavior of ferritic ductile cast iron, 11:32199 (R;US)
CATALYSTS
See also ELECTROCATALYSTS
Chemical Composition
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Chemical Preparation
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Improved catalysts for liquid hydrocarbon fuels from syngas. Fifth quarterly technical progress report, October-December 1985, 11:31649 (R;US)
Comparative Evaluations
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Deactivation
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Experimental Data
Improved catalysts for liquid hydrocarbon fuels from syngas. Fifth quarterly technical progress report, October-December 1985, 11:31649 (R;US)
Performance Testing
Improved catalysts for liquid hydrocarbon fuels from syngas. Fifth quarterly technical progress report, October-December 1985, 11:31649 (R;US)
Promoters
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Sulfidation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
CATALYTIC CRACKING
Catalysts
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Yields
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)

CATION EXCHANGE CAPACITY
See CATIONS
CATIONS
See also HYDROGEN IONS 1 PLUS
HYDROGEN IONS 2 PLUS
Excitation
Temperature determinations in the inductively coupled plasma using a Fourier transform spectrometer, 11:32360 (J;GB)
CAVITIES
See also BOREHOLES
CRATERS
Natural Convection
Blockage of natural convection boundary layer flow in a multizone enclosure, 11:32472 (R;US)
CAVITY RESONATORS
See also SUPERCONDUCTING CAVITY RESONATORS
Cylindrical Gaussian eigenmodes of a rectangular waveguide resonator: three-dimensional numerical calculation of gain per mode. Technical report, 1 October 1983-30 September 1984, 11:32446 (R;US)
Laser-feedbackcontrol design for passive-ring-laser gyros in a very-high-finesse cavity. Master's thesis, 11:32447 (R;US)
Cleaning
Cleaning and plating of RF cavities:, 11:32563 (RA;US)
Plating
Cleaning and plating of RF cavities:, 11:32563 (RA;US)
Stabilization
Advanced design atomic hydrogen maser research and development. Final report, 1 December 1982-31 December 1985, 11:32438 (R;US)
CEILINGS
Design
Seismic considerations for suspended ceiling systems, 11:32503 (RA;US)
Seismic Effects
Seismic considerations for suspended ceiling systems, 11:32503 (RA;US)
CELL GROWTH (ANIMAL)
See ANIMAL CELLS
CELL NUCLEI
Electrophoresis
Nick translation of HeLa cell nuclei as a probe for locating DNase I-sensitive nucleosomes, 11:32803 (J;US)
CELLS (ANIMAL)
See ANIMAL CELLS
CELLS (BACTERIAL)
See BACTERIA
CELLS (ELECTROLYTIC)
See ELECTROLYTIC CELLS
CELLULASE
Code number 3.2.1.4.
Biosynthesis
Genetic approach to secretion and hyperproduction of cellulases by Trichoderma. Progress report, August 1985-April 1986, 11:32795 (R;US)
CELLULASES
See CELLULASE
CELLULOSE
Acid Hydrolysis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)
Enzymatic Hydrolysis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)
Fermentation
Ethanol production from cellulose by a coculture of Zymomonas mobilis and a clostridium, 11:31660 (J;US)
CEMENTS
See also PORTLAND CEMENT
Bulk Density
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Chemical Composition
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Chemical Reactions
Dissolution kinetics of tuff rock and mechanism of chemical bond formation at the interface with cement grout, 11:32898 (BA;US)
Compression Strength
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Hydrothermal Alteration
Tuff-cement or concrete interactions in the repository environment, 11:32897 (BA;US)
Leaching
Leachability of cement encapsulated West Valley radwaste streams, 11:32320 (BA;US)
Leaching of saltstone, 11:32319 (BA;US)
Leaching of warm-pressed CaZP-cement composite waste forms, 11:32321 (BA;US)
Porosity
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Radioactivation
Choice of cement for the manufacture of concrete to be activated: the potential for reducing the radiological consequences of reactor decommissioning, 11:31890 (R;GB)
CENTRAL HEATING PLANTS
Energy Consumption
Operating microprocessor based system for tracking energy use and cost, 11:32095 (RA;US)
Energy Management Systems
Operating microprocessor based system for tracking energy use and cost, 11:32095 (RA;US)
CENTRAL RECEIVERS
Design
A solid particle central receiver for solar energy, 11:31735 (J;US)
Heat Transfer Fluids
A solid particle central receiver for solar energy, 11:31735 (J;US)
Status of the US; solar central receiver program, 11:31737 (J;US)
Operation
A solid particle central receiver for solar energy, 11:31735 (J;US)
Particles
Rapid heating of gas/small-particle mixture, 11:31734 (R;US)
Technology Assessment
Status of the US; solar central receiver program, 11:31737 (J;US)
Technology Transfer
Status of the US; solar central receiver program, 11:31737 (J;US)
CERAMIC MELTERS
Materials Testing
Evaluation of materials performance in a large-scale glass melter after two years of vitrifying simulated SRP defense waste, 11:31566 (BA;US)
CERAMICS
Activation Analysis
Intercomparison of the Asaro-Perlman and Brookhaven archaeological ceramic analytical standards, 11:32341 (J;CH)
Erosion
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
Fracture Properties
Brittle rupture and resistance to thermal shocks of structural ceramics, 11:32229 (R;FR;In French)
Nondestructive Testing
Needs assessment for nondestructive testing and materials characterization for improved reliability in structural ceramics for heat engines, 11:32476 (R;US)
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)
Self-radiation damage in actinide host phases of nuclear waste forms ($Ca_3Nd_6(SiO_4)_6O_3$; $Gd_2Ti_2O_7$; $CaZrTi_2O_7$), 11:32243 (BA;US)

Thermal Shock
Brittle rupture and resistance to thermal shocks of structural ceramics, 11:32229 (R;FR;In French)
Uses
Alloys in energy development, 11:32218 (J;CH)
CEREALS
See also MAIZE
Marketing
National conference on grain marketing patterns, 11:32842 (R;US)
Transport
National conference on grain marketing patterns, 11:32842 (R;US)
CERIUM COMPOUNDS
See also CERIUM SILICIDES
Fermi Level
Fermi surface of field-induced ferromagnetic CeSb, 11:32205 (J;US)
CERIUM SILICIDES
Neutron Diffraction
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
Spin Flip
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
Zeeman Effect
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
CERMETS
Erosion
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
CESIUM
Activation Analysis
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Adsorption
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Leaching
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Leaching of warm-pressed CsZP-cement composite waste forms, 11:32321 (BA;US)
Mass transfer in a geologic environment, 11:32301 (BA;US)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
CESIUM 130
Isotope Production
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1983, 11:32829 (R;US)
Radioisotope Generators
Nuclear medicine and imaging research. Quantitative studies in radiopharmaceutical science. Comprehensive progress report, January 1, 1983-June 30, 1985, 11:32830 (R;US)
CESIUM 131
Ion Exchange Chromatography
Production of Ba-131/Cs-131 for use in radiotherapy implants. Project 3, 11:32826 (RA;US)
Radiochemistry
Radiochemical studies using a 42 MeV cyclotron. Final report, September 1, 1983-February 28, 1986, 11:32825 (R;US)
CESIUM 134
Radiometric Analysis
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
CESIUM 137
Diffusion
Rubidium-strontium geochronologic systematics in igneous contact zones: analog for ^{90}Sr and ^{137}Cs behavior in the near field, 11:32872 (BA;US)
Leaching
Leachability of cement encapsulated West Valley radwaste streams, 11:32320 (BA;US)
Radiometric Analysis
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
CESIUM 143
Neutron Spectra
Delayed-neutron energy spectra of $^{89-97}Rb$ and $^{143-145}Cs$, 11:33146 (J;US)
CESIUM 144
Neutron Spectra
Delayed-neutron energy spectra of $^{89-97}Rb$ and $^{143-145}Cs$, 11:33146 (J;US)
CESIUM 145
Neutron Spectra
Delayed-neutron energy spectra of $^{89-97}Rb$ and $^{143-145}Cs$, 11:33146 (J;US)
CESIUM ALLOYS
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)
CESIUM PHOSPHATES
Leaching
Leaching of warm-pressed CsZP-cement composite waste forms, 11:32321 (BA;US)
CHALKS
See LIMESTONE
CHARCOAL
Sorptive Properties
In-use evaporative canister evaluation. Final report, December 1984-June 1985, 11:32148 (R;US)
CHARGED-PARTICLE ACTIVATION

Improved high-temperature percussion primer, 11:32684 (R;US)
Chemical Reactions
Chemical reaction of explosives and gun propellant during high acceleration, 11:32663 (RA;US)
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)
Detonation Limits
Supercritical fluid phase separations: Implications for detonation properties of condensed explosives, 11:32685 (J;US)
Detonations
Cavity collapse ignition of Composition B in the launch environment, 11:32679 (RA;US)
Composite explosives for metal acceleration: the effect of detonation temperature, 11:32666 (RA;US)
Continuous observation of Mach bridge and Mach phenomena, 11:32664 (RA;US)
DDT in RDX and ball powder: behavior of the porous bed, 11:32670 (RA;US)
Detonation reaction zone studies on TATB explosives, 11:32682 (RA;US)
Deuterium kinetic isotope effect: an experimental probe for the molecular processes governing the initiation of RDX, HMX, and TNT, 11:32676 (RA;US)
Dynamics of shock-induced energy flux in molecular bonds, 11:32667 (RA;US)
Eight-inch diameter, heavily confined card gap test, 11:32662 (RA;US)
Energetic response of propellants to high velocity impact, 11:32660 (RA;US)
Experimental investigation of the role of shear in initiation of detonation by impact, 11:32665 (RA;US)
Lagrange gage studies of detonation in some intermolecular EA based explosives, 11:32681 (RA;US)
Mechanical properties of PBX's and their behavior during drop weight impact, 11:32674 (RA;US)
Microwave interferometer techniques for detonation study, 11:32661 (RA;US)
Modeling short pulse duration shock initiation of solid explosives, 11:32669 (RA;US)
New approach for studying the expansion of detonation products, 11:32683 (RA;US)
Optical studies of chemical energy release during shock initiation of granular explosives, 11:32404 (R;US)
Paramagnetic resonance of radicals in decomposed trinitroaromatics, 11:32677 (RA;US)
Reaction rates from electromagnetic gauge data, 11:32680 (RA;US)
Role of shock and shear mechanisms in the initiation of detonation by fragment impact, 11:32678 (RA;US)
Simulation of the initiation of detonation in an energetic molecular crystal: the overdriven case, 11:32668 (RA;US)
Study of booster materials with electromagnetic particle velocity gauges, 11:32657 (RA;US)
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)
Supra-compression of LX-07, LX-17, PBX-9404, and RX-26-AF and the equations of state of the detonation products, 11:32672 (RA;US)
Theoretical equations of state for the detonation products of explosives, 11:32671 (RA;US)
Detonators
Electrostatic sensitivity, strength, and no-fire current of short-delay detonators. Report of Investigations/1985, 11:31354 (R;US)
Mechanical Properties
Mechanical properties of PBX's and their behavior during drop weight impact, 11:32674 (RA;US)
Pyrolysis
Deuterium kinetic isotope effect: an experimental probe for the molecular processes governing the initiation of RDX, HMX, and TNT, 11:32676 (RA;US)
Paramagnetic resonance of radicals in decomposed trinitroaromatics, 11:32677 (RA;US)
Reaction Kinetics
Reaction rates from electromagnetic gauge data, 11:32680 (RA;US)
Sensitivity
Improved high-temperature percussion primer, 11:32684 (R;US)

CHEMICAL LASERS
Raman Effect
Efficient stimulated Raman scattering due to absence of second Stokes growth, 11:32356 (J;US)
Scattering
Efficient stimulated Raman scattering due to absence of second Stokes growth, 11:32356 (J;US)
CHEMICAL REACTORS
Design
A molten salt reactor for dispersed solid phase chlorination, 11:31347 (B;US)
Fluid Injection
Power recovery system for coal liquefaction process, 11:31325 (P;US)
Fuel Feeding Systems
Power recovery system for coal liquefaction process, 11:31325 (P;US)
CHEMICAL SHIFT
Temperature Dependence
Carbon-14 NMR spectrum (68 MHz) of 2,6-dinitrophenol in CDCl3 and the temperature variation of the chemical shifts in reference to intramolecuar hydrogen bond, 11:32372 (J;JP)
CHEMICAL SPILLS
Air Pollution
Development of a fuel-spill/vapor-migration modeling system. Final report, October 1984-March 1985, 11:31403 (R;US)
CHEMICALS
See ADDITIVES
CARCINOGENS
CHELATING AGENTS
PIGMENTS
SURFACTANTS
CHEMISTRY
See also PHOTOCHEMISTRY
RADIATION CHEMISTRY
Research Programs
Chemical Technology Division annual technical report, 1985, 11:31965 (R;US)
CHERENKOV COUNTERS
Design
Study to measure νsub(μ)-e scattering with a water Cherenkov detector, 11:32592 (R;FR;In French)
CHERENKOV DETECTORS
See CHERENKOV COUNTERS
CHESAPEAKE BAY
Aquatic Ecosystems
Submerged aquatic vegetation of the Chesapeake Bay: past, present and future, 11:32774 (BA;US)
CHI RESONANCES
SU-2 Groups
Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study, 11:33074 (R;GB)
Temperature Dependence
Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study, 11:33074 (R;GB)
CHILE
Earthquakes
Structural observations of the March 3, 1985 Chilean earthquake, 11:32497 (RA;US)
CHINA
Solar Architecture
Passive solar in China: traditional and new, 11:31756 (R;US)
CHINESE BEAN OIL
See SOYBEAN OIL
CHINESE HAMSTER OVARY CELLS
See CHO CELLS
CHLORINE 34
Beta-Plus Decay
βi decays of ^{34}Ar, ^{34}Cl and ^{38}K, 11:33120 (RA;US)
CHLORINE 35 REACTIONS
Breakup Reactions
Projectile breakup into coincident heavy fragments, 11:33147 (RA;US)
CHLORINE COMPOUNDS
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)
CHLORINE IONS
Electron-Ion Collisions
Distorted-wave calculations of dielectronic recombination as a function of electric field strength, 11:32957 (J;US)
CHLOROPHYLL
Electron Transfer
^{25}Mg ENDOR and triple resonance in liquid solution of the bacteriochlorophyll a cation and anion radicals, 11:32354 (J;NL)
Structural Chemical Analysis
^{25}Mg ENDOR and triple resonance in liquid solution of the bacteriochlorophyll a cation and anion radicals, 11:32354 (J;NL)
CHO CELLS
DNA Repair
Defective DNA cross-link removal in Chinese hamster cell mutants hypersensitive to bifunctional alkylating agents, 11:32860 (J;US)
Radiosensitivity
Genetic complementation between UV-sensitive CHO mutants and xeroderma pigmentosum fibroblasts, 11:32852 (J;NL)
Strand Breaks
Defective DNA cross-link removal in Chinese hamster cell mutants hypersensitive to bifunctional alkylating agents, 11:32860 (J;US)
Survival Time
Genetic complementation between UV-sensitive CHO mutants and xeroderma pigmentosum fibroblasts, 11:32852 (J;NL)
CHONDRITES
Magnetic Properties
Magnetic properties of tetrataenite-rich meteorites. Pt. 2, 11:32907 (R;BR)
CHROMIUM
Catalytic Effects
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)
Crystallization
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Roughness
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Stability
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
CHROMIUM 52
Energy-Level Transitions
Study of excited-state GDR's in 1f-2p shell nuclei, 11:33127 (RA;US)
CHROMIUM ALLOYS
See also CHROMIUM STEELS
STAINLESS STEELS
Corrosion
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
Influence of temperature and lithium purity on corrosion of ferrous alloys in a flowing lithium environment, 11:32167 (R;US)
Heat Treatments
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy, 11:32164 (R;US)
Mechanical Properties
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy, 11:32164 (R;US)
Microstructure
Complementary AES and AEM of grain boundary regions in irradiated γ'-strengthened alloys, 11:32161 (R;US)
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy, 11:32162 (R;US)
Physical Radiation Effects
Complementary AES and AEM of grain boundary regions in irradiated γ'-strengthened alloys, 11:32161 (R;US)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)

Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy, 11:32162 (R;US)
Tensile Properties
Tensile behavior of helium-implanted and neutron-irradiated V-15Cr-5Ti, 11:32169 (R;US)
CHROMIUM STEELS
Ductile-Brittle Transitions
Saturation of the DBTT shift of irradiated 12Cr-1MoVW with increasing fluence, 11:32160 (R;US)
CHROMODYNAMICS
See QUANTUM CHROMODYNAMICS
CHRONIC RADIATION EFFECTS
See DELAYED RADIATION EFFECTS
CIRCUITS (ELECTRONIC)

CLASSICAL MECHANICS
Lie Groups
Classical dynamics and Lie groups, 11:33268 (J;US)
CLAYS
See also BENTONITE
Mass Transfer
Thermodynamically coupled mass transport processes in a saturated clay, 11:31595 (BA;US)
CLEAN WATER ACT
Prior to April 1980, FEDERAL WATER POLLUTION CONTROL ACT was used to index this concept.
Wetlands research plan, November 1985. Published report, 11:32791 (R;US)
CLIMATE MODELS
Modeling as a means of studying the climate system, 11:32699 (R;US)
Performance
Validation of General Circulation Model (GCM) control runs, 11:32700 (R;US)
CLIMATES
Forecasting
Is a rise in global temperature due to the increasing atmospheric CO_2 content predictable, 11:32691 (R;DE;In German)
Variations
Challenge of detecting climate change induced by increasing carbon dioxide, 11:32698 (R;US)
Modeling as a means of studying the climate system, 11:32699 (R;US)
CLINOPTILOLITE
Contraction
Effects of exchangeable cation composition on the thermal expansion/contraction of clinoptilolite (NNWSI project), 11:32326 (J;US)
Thermal Expansion
Effects of exchangeable cation composition on the thermal expansion/contraction of clinoptilolite (NNWSI project), 11:32326 (J;US)
CLOSTRIDIUM
Batch Culture
Defined starter culture for biomethanation of proteinaceous wastes, 11:31630 (RA;US)
CLUSTER MODEL
SU-3 Groups
Nuclear vibron model. I. The SU(3) limit, 11:33201 (J;US)
CO2 FLOODING
See CARBON DIOXIDE INJECTION
COAL
See also SUBBITUMINOUS COAL
Aging
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 11:31364 (R;US)
Alkylation
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)
Anisotropy
Fracture toughness testing of coal, 11:31338 (BA;US)
Ashes
Process for extraction of mineral values from low rank coals, 11:32098 (RA;US)
Calorific Value
Photothermal method of determining calorific properties of coal, 11:31337 (P;US)
Carbonization
Technique for upgrading of low-rank coals, 11:31358 (RA;US)
Chemical Composition
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 11:31364 (R;US)
Combustion
Coal Combustion and Utilization: a current awareness bulletin, 11:31369 (J;US)
Group combustion of coal particles. Quarterly progress report No. 2, December 15, 1985-March 15, 1986, 11:31368 (R;US)
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
Combustion Kinetics
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
Combustion Properties
Technique for upgrading of low-rank coals, 11:31358 (RA;US)
Combustors
Overview of DOE's advanced/MHD coal combustor development programs, 11:31370 (J;US)
Comparative Evaluations
Co-generation of electricity and synthetic liquids via hydropyrolysis of Alberta's subbituminous coals, 11:31305 (RA;US)
Deashing
Coal Cleaning Test Facility campaign report No. 3: Stockton-Lewiston seam coal, 11:31365 (R;US)
Desulfurization
Coal Cleaning Test Facility campaign report No. 3: Stockton-Lewiston seam coal, 11:31365 (R;US)
Microbial removal of organic sulfur from coal. Second quarterly report, January-March 1986, 11:31316 (R;US)
Surface and electrochemical studies in coal cleaning. Technical progress report, January 1, 1985-March 31, 1986, 11:31344 (R;US)
Devolatilization
Optimization of coal devolatilization model parameters for comprehensive gasification and combustion models, 11:31297 (R;US)
Drying
Production and combustion of hot-water dried low-rank coal slurries (Under pressure at temperature above 230°C), 11:31360 (RA;US)
Technique for upgrading of low-rank coals, 11:31358 (RA;US)
Thermal drying of low-rank coals using the fluid-bed method, 11:31361 (RA;US)
Energy Models
EFOM energy model: development of a tool to answer questions of energy supply, 11:32019 (R;XE)
Flotation
Coal Cleaning Test Facility: 1986 plan, 11:31366 (R;US)
Fracture Properties
Fracture toughness testing of coal, 11:31338 (BA;US)
Fuel Slurries
Environmental assessment of a watertube boiler firing a coal-water slurry. Volume 1. Technical results. Final report, January 1984-March 1985, 11:31346 (R;US)
Grinding
Preparation of super-clean coal. Effect of media size in stirred ball mill grinding. Technical progress report for the ninth and tenth quarters, September 15, 1985-March 14, 1986, 11:31362 (R;US)
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 11:31364 (R;US)
Hydrogenation
Co-generation of electricity and synthetic liquids via hydropyrolysis of Alberta's subbituminous coals, 11:31305 (RA;US)

Imports
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Market
Monthly energy review, January 1986, 11:32018 (R;US)
NMR Spectra
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)
Prices
Monthly energy review, January 1986, 11:32018 (R;US)
Pyrolysis
Co-generation of electricity and synthetic liquids via hydropyrolysis of Alberta's subbituminous coals, 11:31305 (RA;US)
Reduction
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)
Research Programs
Chemical Technology Division annual technical report, 1985, 11:31965 (R;US)
Sampling
Coal Cleaning Test Facility campaign report No. 3: Stockton-Lewiston seam coal, 11:31365 (R;US)
Staged Combustion
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
Supply and Demand
Annual Energy Review, 1985, 11:32028 (R;US)
Surface Coating
Technique for upgrading of low-rank coals, 11:31358 (RA;US)
Thermal Analysis
Photothermal method of determining calorific properties of coal, 11:31337 (P;US)
Water Removal
Coal Cleaning Test Facility: 1986 plan, 11:31366 (R;US)
Wettability
Program of basic research on the preparation and stability of coal/water slurries. Quarterly report, 11:31364 (R;US)
Yields
Technique for upgrading of low-rank coals, 11:31358 (RA;US)

COAL CHEMICALS
See COAL EXTRACTS

COAL DEPOSITS
See also COAL SEAMS
Exploration
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Gas Yields
Measuring formation pressures and the degree of gas drainage in a large coalbed gas-drainage field. Report of Investigations/1985, 11:31458 (R;US)
Geochemistry
Geological, geochemical and hydrological factors affecting the distribution of sodium in lignite in west-central North Dakota, 11:31350 (RA;US)
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
Geology
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Geological, geochemical and hydrological factors affecting the distribution of sodium in lignite in west-central North Dakota, 11:31350 (RA;US)
Longwall Mining
Determining face methane-liberation patterns during longwall mining. Information circular/1985, 11:31380 (R;US)

COAL EXTRACTS
Catalytic Cracking
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
Fractionation
Charring principal isolated from two American lignites, 11:31307 (RA;US)
Hydrogenation
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
Refining
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)

COAL FINES
Density
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Fractionation
Field-flow fractionation in the analysis of energy related materials. Progress report, August 1, 1979-January 31, 1983, 11:31333 (R;US)
Particle Size
Preparation of super-clean coal. Effect of media size in stirred ball mill grinding. Technical progress report for the ninth and tenth quarters, September 15, 1985-March 14, 1986, 11:31362 (R;US)
Separation Processes
Preliminary investigations into fine coal dense medium cyclone processing, 11:31355 (R;AU)
Water Removal
PED: Pressurized electroosmotic dewatering, 11:31348 (D;US)

COAL GASIFICATION
See also ARC COAL PROCESS
BI-GAS PROCESS
Ashes
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. First quarterly report, November 12, 1984-March 30, 1985, 11:31323 (R;US)
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. Second quarterly report, April 1-June 30, 1985, 11:31324 (R;US)
Chemical Reaction Kinetics
Small angle X-ray investigations of char structure during gasification, 11:31329 (B;US)
Coordinated Research Programs
Advanced gasification projects. Technology status report, 11:31301 (R;US)
Fluidized Beds
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Steam gasification of coal. Project prototype plant nuclear process heat. Final report, 11:31296 (R;DE;In German)
Fluidized-Bed Combustion
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. First quarterly report, November 12, 1984-March 30, 1985, 11:31323 (R;US)
Coal test program in a pressurized, fluidized-bed ash-agglomerating process development unit. Second quarterly report, April 1-June 30, 1985, 11:31324 (R;US)
Gas Generators
Gas generator research and development BI-GAS process. Final report for August 19, 1971-October 31, 1979. Vol. 1., 11:31319 (R;US)
Gas generator research and development BI-GAS process. Final report for August 19, 1971-October 31, 1979. Vol. 2., 11:31320 (R;US)
Pilot Plants
Steam gasification of coal. Project prototype plant nuclear process heat. Final report, 11:31296 (R;DE;In German)
Research Programs
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Extending the gasification program research and development/industrial dollar through joint government/industry funding, 11:31328 (J;US)
Steam
Steam gasification of coal. Project prototype plant nuclear process heat. Final report, 11:31296 (R;DE;In German)
Waste Water
Fixed-film, fluidized-bed bioreactors for biooxidation of coal conversion wastewaters. Progress report, October 1, 1984-September 30, 1985, 11:31321 (R;US)

COAL GASIFICATION PLANTS
By-Products
Estimates of the value of carbon dioxide from the Great Plains Coal Gasification Plant, 11:31374 (R;US)
Materials Testing
Comparison of results of 200- and 500-h exposures of silicon carbide to a slagging coal gasification environment, 11:31295 (R;US)
Solid Wastes
A molten salt reactor for dispersed solid phase chlorination, 11:31347 (B;US)
Waste Water
Mathematical modeling of emissions from cooling towers using coal gasification wastewater. Final report, November 1982-April 1985, 11:31322 (R;US)
COAL LIQUEFACTION
See also TSL PROCESS
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
Bench-Scale Experiments
Ambient temperature liquefaction using liquid clathrates. Second quarterly report, January 15-April 14, 1986, 11:31315 (R;US)
Catalysts
Coal liquefaction. Investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1986, 11:31309 (R;US)
Chemical Reactions
Low temperature aqueous alkaline liquefaction of Texas lignite, 11:31306 (RA;US)
Chemical Reactors
Coal liquefaction. Investigation of reactor performance, role of catalysts and PCT properties. Quarterly progress report, January 1-March 31, 1986, 11:31309 (R;US)
Chemistry
ChemCoal process for the chemical transformation of low rank coal, 11:31302 (RA;US)
Commercialization
US coal liquefaction program, 11:31326 (J;US)
Energy Efficiency
Power recovery system for coal liquefaction process, 11:31325 (P;US)
Measuring Instruments
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, January-March 1986, 11:31312 (R;US)
Organic Solvents
Coal liquefaction with supercritical ammonia and amines, 11:31330 (B;US)
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Use of non-coal-derived heavy solvents in direct liquefaction of Wyodak coal (Coprocessing with six heavy oils), 11:31308 (RA;US)
Program Management
US coal liquefaction program, 11:31326 (J;US)
Temperature Effects
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Yields
ChemCoal process for the chemical transformation of low rank coal, 11:31302 (RA;US)
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Wyodak coal: composition, reactions, and products. Final report (ChemCoal process), 11:31335 (R;US)
COAL LIQUEFACTION PLANTS
Financing
US coal liquefaction program, 11:31326 (J;US)
Government Policies
US coal liquefaction program, 11:31326 (J;US)
Materials Testing
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
COAL LIQUIDS
Chromatography
Lumping of chemical species in coal liquids using size exclusion chromatography-gas chromatography (SEC-GC) data, 11:31304 (RA;US)
Combustion Properties
Low-NOx staged gas turbine combustor concept for coal-water slurry application, 11:31371 (J;US)
Density
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Desulfurization
Short-residence=time coal liquefaction, 11:31331 (J;US)
Economics
Production and utilization of coal water fuels, 11:31327 (J;US)
Fractionation
Field-flow fractionation in the analysis of energy related materials. Progress report, August 1, 1979-January 31, 1983, 11:31333 (R;US)
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983, 11:31332 (R;US)
Gas Chromatography
Lumping of chemical species in coal liquids using size exclusion chromatography-gas chromatography (SEC-GC) data, 11:31304 (RA;US)
Hydrogenation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Phase Studies
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Purification
Short-residence=time coal liquefaction, 11:31331 (J;US)
Research Programs
Status report on DOE's coal-water mixtures program, 11:32112 (J;US)
Solvent Properties
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Thermodynamic Properties
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Toxicity
Developmental toxicity following oral administration of a high-boiling coal liquid to pregnant rats, 11:31384 (J;GB)
Zooplankton community responses to synthetic oil exposure, 11:31349 (R;US)
COAL MINES
Dusts
Electrical-ignition energies and thermal autoignition temperatures for evaluating explosion hazards of dusts. Report of Investigations/1985, 11:31379 (R;US)
Explosions
Electrical-ignition energies and thermal autoignition temperatures for evaluating explosion hazards of dusts. Report of Investigations/1985, 11:31379 (R;US)
Mining Equipment
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Planning
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Start-Up
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)

Ventilation
Exhaust ventilation of deep cuts using a continuous-mining machine. Report of Investigations/1985, 11:31378 (R;US)

COAL MINING
Chemical Explosives
Electrostatic sensitivity, strength, and no-fire current of short-delay detonators. Report of Investigations/1985, 11:31354 (R;US)
Injuries
Coal mine injury and employment experience by occupation, 1976-1980. Informational report, 11:31382 (R;US)
Injury experience in coal mining, 1983. Informational report, 11:31383 (R;US)
Longwall Mining
Methane control on longwalls with cross-measure boreholes (Lower Kittanning Coalbed). Report of investigations/1985, 11:31381 (R;US)
Occupational Diseases
Injury experience in coal mining, 1983. Informational report, 11:31383 (R;US)
Underground Mining
Exhaust ventilation of deep cuts using a continuous-mining machine. Report of Investigations/1985, 11:31378 (R;US)
Reducing hazards in underground coal mines through the recognition and delineation of coalbed discontinuities caused by ancient channel processes. Report of Investigations/1985, 11:31377 (R;US)

COAL PREPARATION
See also HEAVY MEDIA SEPARATION
Computer economics of physical coal cleaning and flue gas desulfurization. Final report. Report for October 1979-June 1983, 11:31783 (R;US)
Surface and electrochemical studies in coal cleaning. Technical progress report, January 1, 1985-March 31, 1986, 11:31344 (R;US)
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
Drying
Beneficiation processes for ultrafinely ground low rank coals, 11:31359 (RA;US)
Grinding
Beneficiation processes for ultrafinely ground low rank coals, 11:31359 (RA;US)
Test Facilities
Coal Cleaning Test Facility: 1986 plan (Homer City, PA), 11:31366 (R;US)
Coal Cleaning Test Facility campaign report No. 3: Stockton-Lewiston seam coal, 11:31365 (R;US)

COAL SEAMS
Degassing
Coalbed methane. Technology status report, 11:31353 (R;US)
Fracture toughness testing of coal, 11:31338 (BA;US)
Overview: coalbed methane, 11:31441 (RA;US)
Explosive Fracturing
Fracture toughness testing of coal, 11:31338 (BA;US)
Hydraulic Fracturing
Demonstration of hydraulic fracturing stress measurement techniques, 11:31352 (R;AU)
Fracture toughness testing of coal, 11:31338 (BA;US)

COAL TAR
Catalytic Cracking
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Mutagen Screening
Isolation of a highly mutagenic aminophenanthrene from a coal gasification process tar, 11:32857 (J;US)
Removal
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)

COAL-DERIVED LIQUIDS
See COAL LIQUIDS

COAL-FIRED GAS TURBINES
Previous to February 1980 this concept was indexed to GAS TURBINES.
Energy Efficiency
Low-NOx staged gas turbine combustor concept for coal-water slurry application, 11:31371 (J;US)
Performance Testing
Low-NOx staged gas turbine combustor concept for coal-water slurry application, 11:31371 (J;US)

COAL-OIL MIXTURES
See COAL
FUEL OILS
FUEL SLURRIES

COATED FUEL PARTICLES
Fabrication
Method to produce large, uniform hollow spherical shells, 11:33412 (P;US)

COATING PROCESSES
See SURFACE COATING

COATING (SURFACE)
See SURFACE COATING

COATINGS
Failures
Mechanisms of failure of coatings used in flue gas desulfurization systems, 11:32178 (R;US)
Performance Testing
Mechanisms of failure of coatings used in flue gas desulfurization systems, 11:32178 (R;US)

COBALT
Catalytic Effects
Fischer-Tropsch synthesis of hydrocarbons in the gasoil range. Final report, 11:31650 (R;DE)
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Crystallization
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Excitation
Temperature determinations in the inductively coupled plasma using a Fourier transform spectrometer, 11:32360 (J;GB)
Roughness
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Stability
Stability of multilayers for synchrotron optics, 11:32203 (J;US)

COBALT 59 TARGET
Alpha Reactions
Statistical GDR decays over a wide range of energy from the $^{63}Cu^{*}$ compound nucleus, 11:33134 (RA;US)
Heavy Ion Reactions
Electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au targets by relativistic heavy ions to $Z = 26$, 11:33136 (J;US)

COBALT 60
Adsorption
A laboratory and field evaluation of the mobility of cobalt-60/EDTA, 11:31576 (BA;US)
Leaching
A laboratory and field evaluation of the mobility of cobalt-60/EDTA, 11:31576 (BA;US)
Radiometric Analysis
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
Underground Disposal
A laboratory and field evaluation of the mobility of cobalt-60/EDTA, 11:31576 (BA;US)

COBALT ALLOYS
See also INCONEL 617
Erosion
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)

COBALT COMPLEXES
Dissociation
A laboratory and field evaluation of the mobility of cobalt-60/EDTA, 11:31576 (BA;US)
COBALT IONS
Absorption Spectra
Transition metal ions in silicate melts. IV. Cobalt in sodium silicate and related glasses, 11:32276 (J;US)
COBALT OXIDES
Catalytic Effects
Improved catalysts for liquid hydrocarbon fuels from syngas. Fifth quarterly technical progress report, October-December 1985, 11:31649 (R;US)
COGENERATION
Prior to November 1980, this concept was indexed to CO-GENERATION.
See COGENERATION
Economic Analysis
Economic-screening guidebook for cogeneration in buildings. Report for January 1983-November 1985, 11:32073 (R;US)
Feasibility Studies
Evaluation of dual energy use systems (DEUS); distillation applications. Volume 2. Utility handbook. Final report, 11:32106 (R;US)
U.S. cities checking cogeneration potential for district heating, cooling, 11:32004 (J;US)
Financing
Financial and regulatory issues of packaged cogeneration, 11:31434 (J;US)
Regional Analysis
Economic-screening guidebook for cogeneration in buildings. Report for January 1983-November 1985, 11:32073 (R;US)
Regulations
Financial and regulatory issues of packaged cogeneration, 11:31434 (J;US)
COGENERATION PLANTS
See DUAL-PURPOSE POWER PLANTS
COILS (MAGNETIC)
See MAGNET COILS
COKE
Yields
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
COKE OVENS
Materials Testing
Mathematical model for the determination of thermal spalling in refractory material on basis of the practical relationship of the appearance of rupture, physical properties and physical conditions, 11:31317 (R;XE)
COLD PLASMA
Instability Growth Rates
Bounds on instability growth rates for cold plasmas streaming along an infinite magnetic guide field, 11:33383 (J;US)
Two-Stream Instability
Bounds on instability growth rates for cold plasmas streaming along an infinite magnetic guide field, 11:33383 (J;US)
COLLECTIVE ACCELERATORS
Plasma Waves
Two-dimensional beat wave acceleration simulation, 11:33390 (BA;US)
COLLECTOR PROPERTIES
See PERMEABILITY
COLLECTOR PROPERTIES (ROCKS)
See PERMEABILITY
COLLEGES
See EDUCATIONAL FACILITIES
COLLIERIES
See COAL MINES
COLLISIONAL PLASMA
Absolute Instabilities
Nonlinear saturation of the absolute stimulated Raman scattering instability in a finite collisional plasma, 11:33324 (J;US)
Dispersion Relations
Semicollisional drift-tearing modes in toroidal plasmas, 11:33321 (J;US)
Drift Instability
Statistical properties and correlation functions for drift waves, 11:33332 (J;US)
Fluctuations
Statistical properties and correlation functions for drift waves, 11:33332 (J;US)
Nonlinear Problems
Nonlinear saturation of the absolute stimulated Raman scattering instability in a finite collisional plasma, 11:33324 (J;US)
Statistical properties and correlation functions for drift waves, 11:33332 (J;US)
Raman Effect
Nonlinear saturation of the absolute stimulated Raman scattering instability in a finite collisional plasma, 11:33324 (J;US)
Tearing Instability
Semicollisional drift-tearing modes in toroidal plasmas, 11:33321 (J;US)
Turbulence
Statistical properties and correlation functions for drift waves, 11:33332 (J;US)
COLLISIONLESS PLASMA
Antennas
Fast wave current drive, 11:33360 (J;US)
Current-Drive Heating
Fast wave current drive, 11:33360 (J;US)
Dispersion Relations
Finite-Larmor-radius dispersion functional for the Vlasov-fluid model, 11:33328 (J;US)
Drift Instability
Institute for fusion studies. Progress report, September 1, 1984-August 31, 1985, 11:33293 (R;US)
Electric Fields
Consequences of time-reversal symmetry for the electric field scaling of transport in stellarators, 11:33337 (J;US)
Scaling Laws
Consequences of time-reversal symmetry for the electric field scaling of transport in stellarators, 11:33337 (J;US)
Tearing Instability
Institute for fusion studies. Progress report, September 1, 1984-August 31, 1985, 11:33293 (R;US)
COLOGNE SPIRITS
See ETHANOL
COLOMBIA
Energy Policy
Colombia - energy situation 1984, 11:32013 (R;DE;In German)
Energy Supplies
Colombia - energy situation 1984, 11:32013 (R;DE;In German)
COLOR MODEL
Feynman Path Integral
Non-Abelian Aharonov-Bohm effect in the framework of Feynman pseudo-classical path integrals, 11:32999 (R;BR)
COLORADO
Geochemical Surveys
R-mode factor analysis applied to uranium exploration in the Montrose quadrangle, Colorado, 11:31472 (J;NL)
Geology
Geologic characterization of tight gas reservoirs, Piceance Basin, 11:31423 (RA;US)
Natural Gas Deposits
Comprehensive well testing and modeling of pre- and post-fracture well performance of the MWX lenticular tight gas sands, 11:31428 (BA;US)
Crosswell acoustic imaging project, 11:31426 (RA;US)
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)
Geologic characterization of tight gas reservoirs, Piceance Basin, 11:31423 (RA;US)
In-situ physical properties using crosswell acoustic data, 11:31429 (BA;US)
Multiwell Experiment site geology, 11:31424 (RA;US)
Multiwell experiment, 11:31453 (RA;US)
Multiwell fracturing experiments, 11:31454 (RA;US)
MWX reservoir engineering (Multiwell Experiment), 11:31456 (RA;US)

Predictions of size and orientations of Lenticular reservoirs in the Mesaverde group, Northwestern Colorado, 11:31427 (BA;US)
Rock matrix and fracture analysis of flow in western tight gas sands, 11:31425 (RA;US)
Natural Gas Wells
Multiwell experiment, 11:31453 (RA;US)
Multiwell fracturing experiments, 11:31454 (RA;US)
MWX reservoir engineering (Multiwell Experiment), 11:31456 (RA;US)
Western gas sands systems analysis, 11:31449 (RA;US)
Oil Shale Deposits
DOE Oil Shale Reference Sample Bank. Quarterly reports, October-December 1985; January-March 1986, 11:31465 (R;US)

COLUMBIA RIVER
Contamination
Dispersion of dissolved material in the Columbia River, 11:31583 (R;US)

COLUMBIUM
See NIOBIUM

COLUMNS (MECHANICAL)
See MECHANICAL STRUCTURES

COMBINED GAS AND STEAM CYCLE POWER PLANTS
See COMBINED-CYCLE POWER PLANTS

COMBINED STEAM-POWER GENERATION
See COGENERATION

COMBINED-CYCLE POWER PLANTS
Prior to March, 1976, the descriptors COMBINED CYCLES and FOSSIL-FUEL POWER PLANTS or THERMAL POWER PLANTS were used for indexing this concept.
Feasibility Studies
Evaluation of dual energy use systems (DEUS); distillation applications. Volume 2. Utility handbook. Final report, 11:32106 (R;US)
Gas Turbines
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)

COMBUSTION
See also STAGED COMBUSTION
Additives
Combustion of calcium treated coals, 11:31373 (B;US)
Bibliographies
Coal Combustion and Utilization: a current awareness bulletin, 11:31369 (J;US)
Detonations
Transition to detonation in a model problem, 11:32397 (R;US)
Flame Propagation
Structure of counterflow diffusion flames burning multicomponent fuels, 11:32396 (R;US)
Information
Coal Combustion and Utilization: a current awareness bulletin, 11:31369 (J;US)
Mathematical Models
Group combustion of coal particles. Quarterly progress report No. 2, December 15, 1985-March 15, 1986 (Group combustion surrounded by a sheath vs particulate combustion), 11:31368 (R;US)
Pulse Techniques
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
Sprays
Measurements and designs related to electrical spray modification in a T-56 combustor. Contractor report, August 1984-September 1985, 11:32516 (R;US)

COMBUSTION KINETICS
Numerical Analysis
Numerical analysis of SSME preburner injector atomization and combustion processes, 11:32400 (BA;US)

COMBUSTION PRODUCTS
Air Pollution Abatement
In-use evaporative canister evaluation. Final report, December 1984-June 1985, 11:32148 (R;US)

COMBUSTORS
Design
Gas turbine component screening program: fuel flexible combustor, 11:31776 (R;US)
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
Flow Models
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
One-Dimensional Calculations
Slagging retrofit pulsed coal combustor. Quarterly progress report, January-March 1986, 11:31367 (R;US)
Research Programs
Combustion equipment research, 11:32520 (J;US)
Overview of DOE's advanced/MHD coal combustor development programs, 11:31370 (J;US)
Sprays
Measurements and designs related to electrical spray modification in a T-56 combustor. Contractor report, August 1984-September 1985, 11:32516 (R;US)
Technology Transfer
Overview of DOE's advanced/MHD coal combustor development programs, 11:31370 (J;US)

COMMERCIAL BUILDINGS
See also RESTAURANTS
Air Source Heat Pumps
Double effect absorption heat pump. Phase 2 and 2A. Final report, October 1982-May 1984, 11:32076 (R;US)
DEUS
Dual energy use for industrial, commerical, and building applications, 11:32088 (B;US)
Energy Consumption
Commercial-sector energy use in Christchurch. Final report, 11:32075 (R;US)
Passive Solar Cooling Systems
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
Passive Solar Heating Systems
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
Water Heaters
High-efficiency commercial water-heater development. Supplemental technical report, August 1984-August 1985, 11:32077 (R;US)

COMMERCIAL SECTOR
Energy Consumption
Energy use in the service sector: an international perspective, 11:32029 (RA;US)
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)
Energy Models
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)
Fuels
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)

COMPACT TORUS
Prior to October 1982, this concept was indexed to THERMONUCLEAR DEVICES or to a particular experiment if known, e.g., REVERSE-FIELD PINCH.
Plasma Heating
Negative ion beam requirements for compact tori, 11:33454 (J;US)
Start-Up
Negative ion beam requirements for compact tori, 11:33454 (J;US)

COMPLEX TERRAIN
Meteorology
Comparisons of meteorological and structure parameters in complex terrain, 11:32701 (R;US)

COMPLEXING AGENTS
See CHELATING AGENTS

COMPOSITE MATERIALS
See also CERMETS
SUPERCONDUCTING COMPOSITES
Filler Metals
Plasma joining of metal-matrix composites. Interin report, October-November 1985, 11:32244 (R;US)

Plasma Arc Welding
Plasma joining of metal-matrix composites. Interin report, October-November 1985, 11:32244 (R;US)

COMPOUND-NUCLEUS REACTIONS
Carbon 13 Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)

COMPOUNDS (ORGANIC)
See ORGANIC COMPOUNDS

COMPRESSED GASES
Sampling
Sampling manifold for gas analysis. Final report, 11:32413 (R;US)

COMPRESSORS
Flow Models
Research on turbine flowfield analysis methods. Final report, 1 April 1983-30 November 1984, 11:32462 (R;US)

COMPTON EFFECT
Cross Sections
A simple method for computing the relativistic Compton scattering kernel for radiative transfer, 11:33026 (J;US)
Klein-Nishina Formula
A simple method for computing the relativistic Compton scattering kernel for radiative transfer, 11:33026 (J;US)

COMPTON SCATTERING
See COMPTON EFFECT

COMPTON SCATTERING TOMOGRAPHY
Tomography based on the detection by a gamma camera of the 90° Compton scattering of a planar gamma beam produced by an external source.
Design
Proposal for a new tomographic device providing information on the chemical properties of a body section, 11:32817 (R;US)

COMPUTER CALCULATIONS
Methods, not results.
Optimization
Acceleration of the nodal program FERM, 11:33470 (R;BR;In Portuguese)
Validation
Verification of NAMMU using HYDROCOIN, 11:31493 (R;GB)

COMPUTER CODES
Computer codes are indexed by their initial letter and CODES, e.g., A CODES. If the code name begins with a number the code is indexed to NUMBER CODES.
See also H CODES
R CODES
T CODES
X CODES
A Codes
Analysis of some anticipated transients without scram for a pressurized water cooled reactor (PWR) using coupling of the containment code CORAN to the system model code ALMOD, 11:31810 (R;BR;In Portuguese)
Temperature distribution due to the heat generation in nuclear reactor shielding (Computer calculations using ANISN- and DOT 3.5 - computer codes), 11:31870 (R;BR;In Portuguese)
B Codes
BRA: A Breast Radiation Analysis program, 11:32834 (R;ZA)
C Codes
Analysis of some anticipated transients without scram for a pressurized water cooled reactor (PWR) using coupling of the containment code CORAN to the system model code ALMOD, 11:31810 (R;BR;In Portuguese)
Development of a calculation method for one dimensional kinetic analysis in fission reactors, with feedback effects (WIGLE3 - computer code and CITER 1D - computer code), 11:31866 (R;BR;In Portuguese)
Tornado risk analysis at Savannah River Plant using windspeed damage thresholds and single building strike frequencies, 11:32506 (RA;US)
D Codes
Continuous-l optical model program, 11:33179 (RA;US)
Temperature distribution due to the heat generation in nuclear reactor shielding (Computer calculations using ANISN- and DOT 3.5 - computer codes), 11:31870 (R;BR;In Portuguese)
Design
User systems guidelines for software projects, 11:33483 (R;US)
Documentation
Guidelines for computer software development in Directorate 1500, 11:33480 (R;US)
User systems guidelines for software projects, 11:33483 (R;US)
E Codes
Extension of the EQ3/6 computer codes to geochemical modeling of brines, 11:32902 (BA;US)
F Codes
A 1-D hybrid code for FRM dynamics, 11:33453 (BA;US)
A computer analysis of wind turbine blade dynamic loads, 11:31774 (J;US)
Acceleration of the nodal program FERM, 11:33470 (R;BR;In Portuguese)
An improved model for fluid-driven cracks in jointed rock, 11:31459 (BA;US)
FIRAC User's Manual: a Computer code to simulate fire accidents in nuclear facilities, 11:31606 (R;US)
H Codes
Evaluation of XSDRN code for PWR cross-section generation, 11:31828 (R;BR;In Portuguese)
Study of reliability of HAMMER-TECHNION code to calculate control rod worth in PWR's, 11:31829 (R;BR;In Portuguese)
Verification of NAMMU using HYDROCOIN, 11:31493 (R;GB)
M Codes
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
Natural convection experiments about a finite-length cylindrical heat source in a liquid-saturated porous medium, 11:31548 (B;US)
Management
User systems guidelines for software projects, 11:33483 (R;US)
Manuals
ENEA version of the lagrangian code ASTARTE-4 later developments and user's manual modifications, 11:31863 (R;IT)
User systems guidelines for software projects, 11:33483 (R;US)
N Codes
Verification of NAMMU using HYDROCOIN, 11:31493 (R;GB)
O Codes
ORMEC: A three-dimensional MHD spectral inverse equilibrium code, 11:32975 (J;US)
P Codes
PLOT 3D: a multipurpose, interactive program for plotting three dimensional graphs, 11:33463 (R;IN)
PRESTO-II: a low-level waste environmental transport and risk assessment code, 11:32761 (R;US)
Quality Control
Guidelines for computer software development in Directorate 1500, 11:33480 (R;US)
R Codes
Comprehensive Test Ban Treaty seismic verification decision analysis computer model. Volume 2, 11:32689 (R;US)
T Codes
Application of TEMPPC code to the IEA-R1 nuclear reactor core hydrothermal calculations operating at 2 MW for determining the minimal coolant flow, 11:31882 (R;BR;In Portuguese)
Testing
User systems guidelines for software projects, 11:33483 (R;US)
U Codes
Far field migration of radionuclides in two dimensional ground water flows though geologic media (UCBNE21-computer code), 11:31585 (R;BR)
V Codes
Implicit moment electromagnetic plasma simulation in cylindrical coordinates, 11:33339 (J;US)
W Codes
Development of a calculation method for one dimensional kinetic analysis in fission reactors, with feedback effects

(WIGLE3 - computer code and CITER 1D - computer code), 11:31866 (R;BR;In Portuguese)
X Codes
Evaluation of XSDRN code for PWR cross-section generation, 11:31828 (R;BR;In Portuguese)
COMPUTER GRAPHICS
Text and graphics at Los Alamos: a system viewpoint, 11:33472 (R;US)
G Codes
GRAPH III: a digitizing and graph plotting program, 11:33481 (R;US)
COMPUTER NETWORKS
Communicating with the IBM-PC on the Xerox Ethernet local area network, 11:33478 (R;US)
Installation
Study for establishment of the Rio Grande Communications Network connecting federal, state and private facilities in New Mexico, 11:33466 (R;US)
Management
Study for establishment of the Rio Grande Communications Network connecting federal, state and private facilities in New Mexico, 11:33466 (R;US)

TANKS
Corrosion
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Design
Design of a nuclear waste package for emplacement in tuff, 11:31579 (BA;US)
Evaluation
Testing and evaluation of used UF_6 shipping packages (Type 30B cylinders), 11:32420 (R;US)
Hydrogen Embrittlement
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Performance
Feasibility study using hypothesis testing to demonstrate containment of radionuclides within waste packages, 11:31495 (R;US)
Performance Testing
Testing and evaluation of used UF_6 shipping packages (Type 30B cylinders), 11:32420 (R;US)
Temperature Gradients
Effect of radial temperature gradients on glass fracture in simulated high-level waste canisters, 11:32317 (BA;US)
CONTAINMENT BUILDINGS
Stress Analysis
Reliability assessment and probability based design of reinforced concrete containments and shear walls, 11:31945 (R;US)
CONTAINMENT SYSTEMS
Design
Tertiary containment in a multi-room tritium facility, 11:33418 (J;US)
Valves
Venting of noncondensible gas from the upper head of a B and W reactor vessel using hot leg U-bend vent valves, 11:31954 (R;US)
CONTAMINATION (INTERNAL)
See RADIONUCLIDE KINETICS
CONTENT ANALYSIS
See CHEMICAL ANALYSIS
CONTINENTAL SHELF
Land Use
Constraints to leasing and development of federal resources: OCS oil and gas and geothermal. Final report, 11:31764 (R;US)
CONTINUOUS MINERS
Exhaust Gases
Exhaust ventilation of deep cuts using a continuous-mining machine. Report of Investigations/1985, 11:31378 (R;US)
CONTROL EQUIPMENT
Design
Eastern gas shales reservoir tester instrumentation development, 11:31432 (RA;US)

Economics
Lighting control equipment and applications, 11:32081 (J;US)
Technology Utilization
Lighting control equipment and applications, 11:32081 (J;US)

CONTROL (INSPECTION)
See INSPECTION

CONTROL (RADIOACTIVITY)
See RADIATION MONITORING

CONTROL SYSTEMS
For automated processes including feedback.
Computer-Aided Design
Comments on achievable eigenvectors, 11:33467 (R;US)
Eigenvectors
Comments on achievable eigenvectors, 11:33467 (R;US)

CONTROL THEORY (REACTOR)
See REACTOR KINETICS

COOKING
See FOOD PROCESSING

COOLANTS
See also specific coolant materials.
Flow Rate
Application of TEMPPC code to the IEA-R1 nuclear reactor core hydrothermal calculations operating at 2 MW for determining the minimal coolant flow, 11:31882 (R;BR;In Portuguese)

COOLERS
See HEAT EXCHANGERS

COOLING SYSTEM (REACTOR)
See REACTOR COOLING SYSTEMS

COOLING SYSTEMS
See also REACTOR COOLING SYSTEMS
Corrosion Inhibitors
Corrosion inhibitors for carbon steel surfaces in contact with fresh water, 11:31614 (R;IN)
Test Facilities
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)

COOLING TOWERS
Energy Consumption
Microcomputer program of crossflow cooling tower performance, 11:32096 (RA;US)
Environmental Impacts
Cooling tower drift study at the Oak Ridge Gaseous Diffusion Plant, 11:31989 (R;US)
Heat Transfer
Microcomputer program of crossflow cooling tower performance, 11:32096 (RA;US)
Mass Transfer
Microcomputer program of crossflow cooling tower performance, 11:32096 (RA;US)
Water Pollution Abatement
Mathematical modeling of emissions from cooling towers using coal gasification wastewater. Final report, November 1982-April 1985, 11:31322 (R;US)

COPPER
Alpha Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Argon 40 Reactions
Radiochemical studies of unusual projectile fragments, 11:33131 (RA;US)
Band Theory
Intensity oscillations in the inverse photoemission cross section of an unoccupied surface state on Cu(001), 11:32208 (J;US)
Carbon 12 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Catalytic Effects
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Dimers
UV laser excited fluorescence spectroscopy of the jet-cooled copper dimer, 11:32946 (J;US)
Dislocations
Collapse of defect cascades to dislocation loops, 11:32166 (R;US)
Ecological Concentration
Survey of copper in Kings Bay and Cumberland Sound. Final report, 15-23 January 1985, 11:32775 (R;US)
Electron Collisions
Intensity oscillations in the inverse photoemission cross section of an unoccupied surface state on Cu(001), 11:32208 (J;US)
Electron-Atom Collisions
Monokinetic electron backscattering from amorphous or polycrystalline specimens, 11:32934 (R;FR;In French)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Environmental Transport
Survey of copper in Kings Bay and Cumberland Sound. Final report, 15-23 January 1985, 11:32775 (R;US)
Fluorescence
UV laser excited fluorescence spectroscopy of the jet-cooled copper dimer, 11:32946 (J;US)
Molecular Structure
UV laser excited fluorescence spectroscopy of the jet-cooled copper dimer, 11:32946 (J;US)
Oxygen 16 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Photon Emission
Intensity oscillations in the inverse photoemission cross section of an unoccupied surface state on Cu(001), 11:32208 (J;US)
Physical Radiation Effects
Calculated radiation damage effects of high energy proton beams, 11:32175 (R;CH)
Nucleation model for vacancy complexes in damage cascade area, 11:32181 (R;SU;In Russian)
Vacancy spatial redistribution in damage cascade area at stage of thermal peak, 11:33216 (R;SU;In Russian)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)

COPPER 63
Energy-Level Transitions
Statistical GDR decays over a wide range of energy from the $^{63}Cu^{*}$ compound nucleus, 11:33134 (RA;US)

COPPER ALLOYS
See also COPPER BASE ALLOYS
Dislocations
Collapse of defect cascades to dislocation loops, 11:32166 (R;US)
Erosion
Recent results on the preparation and properties of Li-containing Cu alloys, 11:33397 (R;US)
Sputtering
Recent results on the preparation and properties of Li-containing Cu alloys, 11:33397 (R;US)

COPPER BASE ALLOYS
See also BRASS
BRONZE
MUNTZ METAL
Cathodic Protection
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)

COPPER SELENIDE SOLAR CELLS
Fabrication
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)
Health Hazards
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)

COPPER SILICIDES
Neutron Diffraction
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
Spin Flip
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
Zeeman Effect
Polarized neutron scattering from $CeCu_2Si_2$ in applied magnetic fields, 11:32272 (J;US)
COPPER VAPOR LASERS
See GAS LASERS
CORES (REACTOR)
See REACTOR CORES
CORN (MAIZE)
See MAIZE
CORN STOVER
See MAIZE
CORROSION RESISTANT ALLOYS
See also STAINLESS STEELS
High-pressure distillation of crude $ZrCl_4$. Open File report, 11:32339 (R;US)
COSMIC GAMMA SOURCES
Gamma Spectra
Gamma-ray lines from SS433, 11:32912 (RA;US)
COSMIC PARTICLES
See COSMIC RADIATION
COSMIC RADIATION
From sources other than the sun; not for SOLAR RADIATION.
See also PRIMARY COSMIC RADIATION
Cross Sections
Exact solution of the nucleons diffusion equation with increase inelastic cross section, 11:32911 (R;BR;In Portuguese)
Diffusion
Exact solution of the nucleons diffusion equation with increase inelastic cross section, 11:32911 (R;BR;In Portuguese)
COSMIC RAY SOURCES
See also COSMIC GAMMA SOURCES
Isotope Ratio
Implications of new measurements of O-16 + p + C-12,13, N-14,15 for the abundances of C, N isotopes at the cosmic ray source, 11:32918 (RA;US)
COSMOLOGICAL MODELS
Inflation
No hair theorem for inhomogeneous cosmologies, 11:32915 (R;US)
Space-Time
Weyl (integrable) spacetimes as a model for our cosmos, 11:32908 (R;BR)
COTTONSEED OIL
Processing
Solvent extraction: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32722 (R;US)
COUNTERFLOW COOLING TOWERS
See COOLING TOWERS
COUNTERS (RADIATION)
See RADIATION DETECTORS
COUNTY BUILDINGS
See PUBLIC BUILDINGS
COUPLED CHANNEL THEORY
Random Phase Approximation
On an effective method for solution of a strong channel coupling problem, 11:33182 (R;SU;In Russian)
Strong-Coupling Model
On an effective method for solution of a strong channel coupling problem, 11:33182 (R;SU;In Russian)
COURT BUILDINGS
See PUBLIC BUILDINGS
COVERINGS
Design
Designing surface covers: an approach to long-term waste site stabilization, 11:31575 (BA;US)
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
COW-MILKERS
See RADIOISOTOPE GENERATORS
CRACK GROWTH
See CRACK PROPAGATION
CRACK PROPAGATION
Criteria for unstable crack extension under displacement control, 11:32511 (R;DE;In German)
CRATERS
Blast Effects
Blast induced subsidence in the craters of nuclear tests over coral, 11:32686 (BA;US)
Ground Subsidence
Blast induced subsidence in the craters of nuclear tests over coral, 11:32686 (BA;US)
Shape
Blast induced subsidence in the craters of nuclear tests over coral, 11:32686 (BA;US)
Size
Blast induced subsidence in the craters of nuclear tests over coral, 11:32686 (BA;US)
CRAY COMPUTERS
Performance Testing
Numeric experiments on the Cray X-MP/48, 11:33464 (R;FR;In French)
CREEKS
See STREAMS
CRITICAL CURRENT
Analytical Solution
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
CRITICAL FLOW
Research Programs
Critical flow of subcooled liquid and jet forces, 11:31898 (R;IT)
CRITICAL HEAT FLUX
Assessment of post-critical-heat flux models with Lehigh nonequilibrium data, 11:31950 (R;US)
Data Base Management
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part I. A review of fundamentals of CHF and related data base, 11:33450 (J;US)
Reviews
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part I. A review of fundamentals of CHF and related data base, 11:33450 (J;US)
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part II. A review of microconvective, experimental, and correlational aspects, 11:33451 (J;US)
CRITICALITY ACCIDENTS
See RADIATION ACCIDENTS
CROPS
Gasification
Energy from biological processes. Vol. I, 11:31652 (R;US)
Marketing
National conference on grain marketing patterns, 11:32842 (R;US)
Transport
National conference on grain marketing patterns, 11:32842 (R;US)
CROSSFLOW COOLING TOWERS
See COOLING TOWERS
CROSSFLOW SYSTEMS
CROSSFLOW SYSTEMS
Instability
Instability characteristics of fluidelastic instability of tube rows in crossflow, 11:31841 (R;US)
Testing
Instability characteristics of fluidelastic instability of tube rows in crossflow, 11:31841 (R;US)
CROSS-LINKING
Computerized Simulation
Fundamental studies of elastomers. Annual progress report, June 15, 1985-March 21, 1986, 11:32247 (R;US)
CRUDE OIL
See PETROLEUM

CRUSTACEANS
Baseline Ecology
Partitioning of macroinvertebrates in leaf packs by functional group. Appendix XI, 11:32770 (R;US)
CRYSTAL STRUCTURE
X-Ray Diffraction
Position-resolving x-ray diffractometry, 11:32227 (TG;US)
CRYSTALLINE ROCKS
See IGNEOUS ROCKS
CRYSTALS
See also DENDRITES
MOLECULAR CRYSTALS
MONOCRYSTALS
Ion Channeling
Rainbow effect in ion channeling, 11:33226 (J;US)
Melting
Thermodynamic properties of a three-dimensional defect system, 11:33242 (J;US)
Physical Radiation Effects
Vacancy spatial redistribution in damage cascade area at stage of thermal peak, 11:33216 (R;SU;In Russian)
Thermodynamic Properties
Thermodynamic properties of a three-dimensional defect system, 11:33242 (J;US)
CUMULATIVE EFFECT
See PARTICLE PRODUCTION
CURRENT-DRIVE HEATING
Efficiency
RF ramp-up efficiency versus power, 11:33375 (J;US)
CUTTING TOOLS
Hard Facing
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)
CYANOGEN
Photolysis
Adiabatic approach in the theory of polyatomic photodissociation: Application to C_3N_2, 11:32383 (BA;US)
Predissociation
Adiabatic approach in the theory of polyatomic photodissociation: Application to C_3N_2, 11:32383 (BA;US)
CYCLIC ACCELERATORS
See also BEVALAC
CYCLOTRONS
SYNCHROTRONS
Coherent Scattering
Coherent collisions during in-beam Coulomb scattering, 11:32549 (R;SU;In Russian)
CYCLOALKANES
See also CYCLOHEXANE
DECALIN
Gas Chromatography
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
CYCLOALKENES
Molecular Structure
Characterization of matrix-isolated cyclopropen-3-yl by EPR spectroscopy, 11:32369 (J;US)
CYCLOHEXANE
Photoionization
Solute-induced photo-ionization of nonpolar liquids, 11:32379 (J;US)
CYCLOTRONS
Maintenance
Cyclotron operations and development, 11:32525 (RA;US)
Operation
Cyclotron operations and development, 11:32525 (RA;US)
Power Supplies
Stabilized pulse-width modulation power supplies, 11:32574 (R;SU;In Russian)

D

D MESONS
Prior to Jan. 1985 this information was indexed with the descriptor D-1865 RESONANCES.
Particle Decay
Possibilities of the search for short-lived Dsub(S)sup(0) mesons, 11:33019 (RA;SU;In Russian)
Particle Production
Possibilities of the search for short-lived Dsub(S)sup(0) mesons, 11:33019 (RA;SU;In Russian)
Weak Hadronic Decay
Decay $D^0 \rightarrow phiK^0$, 11:32990 (J;US)
D PLUS RESONANCES
See D MESONS
D ZERO RESONANCES
See D MESONS
D-1865 RESONANCES

DETONATION WAVES
Numerical Solution
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
Velocity
Applications of fiber optics to detonation events, 11:32658 (RA;US)
Study of booster materials with electromagnetic particle velocity gauges, 11:32657 (RA;US)
Wave Propagation
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
Modeling short pulse duration shock initiation of solid explosives, 11:32669 (RA;US)
DETONATIONS
Mathematical Models
Transition to detonation in a model problem, 11:32397 (R;US)
Numerical Analysis
Comparison of different numerical schemes for integration of hydrodynamic equations with Lagrange coordinates, 11:33250 (R;FR;In French)
DETONATORS
Safety
Electrostatic sensitivity, strength, and no-fire current of short-delay detonators. Report of Investigations/1985, 11:31354 (R;US)
Sensitivity
Electrostatic sensitivity, strength, and no-fire current of short-delay detonators. Report of Investigations/1985, 11:31354 (R;US)
DEUS
More general term than CO-GENERATION, and preferable for methods using both heat and electric power when both are produced simultaneously and in significant quantities.
See also COGENERATION
Design
Dual energy use for industrial, commerical, and building applications, 11:32088 (B;US)
Performance Testing
Dual energy use for industrial, commerical, and building applications, 11:32088 (B;US)
DEUTERIUM
Damage
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)
Diffusion
Permeation of deuterium implanted into fusion reactor materials, 11:33437 (J;US)
Distillation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Distribution
Nuclear reaction analysis technique to determine the penetration of hydrogenic species into glasses exposed to leaching solutions, 11:32288 (BA;US)
Isotope Effects
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)
Isotope Separation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Nuclear Reaction Analysis
Nuclear reaction analysis technique to determine the penetration of hydrogenic species into glasses exposed to leaching solutions, 11:32288 (BA;US)

Radiation Effects
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)
Ultraviolet Spectra
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)
DEUTERIUM COMPOUNDS
Chemical Reactions
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)
DEUTERIUM OXIDES

DIESEL ENGINES
Air Pollution Abatement
Environmental assessment of NOx control on a compression-ignition large-bore reciprocating internal-combustion engine. Volume 1. Technical results. Final report, April 1980-April 1981, 11:32146 (R;US)
Environmental assessment of NOx control on a compression ignition large-bore reciprocating internal-combustion engine. Volume 2. Data supplement. Final report, April 1980-April 1981, 11:32147 (R;US)
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 1. Technical results. Final report, April 1980-June 1981, 11:32149 (R;US)
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 2. Data supplement. Final report, April 1980-June 1981, 11:32150 (R;US)
Exhaust Gases
Measurements of the emissions from stationary diesel engines used in total energy plants and heat pumps, 11:32131 (R;DE;In German)
Functional Models
A diesel combustion bomb: Proof of concept, 11:31417 (B;US)
DIESEL FUELS
Atomization
Measurements and designs related to electrical spray modification in a T-56 combustor. Contractor report, August 1984-September 1985, 11:32516 (R;US)
Combustion Kinetics
A diesel combustion bomb: Proof of concept, 11:31417 (B;US)
Gums
Oxidation and gum formation in diesel fuels. Interim technical report, May-December 1985, 11:31404 (R;US)
Oxidation
Oxidation and gum formation in diesel fuels. Interim technical report, May-December 1985, 11:31404 (R;US)
Production
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
DIESEL OIL (FRACTION)
See DIESEL FUELS
DIFFERENTIAL EQUATIONS
See also NEUTRON DIFFUSION EQUATION
PARTIAL DIFFERENTIAL EQUATIONS
STURM-LIOUVILLE EQUATION

D Codes
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes, 11:33287 (R;US)
Numerical Solution
Solution of ordinary differential equations using power series with decomposed coefficients. Part 1. Mathematical analysis, 11:33474 (R;FR)
Some experiments with numerical pivoting in a code for solving large sparse stiff systems of odes, 11:33287 (R;US)

DIFFRACTION GRATINGS
See GRATINGS

DIFFRACTION (X-RAY)
See X-RAY DIFFRACTION

DIFFUSE SOLAR RADIATION
Mathematical Models
Solar irradiance conversion models, 11:31671 (RA;US)

DIFFUSION
Mathematical Models
Comparison of numerical pseudodiffusion and atmospheric diffusion, 11:32702 (J;GB)
Sturm-Liouville Equation
Stability of solutions to Sturm-Liouville diffusion equations, 11:33279 (J;US)

DIGESTER GAS
See METHANE

2-DIMENSIONAL CALCULATIONS
See TWO-DIMENSIONAL CALCULATIONS

3-DIMENSIONAL CALCULATIONS
See THREE-DIMENSIONAL CALCULATIONS

DINING HALLS
See RESTAURANTS

DINITROPHENOL
Nuclear Magnetic Resonance
Carbon-14 NMR spectrum (68 MHz) of 2,6-dinitrophenol in CDCl3 and the temperature variation of the chemical shifts in reference to intramolecuar hydrogen bond, 11:32372 (J;JP)

DIOXIN
Chemistry
Dioxin - which method of analysis to choose, 11:32780 (RA;DE;In German)
Toxicity
Dioxin - which method of analysis to choose, 11:32780 (RA;DE;In German)

DIPHENYLPHOSPHINE OXIDE
See ORGANIC PHOSPHORUS COMPOUNDS

DIRAC EQUATION
Nonlinear Problems
Existence of localized solutions of (1+1)-dimensional nonlinear Dirac equations with scalar selfinteraction, 11:33043 (R;DE)

DIRAC MATRICES
See DIRAC OPERATORS

DIRAC OPERATORS
Ground States
Semiclassical approach to Dirac operators in the ground state wave function representation, 11:33257 (R;FR)
Wave Functions
Semiclassical approach to Dirac operators in the ground state wave function representation, 11:33257 (R;FR)

DIRECT CONTACT HEAT EXCHANGERS
Technology Assessment
Technical assessment of a direct contact heat exchanger as an energy conservation retrofit option, 11:32092 (R;US)

DIRECT GAIN SYSTEMS
Prior to September 1980 HEAT GAIN was used to index this concept.
Solar Fraction
Generalized solar load ratio correlation for direct gain buildings, 11:31753 (R;US)

DISCHARGES (WASTES)
See WASTE DISPOSAL

DISPERSANTS (CHEMICAL)
See SURFACTANTS

DISPLACEMENT GAGES
Design
Remotely readable fiber optic compass, 11:32653 (P;US)
Fiber Optics
Remotely readable fiber optic compass, 11:32653 (P;US)

DISPOSAL (WASTES)
See WASTE DISPOSAL

DISPROPORTIONATION
See OXIDATION REDUCTION

DISSOLVED OXYGEN
See OXYGEN

DISTILLATES
Yields
Use of non-coal-derived heavy solvents in direct liquefaction of Wyodak coal (Coprocessing with six heavy oils), 11:31308 (RA;US)

DISTILLATION EQUIPMENT
Performance
High-pressure distillation of crude $ZrCl_4$. Open File report, 11:32339 (R;US)

DISTRIBUTED COLLECTOR POWER PLANTS
Solar Receivers
Progress in solar thermal distributed receiver technology, 11:31736 (J;US)

DISTRICT COOLING
Economics
Designing and developing a DHC system in Provo, Utah, 11:32116 (J;US)
Feasibility Studies
Designing and developing a DHC system in Provo, Utah, 11:32116 (J;US)
U.S. cities checking cogeneration potential for district heating, cooling, 11:32004 (J;US)

DISTRICT HEATING
Economic Impact
Expansion of district heating networks and the effects on the labour market and employment. Final report, 11:31978 (R;DE;In German)
Economics
Designing and developing a DHC system in Provo, Utah, 11:32116 (J;US)
Employment
Expansion of district heating networks and the effects on the labour market and employment. Final report, 11:31978 (R;DE;In German)
Feasibility Studies
Designing and developing a DHC system in Provo, Utah, 11:32116 (J;US)
U.S. cities checking cogeneration potential for district heating, cooling, 11:32004 (J;US)
Heat Distribution Systems
Expansion of district heating networks and the effects on the labour market and employment. Final report, 11:31978 (R;DE;In German)
Hydrothermal Systems
Phase 1 feasibility study: district heating and cooling using wastewater effluent and sea water in Olympia, Washington, 11:32003 (R;US)

DNA
Biological Radiation Effects
Relation between sedimentation behaviour of DNA-membrane complexes and DNA single- and double-strand breaks after irradiation with gamma-rays, pulse neutrons and ^{12}C ions, 11:32845 (R;SU)
Hybridization
Examination of the mitochondrial genome of revertant progeny from S cms maize with cloned S-1 and S-2 hybridization probes, 11:32813 (J;US)
Hybridization of DNA from methanogens with eubacterial probes, 11:32808 (RA;US)
Strand Breaks
Relation between sedimentation behaviour of DNA-membrane complexes and DNA single- and double-strand breaks after irradiation with gamma-rays, pulse neutrons and ^{12}C ions, 11:32845 (R;SU)

DNA MISMATCH
DNA Repair
DNA damage in human cells. Final technical report, August 1982-August 1985, 11:32798 (R;US)

DNA-ASE
Code number 3.1.4.5.
See also ENDONUCLEASES
Biological Effects
Nick translation of HeLa cell nuclei as a probe for locating DNase I-sensitive nucleosomes, 11:32803 (J;US)
DNP
See DINITROPHENOL
DODECANE
Bulk Density
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Enthalpy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
DOLOMITE
Multi-Element Analysis
Determination of lead, zinc, and magnesium in dolomite and its benefication products by use of x-ray-fluorescence spectrometry, 11:32336 (R;ZA)
DOMESTIC WASTES
See MUNICIPAL WASTES
DORMITORIES
See RESIDENTIAL BUILDINGS
DOSEMETERS
Calibration Standards
AAPM accredited dosimetry calibration laboratories, 11:32625 (RA;US)
Ionizing radiation laboratory of the Center for Devices and Radiological Health, 11:32627 (RA;US)
DOSIMETERS
See DOSEMETERS
DOSIMETRY
See also NEUTRON DOSIMETRY
PERSONNEL DOSIMETRY
Standards
Possible solutions to operational problems: the DOE perspective, 11:32619 (RA;US)
DOUBLE FOCUSING SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
DOUBLET-3 DEVICE
Beam Injection Heating
Doublet III operating regimes with improved energy confinement, 11:33345 (J;AT)
Confinement Time
Doublet III operating regimes with improved energy confinement, 11:33345 (J;AT)
Thermal Diffusivity
Measurement of thermal transport by synchronous detection of modulated electron heating in the Doublet III tokamak, 11:33348 (J;AT)
DOWEX
See ORGANIC ION EXCHANGERS
DPO
See ORGANIC PHOSPHORUS COMPOUNDS
DRIFT CHAMBERS
Performance
Performance of the SLD Central Drift Chamber prototype, 11:32634 (R;US)
DRIFT INSTABILITY
Institute for fusion studies. Progress report, September 1, 1984-August 31, 1985, 11:33293 (R;US)
DRILL HOLES
See BOREHOLES
DRILL SHIPS
See SHIPS
DRILLING (ROCK)

IONOSPHERE
Diffusion
Contributions to Large-Eddy Simulation. Part 1, 11:32695 (R;US)
Infrared Radiation
Atmospheric transmissivity: the effects of atmospheric attenuation on thermal radiation, 11:32749 (R;GB)
Optical Properties
Comparisons of meteorological and structure parameters in complex terrain, 11:32701 (R;US)
Radiation Monitoring
Report on R and D activities of Air Monitoring Section (Division of Radiological Protection) 1979-1984, 11:32740 (R;IN)
Radionuclide Migration
Predicting lift-off of major self-heating releases under the influence of a building, 11:32741 (R;FR)
Turbulence
Contributions to Large-Eddy Simulation. Part 1, 11:32695 (R;US)

EARTH MAGNETOSPHERE
Electrons
Highly relativistic electrons in the earth's outer magnetosphere 1. Lifetimes and temporal history 1979—1984, 11:32926 (J;US)
Shock Waves
Motion of ions specularly reflected off a quasi-parallel shock in the presence of large-amplitude, monochromatic MHD waves, 11:32925 (J;US)
EARTH-COVERED BUILDINGS
Energy Consumption
Experiences in monitoring the thermal performance of an earth-sheltered quadruplex, 11:32051 (RA;US)
EARTHQUAKES
Damage
Earthquake safety program at Lawrence Livermore National Laboratory, 11:32494 (RA;US)
Ground motions by microtremor and earthquake observations in relation to damages of the Central Japan Sea Earthquake (M = 7.7), May 26, 1983, 11:32875 (RA;US)
Design Basis Accidents
Structural performance of the DOE's Idaho National Engineering Laboratory during the 1983 Borah Peak Earthquake, 11:32498 (RA;US)
Emergency Plans
Seismic Safety Guide, 11:32480 (RA;US)
Forecasting
Design of a space-based sensor to predict the intensity and location of earthquakes from electromagnetic radiation. Master's thesis, 11:32873 (R;US)
Hazards
Earthquake safety program at Lawrence Livermore National Laboratory, 11:32494 (RA;US)
Progress towards developing consistent design and evaluation guidelines for DOE facilities subjected to natural phenomena hazards, 11:32509 (RA;US)
Remote Sensing
Design of a space-based sensor to predict the intensity and location of earthquakes from electromagnetic radiation. Master's thesis, 11:32873 (R;US)
Risk Assessment
Natural phenomena risk assessment at Rocky Flats Plant, 11:32489 (RA;US)
Seismic hazard assessment of the Hanford region, Eastern Washington State, 11:32876 (RA;US)
Standardization of natural phenomena risk assessment methodology at the Savannah River Plant, 11:32505 (RA;US)
Seismic Detection
1983 Borah Peak, Idaho earthquake - a review of seismicity, surface faulting and regional tectonics, 11:32874 (RA;US)
Soil Mechanics
Liquefaction of soils during earthquakes. Final report, 11:32882 (R;US)
ECCS
Simulation
THETIS 80% blocked cluster experiment. Part 1. Description of THETIS rig, the 80% blocked cluster assembly and experimental procedures, 11:31887 (R;GB)
THETIS 80% blocked cluster experiment. Part 5. Level swell experiments, 11:31888 (R;GB)
THETIS 80% blocked cluster experiment. Part 6. Overview, 11:31889 (R;GB)
ECONOMIC ANALYSIS
Programming
Microcomputer software for energy conservation investment analysis, 11:32117 (J;US)
ECONOMIC REGULATORY ADMINISTRATION
Energy Policy
Conversion-to-coal rules issued by the DOE (US Department of Energy), 11:31778 (J;US)
Environmental Policy
Conversion-to-coal rules issued by the DOE (US Department of Energy), 11:31778 (J;US)
ECR HEATING
Antennas
Final report for TMX-U systems support, 11:33411 (R;US)
Microwave Amplifiers
Prospects for high power gyrotrons, 11:33353 (J;GB)
Planning
Prospects for high power gyrotrons, 11:33353 (J;GB)
EDTA
Leaching
Leachability of decontamination reagents from cement waste forms, 11:32323 (BA;US)

FLOW RATE
Time-Series Analysis
Diverting structure's effects on a river flow time series, 11:31664 (J;US)
FLOWMETERS
Design
A wide-range vortex shedding flowmeter for high temperature helium gas, 11:31847 (BA;US)
Performance
A wide-range vortex shedding flowmeter for high temperature helium gas, 11:31847 (BA;US)
Performance Testing
Development of an in-situ hydrogen measuring instrument for coal liquefaction processes. Quarterly report, January-March 1986, 11:31312 (R;US)
FLUE GAS
Air Pollution Control
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)
Air Pollution Monitoring
Environmental assessment of a watertube boiler firing a coal-water slurry. Volume 1. Technical results. Final report, January 1984-March 1985, 11:31346 (R;US)
Environmental assessment of NH_3 injection for an industrial package boiler. Volume 1. Technical results. Final report, January 1983-January 1984, 11:32518 (R;US)
Denitrification
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
Desulfurization
[Surface science model studies for flue gas cleanup process on CuO and Fe_3O_3]. Technical progress report, September-November 1985, 11:31343 (R;US)
Coal power stations clean their flue gas - what to do with the residues, 11:31345 (RA;DE;In German)
Computer economics of physical coal cleaning and flue gas desulfurization. Final report. Report for October 1979-June 1983, 11:31783 (R;US)
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal. Report for September 1984-December 1985, 11:32726 (R;US)
Studies on the reaction of calcined limestone with sulfur dioxide. Technical progress report, January-March 1986, 11:31314 (R;US)
Update of dry-sodium injection in fabric filters, 11:31781 (RA;US)
FLUID FLOW

Combustion Products
Analysis of costs and cost effectiveness of SO_2 control for mixed-fuel-fired steam generating units. Final report, 11:31782 (R;US)
FOSSIL-FUEL POWER PLANTS
Air Pollution Abatement
A field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:31786 (J;US)
Air Pollution Control
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
Air Pollution Monitoring
Fate of mercury released from power plants. Final report, 11:31785 (R;US)
Ashes
Selection of ash for utilization and economics of ash use in various products, 11:31342 (RA;US)
Coal Preparation
Computer economics of physical coal cleaning and flue gas desulfurization. Final report. Report for October 1979-June 1983, 11:31783 (R;US)
Electrostatic Precipitators
A field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:31786 (J;US)
Energy Conversion
Conversion-to-coal rules issued by the DOE (US Department of Energy), 11:31778 (J;US)
Flue Gas
Computer economics of physical coal cleaning and flue gas desulfurization. Final report. Report for October 1979-June 1983, 11:31783 (R;US)
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
Fly Ash
A field study of a combined NH_3-SO_3 conditioning system on a cold-side fly ash precipitator at a coal-fired power plant, 11:31786 (J;US)
Selection of ash for utilization and economics of ash use in various products, 11:31342 (RA;US)
Fuel Substitution
Conversion-to-coal rules issued by the DOE (US Department of Energy), 11:31778 (J;US)
Pollution Control Equipment
EPA's LIMB (Environmental Protection Agency's Limestone Injection Multistage Burner) research, development, and demonstration program. Report for September 1984-January 1986, 11:31784 (R;US)
Start-Up
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Steam Turbines
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)
Water Pollution Control
Techniques and models to estimate the health benefits of controlling toxic substances emitted from coal-fired power plants. Final report, 11:31376 (R;US)
Water Supply
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)
FOUNDRIES
Energy Efficiency
Space heating using waste heat recovered from a bale-out furnace. A demonstration at Brycast (Light Alloys) Ltd. [Wolverhampton], 11:32102 (R;GB)
Space Heating
Space heating using waste heat recovered from a bale-out furnace. A demonstration at Brycast (Light Alloys) Ltd. [Wolverhampton], 11:32102 (R;GB)
Waste Heat Utilization

FREE ELECTRON LASERS
Construction of a high-energy linear accelerator for research in free-electron lasers, beam-wave interactions, spectroscopy, and microcircuitry fabrication. Final report, 1 August 1983-31 July 1984, 11:32556 (R;US)
Design
Partially coherent radiation, 11:32452 (RA;US)
Electron Beams
Results of the UCSB FEL electron beam recirculation experiment. Technical report, 14 January 1982-13 January 1983, 11:32546 (R;US)
Gain
Cylindrical Gaussian eigenmodes of a rectangular waveguide resonator: three-dimensional numerical calculation of gain per mode. Technical report, 1 October 1983-30 September 1984, 11:32446 (R;US)
Laser Cavities
Possibility of obtaining coherent short wave radiation from a solid state free electron laser, 11:32450 (R;US)
Mathematical Models
Possibility of obtaining coherent short wave radiation from a solid state free electron laser, 11:32450 (R;US)
Mode Locking
Cylindrical Gaussian eigenmodes of a rectangular waveguide resonator: three-dimensional numerical calculation of gain per mode. Technical report, 1 October 1983-30 September 1984, 11:32446 (R;US)
Operation
First free-electron laser in China went in operation, 11:32460 (TJ;US)
Performance
Partially coherent radiation, 11:32452 (RA;US)
Resonators
Cylindrical gaussian-hermite modes in rectangular waveguides resonators. Technical report, 14 January 1981-13 January 1982, 11:32445 (R;US)
Storage Rings
Storage-ring technology for free-electron lasers. Final technical report, 25 April 1983-24 April 1984, 11:32444 (R;US)
Technology Assessment
XUV/VUV free-electron laser oscillator, 11:32461 (BA;US)
Uses
Analysis of FEL optical systems with grazing incidence mirrors, 11:32423 (R;US)

Gas generator research and development BI-GAS process. Final report for August 19, 1971-October 31, 1979. Vol. 1., 11:31319 (R;US)
GAS LASERS
Cadmium
Transport parameter calculation in helium and helium-cadmium mixtures. Self consistent determination of the space charge field in the cathode region of a glow discharge, 11:32451 (R;FR;In French)
Helium
Transport parameter calculation in helium and helium-cadmium mixtures. Self consistent determination of the space charge field in the cathode region of a glow discharge, 11:32451 (R;FR;In French)
Laser Materials
Measurement of gain in an optically-excited mixture of D2 and Ar at high density, 11:32458 (J;US)
Transport Theory
Transport parameter calculation in helium and helium-cadmium mixtures. Self consistent determination of the space charge field in the cathode region of a glow discharge, 11:32451 (R;FR;In French)

GAS TURBINE ENGINES
Combustors
Gas turbine component screening program: fuel flexible combustor, 11:31776 (R;US)
Fuel Substitution
An investigation of the issues surrounding the fuels adaptability of the advanced gas turbine, 11:32125 (B;US)
Fuel Systems
Gas turbine component screening program: fuel flexible combustor, 11:31776 (R;US)
GAS TURBINES
See also COAL-FIRED GAS TURBINES
Efficiency
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)
Simulation
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)
Temperature Effects
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)
Turbine Blades
Development of gas turbine simulation program for coal gasification combined cycle evaluation, 11:31775 (R;JP)
GAS UTILITIES
Planning
Financial and regulatory issues of packaged cogeneration, 11:31434 (J;US)
GAS WELLS
See NATURAL GAS WELLS
GASEOUS EFFLUENTS
See GASEOUS WASTES
GASEOUS WASTES
See also EXHAUST GASES
FLUE GAS
Hazards
Gas from waste dumps - a source of danger or of energy, 11:31663 (RA;DE;In German)
Radioactive Waste Processing
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
GASES
See also AIR
COMPRESSED GASES
ELECTRON GAS
EXHAUST GASES
FUEL GAS
SYNTHESIS GAS
VAPORS
Air Pollution Control
High temperature gas filtration with ceramic filter media: problems and solutions, 11:31780 (RA;US)
Chemical Reactions
Reactions of energetic carbon-11 in homologous gas-phase halocarbons, 11:32389 (J;US)
Diffusion
Comparison between data from the Thorney Island heavy gas trials and predictions of simple dispersion models, 11:32694 (R;GB)
Heat Transfer
Radiation augmented propulsion feasibility. Final report, 17 September 1984-28 September 1985, 11:31665 (R;US)
GASOHOL
Previous to August, 1979 this concept was indexed as gasoline AND mixtures AND ethanol or methanol.
Combustion Products
In-use evaporative canister evaluation. Final report, December 1984-June 1985, 11:32148 (R;US)
GASOLINE
See also UNLEADED GASOLINE
Production
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
Quantitative Chemical Analysis
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Reviews
Petroleum supply monthly, February 1986, 11:31407 (R;US)
Storage Facilities
Bulk plants: technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee. Summary report, 11:32724 (R;US)
Vapors
Barge-loading facilities: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32723 (R;US)
Bulk plants: technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee. Summary report, 11:32724 (R;US)
GASOLINE ENGINES
See INTERNAL COMBUSTION ENGINES
GASTEROPODS
See MOLLUSCS
GCFR TYPE REACTORS
Breeding Ratio
Analysis of breeding performances of the steam cooled fast reactor, 11:31844 (R;SU;In Russian)
Prospects of breeding improvements in steam cooled fast reactors with the heterogeneous cores, 11:31845 (R;SU;In Russian)
Flowmeters
A wide-range vortex shedding flowmeter for high temperature helium gas, 11:31847 (BA;US)
Reactor Cooling Systems
Analysis of breeding performances of the steam cooled fast reactor, 11:31844 (R;SU;In Russian)
GELATIN
Anaerobic Digestion
Defined starter culture for biomethanation of proteinaceous wastes, 11:31630 (RA;US)
GENE LOCI
See GENES
GENE REGULATION
Biochemistry
Molecular and cellular mechanisms of cadmium resistance in cultured cells, 11:32799 (R;US)
GENERATORS (RADIOISOTOPE)
See RADIOISOTOPE GENERATORS
GENERATORS (STEAM)
See STEAM GENERATORS
GENES
Cloning
Cloning and expression of the gene for bacteriophage T7 RNA polymerase, 11:32811 (J;US)
Cloning in Streptococcus pneumoniae of the gene for DpnII DNA methylase, 11:32812 (J;US)
GEOCHRONOLOGY
See AGE ESTIMATION
GEODESY
Automation
Automation by microcomputer of a geodetic distance measuring instrument: The distinvar, 11:32643 (R;XC)
GEOLOGIC FRACTURES
Radionuclide Migration
Transport and capture of colloidal particles in single fractures, 11:31593 (BA;US)
Remote Sensing
Eastern gas shales lineament analysis, 11:31421 (RA;US)
Seismic Detection
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
GEOLOGIC STRUCTURES
See also GEOLOGIC FRACTURES
Images
Digital processing of Landsat tm images for lineament occurrence and spatial frequency in sedimentary rocks, 11:32880 (R;US)
GEORGIA
Streams
Floods on Pope and Town Creeks and Tributary No. 1 to Lookout Creek at mile 18.91 in Dade County and Trenton, Georgia, 11:32871 (R;US)
GEOTHERMAL AREAS
See GEOTHERMAL FIELDS

GEOTHERMAL FIELDS
See also SALTON SEA GEOTHERMAL FIELD
Leasing
Constraints to leasing and development of federal resources: OCS oil and gas and geothermal. Final report, 11:31764 (R;US)
GEOTHERMAL GRADIENTS
Temperature Measurement
Analysis of temperature-time data from 3 m drillholes at Crystal Hot Springs, Utah, 11:31763 (R;US)
GEOTHERMAL REGIONS
See GEOTHERMAL FIELDS
GEOTHERMAL SYSTEMS
See also HOT-DRY-ROCK SYSTEMS
Fractured Reservoirs
Effects of non-condensible gases on fluid recovery in fractured geothermal reservoirs, 11:31766 (R;US)
Two-Phase Flow
Preliminary studies of two-phase effects on pressure transient data, 11:31767 (R;US)
GERMAN DR ORGANIZATIONS
See also ZFK ROSSENDORF
Research Programs
Joint annual report 1984, 11:31996 (R;DD;In German and English)
GERMAN FEDERAL REPUBLIC
See FEDERAL REPUBLIC OF GERMANY
GERMANIUM
Crystal-Phase Transformations
Phase transition studies of germanium to 1.25 Mbar, 11:32269 (J;US)
Electron Spin Resonance
Defect identification in high-purity semiconductors, 11:32281 (J;US)
Electronic Structure
Photoemission study of Si(111)-Ge(5 x 5) surfaces, 11:32266 (J;US)
Neutron Diffraction
Theoretical investigation of neutron scattering cross sections in Si and Ge, 11:33225 (J;US)
Photoelectron Spectroscopy
Photoemission study of Si(111)-Ge(5 x 5) surfaces, 11:32266 (J;US)
Purification
Defect identification in high-purity semiconductors, 11:32281 (J;US)
GERMANIUM SULFIDES
Chemical Preparation
Thermochemistry of inorganic sulfur compounds. II. Standard enthalpy of formation of germanium disulfide, 11:32361 (J;GB)
Thermodynamic Properties
Thermochemistry of inorganic sulfur compounds. II. Standard enthalpy of formation of germanium disulfide, 11:32361 (J;GB)
GERMANY (FEDERAL REPUBLIC)
See FEDERAL REPUBLIC OF GERMANY
GERMS (MICROORGANISMS)
See MICROORGANISMS
GLASS
See also BOROSILICATE GLASS
Absorption Spectra
Transition metal ions in silicate melts. IV. Cobalt in sodium silicate and related glasses, 11:32276 (J;US)
Chemical Lasers
Chemical flashlamp pumping of Nd:glass, 11:32459 (BA;US)
Chemical Reactions
Experimental alteration of basalt glass applied to the alteration of nuclear waste glass, 11:32250 (R;US)
Electron Microprobe Analysis
Baslat glass: an analogue for the ecaluation of the long-term stability of nuclear waste form borosilicate glasses, 11:32308 (BA;US)
Hydration
Baslat glass: an analogue for the ecaluation of the long-term stability of nuclear waste form borosilicate glasses, 11:32308 (BA;US)
Leaching
Baslat glass: an analogue for the ecaluation of the long-term stability of nuclear waste form borosilicate glasses, 11:32308 (BA;US)
Determination of early stages of glass dissolution by pH titration, 11:32287 (BA;US)
Mechanical Properties
Glass breaking strength - the role of surface flaws and treatments, 11:31692 (RA;US)
Physical Radiation Effects
Ion implantation damage processes in nuclear waste glass and other silicate glasses, 11:32309 (BA;US)
Rock-Fluid Interactions
Characterization of hydrated surface layers on nuclear waste glasses in infrared reflectance spectroscopy, 11:32286 (BA;US)
GLASS INDUSTRY
Furnaces
Market impact of glass batch preheaters. Working paper, 11:32108 (R;US)
GLASS MELTERS
See CERAMIC MELTERS
GLASSY METALS
See METALLIC GLASSES
GLAUBER'S SALT
See SODIUM SULFATES
GLOBAL FALLOUT
Mathematical Models
Global environmental transport models for tritium, 11:32747 (J;US)
GLOBAL RISK
See HAZARDS
GLOVEBOXES
Decommissioning
Plutonium active operation of the Winfrith modular containment system, 11:32412 (R;GB)
Decontamination
Plutonium active operation of the Winfrith modular containment system, 11:32412 (R;GB)
GLUCOSE
Fermentation
Production of chemicals and fuels by acid hydrolysis and fermentation of MSW (Municipal solid wastes), 11:31657 (RA;US)
GLUONS
Configuration Mixing
Gluon and q anti q mixing in the eta-eta' G (identical to iota (1440)) system, 11:32998 (R;BR)
GOBAR GAS
See METHANE
GOLD
Charged-Particle Transport
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
Electron-Atom Collisions
Monokinetic electron backscattering from amorphous or polycrystalline specimens, 11:32934 (R;FR;In French)
Physical Radiation Effects
Dependence of heavy-ion-induced adhesion on energy loss and time, 11:32212 (J;US)
GOLD 197 TARGET
Argon 40 Reactions
^{197}Au target fragmentation induced by 1.8 GeV/A ^{40}Ar, 11:33157 (RA;US)
Light particle correlations in Ar + Au reaction at 60 MeV/A, 11:33132 (R;FR)
Target fragment kinematics in the interaction of 44 MeV/A ^{40}Ar with ^{197}Au, 11:33156 (RA;US)
Carbon 12 Reactions
Target fragment angular distributions in the interaction of 86 MeV/A ^{12}C with ^{197}Au, 11:33154 (RA;US)
Target fragment kinematics for the reaction of 49 MeV/A ^{12}C with ^{197}Au, 11:33155 (RA;US)
Heavy Ion Reactions
Electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au targets by relativistic heavy ions to Z = 26, 11:33136 (J;US)

GOLD ALLOYS
Dislocations
Collapse of defect cascades to dislocation loops, 11:32166 (R;US)
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)
GOLD IODIDES
Superconductivity
Ambient-pressure superconductivity at the highest temperature (5 K) observed in an organic system: β-(BEDT-TTF)$_2$AuI$_2$, 11:32245 (J;US)
GONIOMETERS
Specifications
Design and construction of an automatic texture goniometer, 11:32647 (RA;BR;In Portuguese)
GRAIN ALCOHOL
See ETHANOL
GRAINS (CEREAL)
See CEREALS
SEEDS
GRAMINEAE
See GRASS
GRAND UNIFIED THEORY
Phase Transformations
Bulk viscosity driven inflationary model, 11:33025 (R;BR)
Research Programs
Particle theory and cosmology. Final report, July 16, 1984-March 31, 1986, 11:33051 (R;US)
GRANITES
Permeability
Permeability changes in crystalline rocks due to temperature: effects of mineral assemblage, 11:32892 (BA;US)
Radioactive Waste Disposal
Verification of NAMMU using HYDROCOIN, 11:31493 (R;GB)
Rock Mechanics
Instrumentation program for rock mechanics and spent fuel tests at the Nevada Test Site (Climax stock), 11:32885 (R;US)
Temperature Effects
Instrumentation program for rock mechanics and spent fuel tests at the Nevada Test Site (Climax stock), 11:32885 (R;US)
GRANULAR MATERIALS
For unspecified materials having a granular texture.
Fluid Flow
Discrete particle computer methods for modeling granular flow, 11:32970 (R;US)
GRAPHITE
Crystal Structure
High-resolution transmission electron microscopy on KH/sub x/—GIC's, 11:32278 (J;US)
Transmission Electron Microscopy
High-resolution transmission electron microscopy on KH/sub x/—GIC's, 11:32278 (J;US)
GRAPHITE MODERATOR
See GRAPHITE
GRASS
See also CEREALS
Gasification
Energy from biological processes. Vol. I, 11:31652 (R;US)
GRATINGS
Optical systems for synchrotron radiation. Lecture 3. Monochromator systems. Revision, 11:33261 (R;US)
GRAVITATIONAL FIELDS
Measuring Methods
Development of a sensitive superconducting accelerometer and gravity gradiometer. Final report, 1 October 1979-30 September 1984, 11:32410 (R;US)
GREAT BRITAIN
See UNITED KINGDOM
GREENHOUSE EFFECT
Research Programs
International Geosphere/Biosphere Program, 1984, 11:32755 (R;US)
GREENHOUSES
Energy Conservation
Energy conservation strategies: analysis of investment alternatives, 11:32093 (RA;US)
Plant Growth
Irradiance and plant temperature monitor/controller, 11:32094 (RA;US)
GROUND COVER
Moisture
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
Radionuclide Migration
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
GROUND DISPOSAL
Radionuclide Migration
Joint DOE/NRC field study of tracer migration in the unsaturated zone, 11:31586 (R;US)
GROUND MOTION
Data Acquisition
Guidelines for earthquake ground motion definition for the Eastern United States, 11:31894 (RA;US)
Strong ground motion data from the 1983 Borah Peak, Idaho earthquake recorded at the Idaho National Engineering Laboratory, 11:32877 (RA;US)
GROUND WATER
Anaerobic microbial transformations in subsurface environments: highlights, 11:32856 (R;US)
Contamination
Hazardous waste. Status of Air Force's Installation Restoration Program, 11:32790 (R;US)
Nonradiological groundwater quality at low-level radioactive waste disposal sites (Sheffield, IL and Barnwell, SC), 11:31587 (R;US)
Corrosive Effects
Effect of Grande Ronde basalt groundwater composition and temperature on the corrosion of low-carbon steel in the presence of basalt-bentonite packing, 11:32223 (BA;US)
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Flow Rate
Effect of groundwater flow on release rate behavior of borosilicate glass, 11:32291 (BA;US)
Monitoring
Chemical effluents technology waste disposal investigations, July, August, September 1956, 11:31584 (R;US)
Pollution
Protection of public water supplies from ground-water contamination. Seminar publication, 11:32785 (R;US)
Pollution Control
Fiscal year 1984 program report: Connecticut Institute of Water Resources, 11:32725 (R;US)
Radiolysis
Generalized model for the analysis of groundwater radiolysis, 11:32388 (BA;US)
Radionuclide Migration
Groundwater contamination at the inactive Riverton, Wyoming uranium mill tailings, 11:31597 (BA;US)
investigation of the hydrothermal interaction of ^{99}Tc-doped glass with basalt repository nuclear waste package components, 11:32891 (BA;US)
Leaching Savahhanh River Plant nuclear waste glass in a saturated tuff environment, 11:32298 (BA;US)
Mathematical simulation of contaminant distribution in and around the uranium mill tailing piles, Riverton, Wyoming, 11:31601 (BA;US)
Neutralizing barrier for reducing contaminant migration from a uranium mill tailings disposal pond, 11:31570 (BA;US)
NNWSI waste form performance test development, 11:31591 (BA;US)
Transport code for radiocolloid migration: with an assessment of an actual low-level waste site, 11:31596 (BA;US)
Redox Potential
Limitations in determining redox chemistry in basalt groundwaters at the Hanford site, 11:32899 (R;US)

Redox Reactions
Limitations in determining redox chemistry in basalt groundwaters at the Hanford site, 11:32899 (R;US)
Sampling
Anoxic collection and analysis of subsurface water samples, 11:32776 (R;US)
Water Quality
Nonradiological groundwater quality at low-level radioactive waste disposal sites (Sheffield, IL and Barnwell, SC), 11:31587 (R;US)
GROUND-WATER RESERVES
See AQUIFERS
GUINEA PIGS
Sensitivity
Effects of sulfuric acid mist inhalation on mucous clearance and on airway fluids of rats and guinea pigs, 11:32858 (J;US)
GUMS
Oxidation and gum formation in diesel fuels. Interim technical report, May-December 1985, 11:31404 (R;US)
GUNS
Projectiles
Appropriate MAWP static gas load for launching grenades from the M-16, A-1 rifle, 11:33459 (R;US)
GYPSUM
Solubility
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
GYROSCOPES
Ring Lasers
Laser-feedbackccontrol design for passive-ring-laser gyros in a very-high-finesse cavity. Master's thesis, 11:32447 (R;US)

H

H CODES
Comparative Evaluations
Evaluation of XSDRN code for PWR cross-section generation, 11:31828 (R;BR;In Portuguese)
HADRON REACTIONS
Particle Production
Possibilities of the search for short-lived Dsub(S)sup(0) mesons, 11:33019 (RA;SU;In Russian)
HADRON-HADRON INTERACTIONS
Deep Inelastic Scattering
Finite-energy sum rules and their consequences, 11:33011 (RA;SU;In Russian)
Elastic Scattering
Model of hadron elastic scattering and diffraction dissociation processes at high energies, 11:33008 (RA;SU;In Russian)
Model of hadron elastic scattering and diffraction dissociation processes at high energies. 2. Asymptotic behaviour of hadron form factors, 11:33009 (RA;SU;In Russian)
Quantum Chromodynamics
QCD asymmetry and measurement of structure functions of polarized hadron, 11:33069 (R;SU;In Russian)
HADRONIC ATOMS
X-Ray Spectra
Antiproton-nucleus interaction: review of the experimental situation, 11:33174 (R;FR)
HADRONS
See also MESONS
Form Factors
Model of hadron elastic scattering and diffraction dissociation processes at high energies. 2. Asymptotic behaviour of hadron form factors, 11:33009 (RA;SU;In Russian)
Quark Model
Valon model for hadrons and their interactions, 11:33088 (BA;US)
HAFNIUM
Solvent Extraction
Extraction of zirconium and hafnium thiocyanates by methyl isobutyl ketone - thiocyanic acid from chloride medium, 11:32331 (R;BR;In Portuguese)
HAFNIUM 180
Beta Decay
Nucleosynthesis of ^{180}Ta/sup m/, 11:32914 (RA;US)
HALL GENERATORS
See MHD GENERATORS
HALOGENATED ALIPHATIC HYDROCARBONS
Chemical Reactions
Reactions of energetic carbon-11 in homologous gas-phase halocarbons, 11:32389 (J;US)
Mathematical Models
Lipid peroxidation model for halogenated hydrocarbon toxicity. Kinetics of peroxyl radical processes involving fatty acids and Fe(III) porhyrins, 11:32816 (J;NL)
Toxicity
Lipid peroxidation model for halogenated hydrocarbon toxicity. Kinetics of peroxyl radical processes involving fatty acids and Fe(III) porhyrins, 11:32816 (J;NL)
HAMILTONIAN FUNCTION
Phase Space
On the generation of equivalent Hamiltonians, 11:33267 (R;BR)
HANFORD ATOMIC PRODUCTS OPERATION
See HAPO
HANFORD ENGINEERING DEVELOPMENT LABORATORY
Design
Natural phenomena design for safety, 11:32486 (RA;US)
Emergency Plans
Natural phenomena design for safety, 11:32486 (RA;US)
Modifications
Natural phenomena design for safety, 11:32486 (RA;US)
Safety
Natural phenomena design for safety, 11:32486 (RA;US)
HANFORD RESERVATION
Environmental Effects
Dispersion of dissolved material in the Columbia River, 11:31583 (R;US)
Ground Water
Chemical effluents technology waste disposal investigations, July, August, September 1956, 11:31584 (R;US)
Hydrology
Chemical effluents technology waste disposal investigations, July, August, September 1956, 11:31584 (R;US)
Mineral Resources
Mineral resource analysis of the proposed site for underground storage of high-level commercial nuclear waste, Hanford, Washington, 11:31580 (BA;US)
Mineralogy
Mineral resource analysis of the proposed site for underground storage of high-level commercial nuclear waste, Hanford, Washington, 11:31580 (BA;US)
Production Reactors
Environmental characterization of two potential locations at Hanford for a new production reactor, 11:31875 (R;US)
Radioactive Waste Management
Chemical effluents technology waste disposal investigations, July, August, September 1956, 11:31584 (R;US)
Seismicity
Seismic hazard assessment of the Hanford region, Eastern Washington State, 11:32876 (RA;US)
HAPO
Personnel
Mortality studies of Hanford workers, 11:32850 (R;US)
Radioactive Effluents
Dispersion of dissolved material in the Columbia River, 11:31583 (R;US)
Radioactivity in gaseous waste discharged from the separations facilities during 1985, 11:32745 (R;US)
Thermal Effluents
Dispersion of dissolved material in the Columbia River, 11:31583 (R;US)
HARD COAL
See ANTHRACITE
HARRIS-1 REACTOR
Reactor Safety
Safety Evaluation Report related to the operation of Shearon Harris Nuclear Power Plant, Unit No. 1 (Docket No. STN 50-400). Supplement No. 3, 11:31912 (R;US)

HAWAII
Research Programs
Hawaii Natural Energy Institute. Annual report, 1985, 11:31992 (R;US)
HAZARDOUS MATERIALS
Not for radioactive materials.
Accidents
Hazardous materials accident report - anhydrous hydrogen fluoride release from NATX 9408, Train No. BNEI3Y at Conrail's Receiving Yard, Elkhart, Indiana, February 4, 1985, 11:31986 (R;US)
Air Pollution Abatement
Evaluation of control technologies for hazardous air pollutants. Volume 1. Technical report. Final report, August 1984-October 1985, 11:32728 (R;US)
Evaluation of control technologies for hazardous air pollutants. Volume 2. Appendices. Final report, August 1984-October 1985, 11:32729 (R;US)
Air Transport
Royal Decree 1749/1984 of 1 August approving the national regulations on the safe transport of dangerous goods by air together with technical instructions for the safe transport of dangerous goods by air, 11:31485 (R;ES;In Spanish)
Combustion
Application of a glass furnace system to low-level radioactive and mixed waste disposal, 11:31515 (R;US)
Ground Disposal
Leachate collection and gas migration and emission problems at landfills and surface impoundments. Final report, September 1983-March 1985, 11:32727 (R;US)
Inventories
Chemical inventory. Environmental Protection Agency's proposed inventory update, 11:31974 (R;US)
Meetings
Management of uranium mill tailings, low-level waste and hazardous waste, 11:31568 (B;US)
Road Transport
17 May 1985 - Ministerial Order made in implementation of Sections 3, 6 and 8 of the Royal Order of 5 November 1982 on training certificates for drivers of vehicles for road transport of hazardous materials in containers, 11:31486 (R;BE;In French and Dutch)
Waste Disposal
Assessment of risk methodologies for DOE hazardous chemical waste sites. Status report for period ending September 30, 1985, 11:32757 (R;US)
Hazardous waste. Status of Air Force's Installation Restoration Program, 11:32790 (R;US)
Pollution control. Information on chemical industry safety equipment expenditures, 11:31983 (R;US)
Waste Management
Managing the Department of Energy's hazardous and mixed defense wastes, 11:31496 (R;US)
Mitigating long term risk: an instrument for evaluating treatment, storage, and disposal facilities, 11:31516 (R;US)
Water Pollution Control
Fiscal year 1984 program report: Connecticut Institute of Water Resources, 11:32725 (R;US)
HAZARDOUS MATERIALS SPILLS
Air Pollution
Development of a fuel-spill/vapor-migration modeling system. Final report, October 1984-March 1985, 11:31403 (R;US)
Hazardous materials accident report - anhydrous hydrogen fluoride release from NATX 9408, Train No. BNEI3Y at Conrail's Receiving Yard, Elkhart, Indiana, February 4, 1985, 11:31986 (R;US)
HAZARDS
See also FIRE HAZARDS
Emergency Plans
Analysis and design of Fuel Cycle Plant for natural phenomena hazards, 11:32487 (RA;US)
Risk Assessment
Facilities upgrade for natural forces: traditional vs. realistic approach, 11:32492 (RA;US)

Control Systems
Control of heating systems in buildings, 11:32079 (R;FI;In Finnish)
Design
Monovalent gas heat pump for all-year use, complex Felix-Klein-Strasse, 8520 Erlangen. Final report, 11:32037 (R;DE;In German)
Gas Heat Pumps
Monovalent gas heat pump for all-year use, complex Felix-Klein-Strasse, 8520 Erlangen. Final report, 11:32037 (R;DE;In German)
HEAVY ION ACCELERATORS
Includes combined accelerator types for heavy ion acceleration.
Beam Dynamics
Multiple-beam experiment, 11:32554 (RA;US)
Theory, 11:32536 (RA;US)
Beam Transport
Single-beam transport experiment, 11:32553 (RA;US)
Design
Minicollider, 11:32538 (RA;US)
Other experimental and developmental activities, 11:32535 (RA;US)
Specifications
Theory, 11:32536 (RA;US)
HEAVY ION FUSION REACTIONS
Capture
Heavy-ion radiative capture, 11:33455 (BA;US)
Coulomb Field
Heavy-ion resonances, 11:33204 (BA;US)
Data Compilation
Compilation of investigated fusion reactions with heavy ions. Supplement. Part 2. $Z_1 = 11\text{-}92$, 11:33188 (R;PL)
Experimental Data
Experimental overview of sub-barrier fusion, 11:33125 (R;US)
Radiative Decay
Heavy-ion radiative capture, 11:33455 (BA;US)
Resonance
Heavy-ion resonances, 11:33204 (BA;US)
Reviews
Experimental overview of sub-barrier fusion, 11:33125 (R;US)
Threshold Energy
Effect of dissipation on dynamical fusion thresholds, 11:33195 (R;US)
HEAVY ION REACTIONS

Breakup Reactions
Break up of light ions in the nuclear and Coulomb field of nuclei, 11:33193 (R;DE)
Capture
Heavy-ion radiative capture, 11:33455 (BA;US)
Coulomb Field
Heavy-ion resonances, 11:33204 (BA;US)
Dissociation
Electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au targets by relativistic heavy ions to $Z = 26$, 11:33136 (J;US)
Energy Dependence
Dynamics of the input parameters, 11:33176 (R;FR;In French)
Hartree-Fock Method
TDHF calculations of heavy-ion collisions, 11:33205 (BA;US)
Neutron Emission
Pre-equilibrium decay processes in energetic heavy ion reactions, 11:33198 (R;US)
Nuclear Reaction Kinetics
Tilting mode in nuclear reactions, 11:33196 (R;US)
Pionization
Pions from and about heavy ions, 11:33039 (BA;US)
Pre-equilibrium decay processes in energetic heavy ion reactions, 11:33198 (R;US)
Precompound-Nucleus Emission
Pre-equilibrium decay processes in energetic heavy ion reactions, 11:33198 (R;US)
Radiative Decay
Heavy-ion radiative capture, 11:33455 (BA;US)
Relativistic Range
Relativistic heavy-ion collisions: Experiment, 11:33206 (BA;US)
Resonance
Heavy-ion resonances, 11:33204 (BA;US)
Statistical Models
The use of statistical models in heavy-ion reactions studies, 11:33207 (BA;US)
HEAVY LEPTONS
Mass
Mirror-lepton phenomenology in a left-right model with ultralight Dirac neutrinos, 11:33029 (J;US)
Particle Production
Mirror-lepton phenomenology in a left-right model with ultralight Dirac neutrinos, 11:33029 (J;US)
HEAVY MEDIA SEPARATION
Preliminary investigations into fine coal dense medium cyclone processing, 11:31355 (R;AU)
HEAVY NUCLEI
For nuclei from mass 181 upwards.

PHWR TYPE REACTORS
Burnable Poisons
Calculation of burnable poison in a cyclindrical cell of the TVR-M reactor fuel assembly, 11:31884 (R;SU;In Russian)
Power Distribution
Possibilities of power distribution smoothing in the modernized TVR-M heavy water reactor, 11:31883 (R;SU;In Russian)
HEAVY WATER MODERATOR
See HEAVY WATER
HEAVY WATER PLANTS
Cooling Systems
Corrosion inhibitors for carbon steel surfaces in contact with fresh water, 11:31614 (R;IN)
Corrosion Protection
Material compatibility studies for Heavy Water Project, Kota, 11:31613 (R;IN)
Water Chemistry
Corrosion inhibitors for carbon steel surfaces in contact with fresh water, 11:31614 (R;IN)
Material compatibility studies for Heavy Water Project, Kota, 11:31613 (R;IN)
HEISENBERG PICTURE
Real time quantum dynamics in the Heisenberg picture, 11:33258 (R;US)
HEISENBERG REPRESENTATION
See HEISENBERG PICTURE
HELICAL CONFIGURATION
Equilibrium
Toroidal heliac equilibrium, 11:33349 (J;AT)
HELIUM
Atom-Molecule Collisions
Coupled-channel study of rotational excitation of an electronically excited diatomic molecule by atom impact: He(^{1}S)+H_2 (B $^1\Sigma^+$/sub u/), 11:32950 (J;US)
Corrosive Effects
Tritium-helium effects in metals, 11:33436 (J;US)
Diffusion
Helium release from metals with face-centered cubic structure, 11:33217 (RA;BR;In Portuguese)
Tritium-helium effects in metals, 11:33436 (J;US)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
Supply and Demand
Non-ending helium story, 11:32403 (R;US)
HELIUM 3
Bubble Growth
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
Effective Mass
Microscopic calculations of the excitation spectrum of one ^{3}He impurity in liquid ^{4}He, 11:32973 (J;US)
Relaxation Time
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
HELIUM 3 REACTIONS
Breakup Reactions
Break up of light ions in the nuclear and Coulomb field of nuclei, 11:33193 (R;DE)
HELIUM 3 TARGET
Breakup Reactions
Deep inelastic electron scattering on light nuclei, 11:33100 (R;FR)
Electron Reactions
Deep inelastic electron scattering on light nuclei, 11:33100 (R;FR)
What can be learned from coincidence experiments from nuclei, 11:33175 (R;FR)
Pion Plus Reactions
Inclusive scattering of pions from very light nuclei at 100 MeV, 11:33101 (RA;US)
Pion Reactions
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
HELIUM 4
Impurities
Microscopic calculations of the excitation spectrum of one ^{3}He impurity in liquid ^{4}He, 11:32973 (J;US)
HELIUM 4 REACTIONS
See ALPHA REACTIONS
HELIUM 4 TARGET
Pion Minus Reactions
Inclusive production of protons with energies of 80-240 MeV in the pHe^4 - and π^- He^4 interactions, 11:33102 (R;SU;In Russian)
Pion Plus Reactions
Inclusive scattering of pions from very light nuclei at 100 MeV, 11:33101 (RA;US)
Proton Reactions
Inclusive production of protons with energies of 80-240 MeV in the pHe^4 - and π^- He^4 interactions, 11:33102 (R;SU;In Russian)
HELIUM COMPOUNDS
Chemical Reaction Kinetics
Unimolecular reactions and phase space bottlenecks, 11:32349 (J;US)
Decomposition
Unimolecular reactions and phase space bottlenecks, 11:32349 (J;US)
Iodides
Unimolecular reactions and phase space bottlenecks, 11:32349 (J;US)
HELIUM IONS
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities, 11:32937 (R;FR;In French)
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
HELIUM METHOD
See ISOTOPE DATING
HEMATITE
Catalytic Effects
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)

Porosity
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)

HEMICELLULOSE
Acid Hydrolysis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)
Anaerobic Digestion
Anaerobic digestion of hemicellulosic feedstocks, 11:31635 (RA;US)
Enzymatic Hydrolysis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)

HEPTANE
Bulk Density
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Enthalpy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)

HETEROCYCLIC COMPOUNDS
See also DIOXIN
POLYCYCLIC SULFUR HETEROCYCLES
THIONAPHTHENES
THIOPHENE
Catalytic Effects
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)
Hydrogenation
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)

HEXADECANE
Bulk Density
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Enthalpy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)

HEXANE
Bulk Density
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Electron Mobility
Effect of temperature and pressure on excess electron mobility in n-hexane, 2,2,4-trimethylpentane, and tetramethylsilane, 11:32350 (J;US)
Enthalpy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)

HFBR REACTOR
Safety
Seismic upgrading of the Brookhaven High Flux Beam Research Reactor, 11:32491 (RA;US)

HIGGS BOSONS
Mass
Higgs mass in Salam-Weinberg theory, 11:33034 (BA;US)
Rest Mass
Monte Carlo study of the standard SU(2) Higgs model, 11:33002 (R;DE)

HIGGS MODEL
Tricritical ratio of length scales in D = 4 Abelian Higgs model, 11:33083 (J;US)
Lattice Field Theory
Monte Carlo study of the standard SU(2) Higgs model, 11:33002 (R;DE)

HIGH ENERGY PHYSICS
Use only for articles of a very broad nature such as an annual research program, etc.
JINR rapid communications. Collection, 11:32979 (R;SU)
JINR rapid communications. Collection, 11:32978 (R;SU;In Russian)
Meetings
Proceedings of the 6. International seminar on high energy physics and quantum field theory. Vol. 2, 11:32976 (R;SU;In Russian)
Proceedings of the 7. Seminar on problems of high energy physics and quantum field theory. Vol. 1, 11:32977 (R;SU;In Russian)

HIGH ENERGY RADIOTHERAPY
See RADIOTHERAPY

HIGH EXPLOSIVES
See CHEMICAL EXPLOSIVES

HIGH TEMPERATURE GAS COOLED AND GRAPHITE
See HTGR TYPE REACTORS

HIGH-LEVEL RADIOACTIVE WASTES
By-Products
Method for extracting lanthanides and actinides from acid solutions, 11:31546 (P;US)
Chemical Analysis
Sampling and analysis of high-level waste at West Valley, 11:31574 (BA;US)
Containers
Design of a nuclear waste package for emplacement in tuff, 11:31579 (BA;US)
Geologic Deposits
Feasibility studies for a radioactive waste repository in a deep clay formation, 11:31511 (R;FR)
Marine Disposal
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Radioactive Waste Disposal
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)
Distribution of glacial erratics in the Northeast Atlantic. Final report, 11:31513 (R;GB)
Evaluation of commercial repository capacity for the disposal of defense high-level waste (Defense waste), 11:31497 (R;US)
Natural convection experiments about a finite-length cylindrical heat source in a liquid-saturated porous medium, 11:31548 (B;US)
Salt pressures on defense high-level waste packages, 11:31549 (BA;US)
The WIPP research and development program: providing the technical basis for defense waste disposal, 11:31577 (BA;US)
Radioactive Waste Processing
High-level radioactive insoluble waste preparation for vitrification, 11:31563 (BA;US)
Technetium removal processes for soluble defense high-level waste, 11:31564 (BA;US)
Radioactive Waste Storage
Porous glass with high silica content for nuclear waste storage: preparation, characterization and leaching, 11:31512 (RA;BR;In Portuguese)
Sampling
Sampling and analysis of high-level waste at West Valley, 11:31574 (BA;US)
Underground Disposal
Distribution of glacial erratics in the Northeast Atlantic. Final report, 11:31513 (R;GB)
Feasibility studies for a radioactive waste repository in a deep clay formation, 11:31511 (R;FR)
Vitrification
High-level radioactive insoluble waste preparation for vitrification, 11:31563 (BA;US)

HO2
See HYDROPEROXY RADICALS

HOLMIUM
Catalytic Effects
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)

X-Ray Spectra
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
HOLMIUM 165 TARGET
Carbon 12 Reactions
Ho target fragmentation induced by intermediate energy ^{12}C and ^{16}O, 11:33149 (RA;US)
Oxygen 16 Reactions
Ho target fragmentation induced by intermediate energy ^{12}C and ^{16}O, 11:33149 (RA;US)
HOLOGRAPHY
X-ray biomicroholography, 11:32839 (J;US)
HOT CELLS
Decommissioning
Analytical cell decontamination and shielding window refurbishment. Final report, March 1984-March 1985, 11:31498 (R;US)
Decontamination and decommissioning of Extraction Cell 3 at the West Valley Demonstration Project. Topical report, January 1982-April 1985, 11:31500 (R;US)
Decontamination
Analytical cell decontamination and shielding window refurbishment. Final report, March 1984-March 1985, 11:31498 (R;US)
Decontamination and decommissioning of Extraction Cell 3 at the West Valley Demonstration Project. Topical report, January 1982-April 1985, 11:31500 (R;US)
HOT PLASMA
Electromagnetic Radiation
Electromagnetic hot plasma modes in a dense plasma near the second harmonic electron-cyclotron frequency, 11:33333 (J;US)
Emission Spectra
Study of emission process in hot, optically thin plasma: application to solar active regions, 11:32916 (R;FR;In French)
Oscillation Modes
Heating of electrons in a high density Tokamak by a microwave near second harmonic frequency, 11:33378 (J;US)
Population Inversion
Theoretical study of atomic structure of $Z<40$ elements, ionic excited state populations in a hot plasma and population inversions, 11:33299 (R;FR;In French)
Pressure Effects
Reiterated inclusions of dipoles in a dense plasma, 11:33298 (R;FR;In French)
Resonance Absorption
Resonant absorption in a exponential electronic density gradient, 11:33300 (R;FR;In French)
HOT WATER HEATERS
See WATER HEATERS
HOT WIRE ANEMOMETERS
Performance
Microprocessors based hot wire anemometry system for measuring convection air movement within the CSU Class A passive solar test facility, 11:31739 (RA;US)
HOT-DRY-ROCK SYSTEMS
Hydraulic Fracturing
The sizing of a hot dry rock reservoir from a hydraulic fracturing experiment, 11:31768 (BA;US)
Sizing
The sizing of a hot dry rock reservoir from a hydraulic fracturing experiment, 11:31768 (BA;US)
HOUSES
Air Infiltration
Experimental protocol and preliminary results of air infiltration rate measurements in Tennessee Valley homes, 11:32709 (R;US)
Energy Efficiency
Residential applications of energy rating systems, 11:32080 (J;US)
Indoor Air Pollution
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
Marketers
Evaluation of the income required to qualify for an energy efficient home mortgage, 11:32044 (RA;US)
Sales
Evaluation of the income required to qualify for an energy efficient home mortgage, 11:32044 (RA;US)
Thermal Insulation
Insulated siding. Quarterly technical progress report (Insulated vinyl siding), 11:32066 (R;US)
Wood Burning Appliances
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
HTGR TYPE REACTORS
Reactor Operation
Licensed operating reactors. Status summary report data as of January 31, 1986. Volume 10, No. 2, 11:31803 (R;US)
Reactor Safety
Dynamics and inherent safety features of small modular high temperature gas-cooled reactors, 11:31893 (R;US)
HTO
See HEAVY WATER
TRITIUM COMPOUNDS
HUGENHOLTZ-PINES THEORY
See HYDROGEN
HUMAN CELLS
See ANIMAL CELLS
HUMAN POPULATIONS
See also MINORITY GROUPS
Radiation Doses
Methodology for evaluating radiological consequences of the management of very low-level solide waste arising from decommissioning of nuclear power plants, 11:31510 (R;FR)
Radiation Hazards
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
HUMANS
See HUMAN POPULATIONS
HURRICANES
Hazards
Performance of structures during Hurricane Alicia and the Altus Tornado, 11:32500 (RA;US)
HYBRID REACTORS
Cost Estimation
Cost of processing fuel from a molten salt, fusion/fission, hybrid reactor blanket, 11:33428 (J;US)
HYDRATED ELECTRONS
See SOLVATED ELECTRONS
HYDRAULIC FRACTURES
Acoustic Monitoring
A comprehensive fracture diagnostics experiment: Part II - comparison of seven fracture azimuth measurements, 11:31400 (BA;US)
Computerized Simulation
A model of the hydraulic fracturing process for elongated vertical fractures and comparisons of results with other models, 11:31399 (BA;US)
An improved model for fluid-driven cracks in jointed rock, 11:31459 (BA;US)
Fracture Mechanics
A model of the hydraulic fracturing process for elongated vertical fractures and comparisons of results with other models, 11:31399 (BA;US)
Determination of rock mass deformation modulus during hydraulic fracturing, 11:32890 (BA;US)
Hydraulic-fracture growth in dipping anisotropic strata as viewed through the surface deformation field, 11:31550 (BA;US)
The sizing of a hot dry rock reservoir from a hydraulic fracturing experiment, 11:31768 (BA;US)
Height
Multiwell experiment: fracture diagnostics, 11:31455 (RA;US)
Inspection
Measurement of dynamic reservoir conditions, 11:31443 (RA;US)
Length
Multiwell experiment: fracture diagnostics, 11:31455 (RA;US)

Orientation
A comprehensive fracture diagnostics experiment: Part II - comparison of seven fracture azimuth measurements, 11:31400 (BA;US)
In-situ stress state in the mounds test well as determined by the anelastic strain recovery method, 11:31401 (BA;US)
Multiwell experiment: fracture diagnostics, 11:31455 (RA;US)
Rock Mechanics
Determination of rock mass deformation modulus during hydraulic fracturing, 11:32890 (BA;US)
Width
Multiwell experiment: fracture diagnostics, 11:31455 (RA;US)

HYDRAULIC FRACTURING
Acoustic Monitoring
Seismic monitoring of hydraulic fracturing: techniques for determining fluid flow paths and state of stress away from a wellbore, 11:32881 (R;US)
Computerized Simulation
Coalbed methane stimulation analysis, 11:31444 (RA;US)
LLNL unconventional gas/western sands research, 11:31447 (RA;US)
Stimulation model for lenticular sands, 11:31448 (RA;US)
Western gas sands systems analysis, 11:31449 (RA;US)
Fracture Mechanics
Analysis of fracturing mechanisms in naturally fractured rocks, 11:31438 (RA;US)
Mineback stimulation research experiments, 11:31451 (RA;US)
Mathematical Models
Mineback stimulation research experiments, 11:31451 (RA;US)
Research Programs
Analysis of fracturing mechanisms in naturally fractured rocks, 11:31438 (RA;US)
Stresses
Demonstration of hydraulic fracturing stress measurement techniques, 11:31352 (R;AU)

HYDRAULICS
T Codes
TRAC-PF1/MOD 1 independent assessment. Condensation in stratified cocurrent flow, 11:31947 (R;US)
TRAC-PF1/MOD1 independent assessment. LOBI intermediate break test B-R1M, 11:31946 (R;US)

HYDRAZINE
Air Pollution
Infrared laser long-path measurement of pollutant gas concentrations, 11:32735 (BA;US)
Oxidation
Infrared laser long-path measurement of pollutant gas concentrations, 11:32735 (BA;US)

HYDRIDES
See also *POTASSIUM HYDRIDES*
SILANES
URANIUM HYDRIDES
VANADIUM HYDRIDES
Adsorption
Effects of calcination on adsorption and CO hydrogenation activity/selectivity of potassium-promoted Fe/SiO_2, 11:32352 (B;US)
Chemisorption
Use of metal hydrides for handling tritium, 11:33425 (J;US)

HYDROCARBONS
See also *ALKANES*
ALKENES
ANTHRACENE
BENZANTHRACENE
BENZENE
NAPHTHALENE
POLYCYCLIC AROMATIC HYDROCARBONS
TETRALIN
Electron Mobility
Effect of temperature and pressure on excess electron mobility in n-hexane, 2,2,4-trimethylpentane, and tetramethylsilane, 11:32350 (J;US)
Fischer-Tropsch Synthesis
Fischer-Tropsch synthesis of hydrocarbons in the gasoil range. Final report, 11:31650 (R;DE)
Gas Chromatography
Improved catalysts for liquid hydrocarbon fuels from syngas. Fifth quarterly technical progress report, October-December 1985, 11:31649 (R;US)

HYDROCHLORIC ACID
Atom-Molecule Collisions
Reactive scattering of Na(3 $^2P_3$/sub //$_2$)+HCl, 11:32951 (J;US)

HYDRODYNAMICS
See also *MAGNETOHYDRODYNAMICS*
Partial Differential Equations
Comparison of different numerical schemes for integration of hydrodynamic equations with Lagrange coordinates, 11:33250 (R;FR;In French)
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
Some high resolution numerical schemes for hydrodynamic equation integration, 11:33248 (R;FR;In French)

HYDROELECTRIC POWER PLANTS
Cumulative impacts: real or imagined, 11:31980 (R;US)

HYDROFLUORIC ACID
Accidents
Hazardous materials accident report - anhydrous hydrogen fluoride release from NATX 9408, Train No. BNEI3Y at Conrail's Receiving Yard, Elkhart, Indiana, February 4, 1985, 11:31986 (R;US)

HYDROGEN
Atom-Molecule Collisions
Coupled-channel study of rotational excitation of an electronically excited diatomic molecule by atom impact: He(^{1}S)+H_2 (B $^1\Sigma^+$/sub u/), 11:32950 (J;US)
Chemical Reaction Kinetics
Role of the radical pool in combustion, 11:32399 (R;US)
Chemical Reactions
[Studies of chemical reactions in solid matrices]. Final report, December 1,, 1979-November 30, 1984, 11:32378 (R;US)
Interpretation of equilibrium exchange rates for nonelementary reactions, 11:32355 (J;US)
Chemisorption
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
Consumption Rates
Use of non-coal-derived heavy solvents in direct liquefaction of Wyodak coal (Coprocessing with six heavy oils), 11:31308 (RA;US)
Diffusion
Determination of the energetic and technical most favourable method for removing hydrogen from slabs and plates, 11:32156 (R;DE;In German)
Time-resolved optical-pumping study of hydrogen discharges, 11:32953 (J;US)
Dissociation
Time-resolved optical-pumping study of hydrogen discharges, 11:32953 (J;US)
Electric Discharges
Time-resolved optical-pumping study of hydrogen discharges, 11:32953 (J;US)
Electron-Molecule Collisions
Theory of initial yields of ions generated by electrons in binary mixtures, 11:32947 (J;US)
G Value
Gamma and alpha radiolysis of salt brines, 11:32310 (BA;US)
Gas Production Rates
Interaction of polyethylene and tritium gas as monitored by raman spectroscopy, 11:33438 (J;US)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
Optical Pumping
Time-resolved optical-pumping study of hydrogen discharges, 11:32953 (J;US)
Phase Studies
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Raman Effect
Angular spectrum of the 88% efficient Raman generator, 11:32965 (BA;US)

Recombination
Measurement of the hydrogen recombination coefficient in the TEXT tokamak as a function of outgassing and power radiated during tokamak discharges, 11:33291 (R;US)
Relaxation Time
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
Removal
Determination of the energetic and technical most favourable method for removing hydrogen from slabs and plates, 11:32156 (R;DE;In German)
Solubility
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)
Stark Effect
Ac Stark splitting in multiphoton excitation of atomic hydrogen in flames: Abnormal peak asymmetry due to pressure broadening, 11:32954 (J;US)
Thermodynamic Properties
Thermodynamic properties of real and synthetic fluid mixtures derived from fossil substances. Phase behavior study of hydrogen and 450-950°F coal liquid from a coal liquefaction unit at Wilsonville, Alabama, 11:31336 (R;US)

HYDROGEN 1
Distillation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Isotope Separation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)

HYDROGEN 2
See DEUTERIUM

HYDROGEN 3
See TRITIUM

HYDROGEN CHLORIDES
See HYDROCHLORIC ACID

HYDROGEN COOLED REACTORS
See also NERVA REACTOR
Design
Gas cooled reactor concepts for space applications, 11:31856 (BA;US)

HYDROGEN FLUORIDES
See HYDROFLUORIC ACID

HYDROGEN HYDROXIDES
See WATER

HYDROGEN IONS
See also HYDROGEN IONS 1 MINUS
HYDROGEN IONS 1 PLUS
HYDROGEN IONS 2 PLUS
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)

HYDROGEN IONS 1 MINUS
For H_1^- ions.
Acceleration
BNL RFQ, 11:32543 (J;US)
Beam Currents
Development of a multicusp H^- ion source for accelerator applications, 11:32583 (J;US)
Beam Emittance
Development of a multicusp H^- ion source for accelerator applications, 11:32583 (J;US)
Operating experience with a 100-keV, 100-mA H^- injector, 11:32585 (J;US)
Ion Sources
Development of a multicusp H^- ion source for accelerator applications, 11:32583 (J;US)
Optically pumped polarized H^- ion source, 11:32584 (J;US)
Spin Orientation
Optically pumped polarized H^- ion source, 11:32584 (J;US)

HYDROGEN IONS 1 PLUS
For H_1^+ ions.
Ion-Atom Collisions
Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities, 11:32937 (R;FR;In French)
Large-angle scattering and nuclear-resonance effect in electron capture in $H^+ + C$ and $N^+ + N$ collisions, 11:32929 (R;FR)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)

HYDROGEN IONS 2 PLUS
For H_2^+ ions.
Ion-Atom Collisions
Interaction of light ion (E approximately 1 MeV/u) with thin foil targets: study of convoy electrons in the directions of emerging ions, at similar velocities, 11:32937 (R;FR;In French)

HYDROGEN ISOTOPES
See also DEUTERIUM
HYDROGEN 1
TRITIUM
Distillation
Cryogenic hydrogen isotope distillation for the fusion fuel cycle, 11:33430 (J;US)
Isotope Separation
Cryogenic hydrogen isotope distillation for the fusion fuel cycle, 11:33430 (J;US)
Separation of hydrogen isotopes by thermal diffusion, 11:33435 (J;US)
Thermal Diffusion
Separation of hydrogen isotopes by thermal diffusion, 11:33435 (J;US)

HYDROGEN NITRATES
See NITRIC ACID

HYDROGEN PEROXIDE
Redox Reactions
Equilibrium studies and redox kinetics of the peroxo complex of zirconium(IV) in acidic perchlorate solution, 11:32343 (R;US)

HYDROGEN PRODUCTION
Gas evolution during oil shale pyrolysis. Part 1. Nonisothermal rate measurements, 11:31469 (J;GB)
Electrolysis
Photoelectrochemical reduction of carbon dioxide. Annual report, May 1984-April 1985, 11:32376 (R;US)

HYDROGEN SULFATES
See SULFURIC ACID

HYDROGEN SULFIDES
Corrosive Effects
New pipe steel test gets critical study, 11:31462 (J;US)

HYDROGENATION
Catalysts
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986 (With and without titanocene dichloride using Shell 324 or Shell 344 catalysts), 11:31310 (R;US)

HYDROPEROXY RADICALS
HO2
G Value
Gamma and alpha radiolysis of salt brines, 11:32310 (BA;US)

HYDROXY COMPOUNDS
For organic compounds only and excluding SACCHARIDES, GLYCOSIDES and HYDROXY ACIDS.
See also ALCOHOLS
ESTRIOL
Gas Chromatography
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
Mass Spectroscopy
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental

funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)

HYDROXYBENZENE
See PHENOL

HYDROXYL IONS
See ANIONS

HYDROXYL RADICALS
Chemical Reaction Kinetics
Nonstatistical effects and detailed balance in quasiclassical trajectory calculations of the thermal rate coefficient for $O+OH \rightarrow O_2+H$, 11:32348 (J;US)
G Value
Gamma and alpha radiolysis of salt brines, 11:32310 (BA;US)

HYSTERESIS
Mathematical Models
Mathematical models of hysteresis, 11:33289 (J;US)

I

ICE
Penetrators
Arctic ice: as viewed by the designer of ice penetrators, 11:32406 (R;US)
Kinematic model of ice penetration with lateral loading, 11:32429 (R;US)

ICR HEATING
Antennas
3-D analysis on arbitrarily-shaped ICRF antennas and Faraday shields, 11:33394 (R;US)
Final report for TMX-U systems support, 11:33411 (R;US)
Heating, current drive and transport properties of large area ICRF couplers, 11:33444 (J;US)
ICRF antenna and feedthrough development at the Oak Ridge National Laboratory, 11:33443 (J;US)
Bernstein Mode
Role of ion Bernstein waves in ICRF experiments, 11:33365 (J;US)

IDAHO
Earthquakes
1983 Borah Peak, Idaho earthquake - a review of seismicity, surface faulting and regional tectonics, 11:32874 (RA;US)
Strong ground motion data from the 1983 Borah Peak, Idaho earthquake recorded at the Idaho National Engineering Laboratory, 11:32877 (RA;US)

IDAHO NATIONAL ENGINEERING LABORATORY
Prior to 1976 known as NRTS and older material is so indexed.
Safety
Structural performance of the DOE's Idaho National Engineering Laboratory during the 1983 Borah Peak Earthquake, 11:32498 (RA;US)

IEAR-1 REACTOR
Reactor Cores
Application of TEMPPC code to the IEA-R1 nuclear reactor core hydrothermal calculations operating at 2 MW for determining the minimal coolant flow, 11:31882 (R;BR;In Portuguese)

IGNEOUS ROCKS
See also PLUTONIC ROCKS
VOLCANIC ROCKS
Age Estimation
Rubidium-strontium geochronologic systematics in igneous contact zones: analog for ^{90}Sr and ^{137}Cs behavior in the near field, 11:32872 (BA;US)

IGNITION SYSTEMS
Schlieren Method
A photographic study of plasma ignition systems, 11:32122 (B;US)

ILLUMINATION SYSTEMS

INCOLOY 800H
Corrosion Products
Spectrometric and metallographic examinations of corrosion and precipitation products of high temperature alloys, 11:32194 (R;DE;In German)
Fracture Properties
J-integral flaw resistance curves of Incoloy 800H at room temperature. Tests within the frame of round robin tests, 11:32176 (R;CH;In German)
Mechanical Tests
J-integral flaw resistance curves of Incoloy 800H at room temperature. Tests within the frame of round robin tests, 11:32176 (R;CH;In German)

INCOMPRESSIBLE FLOW
Research on turbine flowfield analysis methods. Final report, 1 April 1983-30 November 1984, 11:32462 (R;US)

INCONEL 617
Corrosion Products
Spectrometric and metallographic examinations of corrosion and precipitation products of high temperature alloys, 11:32194 (R;DE;In German)

INCONEL 690
Corrosion
Evaluation of materials performance in a large-scale glass melter after two years of vitrifying simulated SRP defense waste, 11:31566 (BA;US)

INDIA
Nuclear Energy
Annual report 1984-1985 [of the Department of Atomic Energy, of the Government of India], 11:31999 (R;IN)
Nuclear Power Plants
Annual report 1984-1985 [of the Department of Atomic Energy, of the Government of India], 11:31999 (R;IN)

INDIUM OXIDES
Magnetoresistance
Anisotropic magnetoresistance in a Fermi glass, 11:32239 (J;US)

INDIUM SELENIDE SOLAR CELLS
Fabrication
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)
Health Hazards
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)

INDOLES
Gas Chromatography
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
Mass Spectroscopy
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental

funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)

INDOOR AIR POLLUTION
Evaluation of indoor aerosol control devices and their effects on radon progeny concentrations. Revision, 11:32713 (R;US)
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
Air Pollution Monitoring
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)

INDUCTION FURNACES
Energy Consumption
Induction melting of metals: state-of-the-art assessment. Final report, 11:32180 (R;US)

Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Phase Diagrams
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
IRON-FREE SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
IRRADIATION DEVICES
License Applications
16 July 1985: Royal Order amending the Royal Order of 24 April 1964 on approval of a certain type of apparatus containing radioactive substances, made in implementation of Section 3.1.d/2 of the Royal Order of 28 February 1963 enacting General Regulations for Protection of the Population and Workers against the Hazards of Ionizing Radiation, 11:31615 (R;BE;In French and Dutch)
IRRADIATION RIGS
See IRRADIATION DEVICES
ISING MODEL
Algorithms
Deterministic Ising dynamics, 11:33281 (J;US)
Computerized Simulation
Lattices, demons and the microcanonical ensemble, 11:33087 (BA;US)
Monte Carlo Method
Tests for Monte Carlo renormalization studies on Ising models, 11:33282 (J;US)
Phase Diagrams
Enhancement of surface magnetism due to bulk bond dilution, 11:33235 (R;BR)
Renormalization
Tests for Monte Carlo renormalization studies on Ising models, 11:33282 (J;US)
ISOBARS (NUCLEON)
*See N*RESONANCES*
ISOTOPE DATING
Errors
Potassium-argon age calculations. A revised evaluation of analytical errors, 11:33469 (R;NZ)
ISOTOPE SEPARATION PLANTS
See also HEAVY WATER PLANTS
TRITIUM EXTRACTION PLANT

Distillation Equipment
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Cryogenic hydrogen isotope distillation for the fusion fuel cycle, 11:33430 (J;US)
ISX TOKAMAK
Research Programs
Fusion Energy Division Annual Information Meeting. Agenda and abstracts, April 8-9, 1986, 11:33408 (R;US)
ITALY
Coordinated Research Programs
Joint research and development and exchange of technology on toxic material emergency response between LLNL and ENEA. 1985 progress report, 11:31607 (R;US)
Radiation Protection
Long-term environmental risk estimation, 11:32844 (R;IT)
IVORY COAST
Energy Supplies
Ivory Coast - energy situation 1984, 11:32007 (R;DE;In German)

J

JAILS
See PUBLIC BUILDINGS
JAPAN
Research Programs
Reports of the University of Electro-Communications, volume 36, no. 1, September 1985 (serial no. 58), 11:32792 (J;JP)
Seismology
Ground motions by microtremor and earthquake observations in relation to damages of the Central Japan Sea Earthquake (M = 7.7), May 26, 1983, 11:32875 (RA;US)
JET ENGINE FUELS
Gums
Oxidation and gum formation in diesel fuels. Interim technical report, May-December 1985, 11:31404 (R;US)
Production
Refining of coal oils to produce transport fuels and feedstocks, 11:31318 (R;XE)
JET REACTORS
See JET TOKAMAK
JET TOKAMAK
Mesh Generation
MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET, 11:33310 (R;GB)
MHD Equilibrium
MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET, 11:33310 (R;GB)
JETS
Multiple Production
Upper limit for two-jet production in direct Y(1S) decays, 11:32981 (R;DE)
JOINTS
Mechanical joints only, not for BONE JOINTS.
See also WELDED JOINTS
Design
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint, 11:31840 (R;US)
Evaluation
Tape joint stiffness, 11:32427 (R;US)
Testing
Tape joint stiffness, 11:32427 (R;US)
Two-Dimensional Calculations
Two-dimensional continuum model for jointed media with orthogonal sets of joints, 11:32405 (R;US)
JOSEPHSON EFFECT
Josephson oscillations of charge density waves, 11:33245 (R;US)

K

K02
See KAONS NEUTRAL LONG-LIVED
K-25 PLANT

Particle Production
Quark (diquark) fragmentation in soft $\pi p p$ interactions at P=40 GeV/c, 11:32987 (R;SU)
KAONS NEUTRAL LONG-LIVED
Leptonic Decay
Flavor-changing Yukawa coupling in the standard model and muon polarization in K/sub L/→μmu-bar, 11:33033 (J;US)
KELP
See SEAWEEDS
KENTUCKY
Oil Shale Deposits
DOE Oil Shale Reference Sample Bank. Quarterly reports, October-December 1985; January-March 1986, 11:31465 (R;US)
KENYA
Energy Policy
Kenya - energy situation 1984, 11:31976 (R;DE;In German)
Energy Supplies
Kenya - energy situation 1984, 11:31976 (R;DE;In German)
KETONES
See also METHYL ISOBUTYL KETONE
Biosynthesis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)
KETOPROPIONIC ACID-ALPHA
See PYRUVIC ACID
KEVLAR
See ARAMIDS
KINK INSTABILITY
Stabilization
Ion viscosity stabilization of resistive internal kink modes, 11:33331 (J;US)
KLEIN-NISHINA FORMULA
Analytical Solution
A simple method for computing the relativistic Compton scattering kernel for radiative transfer, 11:33026 (J;US)
KNOCK-ON ELECTRONS
See ELECTRONS
K*RESONANCES
Particle Production
Meson resonance production in the parton model with account for transverse quark motion, 11:33016 (RA;SU;In Russian)
KRYPTON
Adsorption
Electron microscopy and krypton adsorption characterization of high-purity MgO powder, 11:32275 (J;US)
KRYPTON 86 REACTIONS
Spallation
Effect of particle evaporation in the $^{136}Xe + {}^{86}Fe$ reaction and a reinvestigation of the $^{86}Kr + {}^{92}Mo$ system, 11:33130 (RA;US)
KRYPTON FLUORIDES
Chemical Reactions
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
KRYPTON IONS
Electron-Ion Collisions
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
Lifetime
Relativistic two-photon emission: Lifetime of the 2 $^1S_0$ state of helium-like Kr^{34+}, 11:32958 (J;US)

Multi-Photon Processes
Relativistic two-photon emission: Lifetime of the 2 $^1S_0$ state of helium-like Kr^{34+}, 11:32958 (J;US)
Population Inversion
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
X-Ray Spectra
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)

L

LA REINA REACTOR
See RESEARCH REACTORS
LABORATORIES
Certification
AAPM accredited dosimetry calibration laboratories, 11:32625 (RA;US)
Concept of secondary laboratories, 11:32608 (RA;US)
Implementation of CRCPD accreditation criteria in state calibration laboratories, 11:32626 (RA;US)
Secondary standards laboratories for ionizing radiation calibrations: the national laboratory interests, 11:32629 (RA;US)
US Nuclear Regulatory Commission interests in secondary laboratories, 11:32628 (RA;US)
Quality Assurance
Secondary standards laboratories: an overview, 11:32624 (RA;US)
LAKES
Acidification
Chemical composition of precipitation and watershed samples collected at Deep Creek Lake, Garrett County, Maryland. Final report, 11:32783 (R;US)
Water resource baseline data and assessment of impacts from acidic precipitation, Acadia National Park, Maine. Technical report (Final), 11:32784 (R;US)
LAMBDA NEUTRAL
See LAMBDA PARTICLES
LAMBDA PARTICLES
Particle Production
A production in e^+e^- annihilations at 29 GeV: comparison with Lund-model predictions, 11:32993 (J;US)
Model of hadron elastic scattering and diffraction dissociation processes at high energies, 11:33008 (RA;SU;In Russian)
Quark (diquark) fragmentation in soft π^-p interactions at P=40 GeV/c, 11:32987 (R;SU)
LAMPF II SYNCHROTRON
Neutron Flux
Additional measurements of the radiation environment at the Los Alamos Spallation Radiation Effects Facility at LAMPF, 11:32576 (R;US)
LAND APPLICATION
See GROUND DISPOSAL
LAND FILLS
See SANITARY LANDFILLS
LANDFILLS

LANTHANIDES
See RARE EARTHS
LANTHANUM 139 TARGET
Uranium 238 Reactions
La target fragmentation induced by high energy La and U ions, 11:33143 (RA;US)
LANTHANUM ALLOYS
Hydridation
Use of metal hydrides for handling tritium, 11:33425 (J;US)
Sorptive Properties
Long-term behavior of the tritides formed by nickel-based intermetallic compounds, 11:33426 (J;US)
LANTHANUM COMPOUNDS
Elasticity
Elastic properties of $LaNbO_4$, 11:32251 (R;US)
Ultrasonic Waves
Elastic properties of $LaNbO_4$, 11:32251 (R;US)
LARGE COIL PROGRAM
Research Programs
Fusion Energy Division Annual Information Meeting. Agenda and abstracts, April 8-9, 1986, 11:33408 (R;US)
LASER CAVITIES
Ion Beam Injection
Photodetachment technology, 11:32587 (J;US)
LASER RADIATION
Attenuation
Integrating box for laser-plasma reflectivity studies, 11:33222 (R;DE)
LASER SPECTROSCOPY
Laser optical pumping in nuclear physics: fission isomers, oriented targets, and hyperfine pumping in single-electron atoms, 11:32961 (J;NL)
LASER TARGETS
Reflectivity
Integrating box for laser-plasma reflectivity studies, 11:33222 (R;DE)
LASER-PRODUCED PLASMA
Aluminium Ions
Theoretical study of atomic structure of Z<40 elements, ionic excited state populations in a hot plasma and population inversions, 11:33299 (R;FR;In French)
Electron Cooling
Model for electron cooling by radiation losses in plasmas: Application to development of soft x-ray lasers, 11:32456 (J;US)
Plasma Diagnostics
Wave-mixing from unexpected atomic transitions in laser generated plasma, 11:33389 (BA;US)
Reflectivity
Integrating box for laser-plasma reflectivity studies, 11:33222 (R;DE)
Soft X Radiation
Model for electron cooling by radiation losses in plasmas: Application to development of soft x-ray lasers, 11:32456 (J;US)
Ultraviolet Radiation
Wave-mixing from unexpected atomic transitions in laser generated plasma, 11:33389 (BA;US)
X Radiation
Studies on production of metastable core-excited atoms by laser-produced x-rays. Final report, 1 October 1984-30 September 1985, 11:32453 (R;US)
X-Ray Spectroscopy
Theoretical study of atomic structure of Z<40 elements, ionic excited state populations in a hot plasma and population inversions, 11:33299 (R;FR;In French)
LASERS
Light Amplification by Stimulated Emission of Radiation.
See also CHEMICAL LASERS
FREE ELECTRON LASERS
GAS LASERS
RING LASERS
SEMICONDUCTOR LASERS
X-RAY LASERS
Electromagnetic Fields
Interacting collective modes in a laser cavity, 11:33265 (R;BR)
Fabrication
Nonlinear optical techniques for visible and uv lasers and thin film deposition. Final report, 1 October 1984-30 September 1985, 11:32443 (R;US)
Monitoring
YAG laser monitoring. Final report, 11:32449 (R;US)
Photonuclear Reactions
Adiabatic approach in the theory of polyatomic photodissociation: Application to C_2N_2, 11:32383 (BA;US)

Uses
Quest for ultrahigh energies, 11:32540 (J;US)
LASL
Fastbus System
A 32-bit FASTBUS computer, 11:33489 (J;US)
LATE RADIATION EFFECTS
See DELAYED RADIATION EFFECTS
LATTICE FIELD THEORY
Fermions
Updating fermions with the Lanczos method, 11:33048 (R;DE)
Gauge Invariance
Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study, 11:33074 (R;GB)
The spectrum in lattice gauge theories, 11:33086 (BA;US)
Topological susceptibility in SU(2) lattice gauge theory: an exploratory study, 11:33075 (R;GB)
Mass Spectra
The spectrum in lattice gauge theories, 11:33086 (BA;US)
Monte Carlo Method
Axial anomaly suppression (and axial U(1) symmetry restoration) at high temperatures: a lattice Monte Carlo study, 11:33074 (R;GB)
Phase Transformations
Dimensional reduction near a phase transition, 11:33080 (J;US)
Line of second order phase transitions in the 4-dimensional Z_6 gauge theory with matter fields, 11:33050 (R;DE)
Tricritical ratio of length scales in D = 4 Abelian Higgs model, 11:33083 (J;US)
Rest Mass
Algorithm for high order strong coupling expansions: The mass gap in 3d pure Z_6 lattice gauge theory, 11:33047 (R;DE)
SU Groups
Topological susceptibility in SU(2) lattice gauge theory: an exploratory study, 11:33075 (R;GB)
SU-2 Groups
SU(2) deconfinement temperature on a body-centered hypercubic lattice, 11:33079 (J;US)
Temperature Dependence
SU(2) deconfinement temperature on a body-centered hypercubic lattice, 11:33079 (J;US)
U-1 Groups
Tricritical ratio of length scales in D = 4 Abelian Higgs model, 11:33083 (J;US)
LATTICE PARAMETERS
Fourier Analysis
Equivalence between the methods involving Fourier series and the Poisson's summation formula and evaluation of a class of lattice sums in arbitrary dimensions, 11:33266 (R;BR)
LATTICES (REACTOR)
See REACTOR LATTICES
LAVA
Geochemistry
Petrology and geochemistry of Hawaiite lavas from Crater Flat, Nevada (NNWSI project), 11:32904 (J;DE)
Petrology
Petrology and geochemistry of Hawaiite lavas from Crater Flat, Nevada (NNWSI project), 11:32904 (J;DE)
LAWRENCE BERKELEY LABORATORY
Safety
Lawrence Berkeley Laboratory upgrading approaches to existing facilities, 11:32493 (RA;US)
Seismic Safety Guide, 11:32480 (RA;US)
LAWRENCE LIVERMORE LABORATORY
Coordinated Research Programs
Joint research and development and exchange of technology on toxic material emergency response between LLNL and ENEA. 1985 progress report, 11:31607 (R;US)
Research Programs
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Safety
Earthquake safety program at Lawrence Livermore National Laboratory, 11:32494 (RA;US)
Seismic considerations for suspended ceiling systems, 11:32503 (RA;US)
LEACHATES
Air Pollution Abatement
Leachate collection and gas migration and emission problems at landfills and surface impoundments. Final report, September 1983-March 1985, 11:32727 (R;US)
Chemical Composition
Chemical and microbiological analysis of Aveley Landfill, England, 11:31645 (RA;US)
LEAD
Alpha Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Carbon 12 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Catalytic Effects
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
Oxygen 16 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Photonuclear Reactions
Forward-to-backward asymmetries in the (γ,n) reactions around the E2 isovector giant resonance, 11:33153 (RA;US)
X-Ray Fluorescence Analysis
Determination of lead, zinc, and magnesium in dolomite and its benefication products by use of x-ray-fluorescence spectrometry, 11:32336 (R;ZA)
LEAD 206 TARGET
Photonuclear Reactions
Forward-to-backward asymmetries in the (γ,n) reactions around the E2 isovector giant resonance, 11:33153 (RA;US)
LEAD 208
Energy Levels
Nuclear data sheets for A = 208, 11:33160 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 208, 11:33160 (J;US)
Giant Resonance
Measurement of π^+/π^- cross section ratio for the giant quadrupole resonance in ^{208}Pb, 11:33159 (J;US)
LEAD 208 REACTIONS
Deep Inelastic Heavy Ion Reactions
Study of spin-spin correlations in deep inelastic collisions, 11:33161 (RA;US)
LEAD 208 TARGET
Antiproton Reactions
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Carbon 14 Reactions
Intermediate and weak coupling in ^{219}Ra, 11:33158 (J;US)
Pion Minus Reactions
Measurement of π^+/π^- cross section ratio for the giant quadrupole resonance in ^{208}Pb, 11:33159 (J;US)
Pion Plus Reactions
Measurement of π^+/π^- cross section ratio for the giant quadrupole resonance in ^{208}Pb, 11:33159 (J;US)
LEAD ALLOYS
Corrosive Effects
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
LEAD METHOD
See ISOTOPE DATING
LEAD OXIDES
Electric Potential
Solid ionization chamber, 11:32233 (R;BR;In Portuguese)
LEAD-FREE GASOLINE
See UNLEADED GASOLINE
LEASING
Constraints
Constraints to leasing and development of federal resources: OCS oil and gas and geothermal. Final report, 11:31764 (R;US)

LEAVES
Mass Transfer
Response of a hardwood forest to carbon dioxide and climate change. Final progress report, 11:32814 (R;US)
LEPTON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
LICHENS
Predator-Prey Interactions
Lichens and lepidopterons, 11:32753 (J;US)
LIGHT SOURCES
Regulations
SI 1985 No. 1047 - The Radioactive Substances (Gaseous Tritium Light Devices) Exemption Order 1985, 11:31616 (R;GB)
LIGHT WATER COOLED REACTORS

Lighting research program, 11:32086 (J;US)
LIGNITE
Ashes
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Calorific Value
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Combustion
Combustion of calcium treated coals, 11:31373 (B;US)
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments, 11:31341 (RA;US)
Consumption Rates
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Dissolution
Low temperature aqueous alkaline liquefaction of Texas lignite, 11:31306 (RA;US)
Drying
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
Fly Ash
Mineralogy of low rank coal fly ash, 11:31340 (RA;US)
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments, 11:31341 (RA;US)
Meetings
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
Production
ENDESA in the Spanish coal industry: Puentes Lignite Mine (Spain; 1973 to 1984), 11:31375 (RA;US)
Solvent Extraction
Charring principal isolated from two American lignites, 11:31307 (RA;US)
Structural Chemical Analysis
Low temperature aqueous alkaline liquefaction of Texas lignite, 11:31306 (RA;US)
LIMESTONE
Chemical Analysis
Methods of chemical analysis for selected species in marble and limestone surfaces exposed to the acidic outdoor environment, 11:32327 (R;US)
Corrosion
Methods of chemical analysis for selected species in marble and limestone surfaces exposed to the acidic outdoor environment, 11:32327 (R;US)
Sorptive Properties
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal. Report for September 1984-December 1985, 11:32726 (R;US)
Studies on the reaction of calcined limestone with sulfur dioxide. Technical progress report, January-March 1986, 11:31314 (R;US)
LIMITERS
Eddy Currents
Analysis of the FELIX experiments with cantilevered beams and hollow cylinders, 11:33399 (R;US)
LINACS
See LINEAR ACCELERATORS
LINEAR ACCELERATORS
Beam Transport
Beam dynamics for the UW booster project, 11:32569 (RA;US)
Construction
Construction of a high-energy linear accelerator for research in free-electron lasers, beam-wave interactions, spectroscopy, and microcircuitry fabrication. Final report, 1 August 1983-31 July 1984, 11:32556 (R;US)
Control Systems
Phase control system of the tandem-LINAC system, 11:32531 (RA;US)
Cryogenics
Booster cryogenics, 11:32572 (RA;US)
Design
Booster LINAC project: introduction, 11:32526 (RA;US)
Free-electron laser, 11:32537 (RA;US)
Electron Beam Injection
Improved brightness of the ATA injector, 11:33413 (J;US)
Gratings
Laser plasma LINAC, 11:33392 (BA;US)
LINEAR Z PINCH DEVICES
Magnetic Compression
Generation of high magnetic fields using a gas-puff Z pinch, 11:33336 (J;US)
Magnetic Fields
Generation of high magnetic fields using a gas-puff Z pinch, 11:33336 (J;US)
LINERS
Materials Testing
Corrosion behavior of carbon steels under tuff repository environmental conditions, 11:32225 (BA;US)
LIOUVILLE EQUATION
See BOLTZMANN-VLASOV EQUATION
LIPIDS
Metabolism
Lipid peroxidation model for halogenated hydrocarbon toxicity. Kinetics of peroxyl radical processes involving fatty acids and Fe(III) porhyrins, 11:32816 (J;NL)
LIQUID EFFLUENTS
See LIQUID WASTES
LIQUID METAL COOLED REACTORS
See also LMFBR TYPE REACTORS
Design
Evolution of systems concepts for a 100 kWe class space nuclear power system, 11:31854 (BA;US)
Liquid metal cooled reactors for space power applications, 11:31858 (BA;US)
Rockwell SR-100G reactor turboelectric space power system, 11:31855 (BA;US)
LIQUID METAL TEST FACILITIES
See TEST FACILITIES
LIQUID METAL-WATER REACTIONS
See MOLTEN METAL-WATER REACTIONS
LIQUID SCINTILLATION DETECTORS
Response Functions
Monte-Carlo calculation of the response function of the big scintillation detector for neutron capture detection, 11:32602 (R;SU;In Russian)
LIQUID WASTES
See also WASTE WATER
Anaerobic Digestion
Anaerobic SBR treatment of coal conversion wastewaters. Second quarterly report, 11:31313 (R;US)
Filtration
Managing vegetation on peat-sand filter beds for wastewater disposal. Forest Service research note, 11:32782 (R;US)

LIQUIDS
See also COAL LIQUIDS
NATURAL GAS LIQUIDS
Nucleation
Critical radius for nucleation, 11:33284 (R;US)
LITHIUM
Corrosive Effects
Influence of temperature and lithium purity on corrosion of ferrous alloys in a flowing lithium environment, 11:32167 (R;US)
Flame Photometry
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Flame photometric determination of Na, K and Li in uranium compounds, 11:32333 (R;BR;In Portuguese)
Leaching
Parametric testing of a DWPF borosilicate glass, 11:32300 (BA;US)
Nuclear Reaction Analysis
Neutron induced particle track mapping of elemental distributions, 11:32340 (R;US)
LITHIUM 6
Giant Resonance
Spin-dipole excitations of ^{6}Li in charged pion photoproduction, 11:33115 (R;SU)
LITHIUM 6 TARGET
Photonuclear Reactions
Spin-dipole excitations of ^{6}Li in charged pion photoproduction, 11:33115 (R;SU)
LITHIUM ALLOYS
Corrosive Effects
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
Electric Conductivity
Electrical-transport properties in the semimetallic compound LiGa, 11:32207 (J;US)
Electrochemical Cells
Overview of transport mechanisms in β-lithium/aluminum, 11:32170 (R;US)
Erosion
Recent results on the preparation and properties of Li-containing Cu alloys, 11:33397 (R;US)
Hall Effect
Electrical-transport properties in the semimetallic compound LiGa, 11:32207 (J;US)
Precipitation Hardening
Theory of strengthening by ordered precipitates, 11:32198 (R;US)
Sputtering
Recent results on the preparation and properties of Li-containing Cu alloys, 11:33397 (R;US)
LITHIUM COMPOUNDS
See also LITHIUM OXIDES
Crystal Doping
Ion beam processing of $LiNbO_3$, 11:32280 (J;US)
Ion Implantation
Ion beam processing of $LiNbO_3$, 11:32280 (J;US)
LITHIUM IONS
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
LITHIUM OXIDES
Thermal Conductivity
Thermal conductivity of mixed beryllia/Li ceramic in sphere-pac forms, 11:33396 (R;US)
Tritium Recovery
Release characteristics of tritium from high-purity lithium oxide, 11:33421 (J;US)
LMFBR TYPE REACTORS
Boilers
Analysis of limit cycling on a boiler feedwater control system, 11:31838 (R;GB)
Dynamic interactions between recirculation boilers connected in parallel, 11:31839 (R;GB)
Containment Systems
Aerosol behavior model validation procedure, 11:31940 (RA;US)
Experience on measurement methods for sodium fire aerosols, 11:31928 (RA;US)
Gravitational collision efficiency of LMFBR aerosols, 11:31918 (RA;US)
Physical rate processes in confined aerosols, 11:31917 (RA;US)
Crossflow Systems
Instability characteristics of fluidelastic instability of tube rows in crossflow, 11:31841 (R;US)
Economics
Integral Fast Reactor concept, 11:31842 (R;US)
Fire Hazards
Determination of sodium fire aerosol process coefficients from FAUNA-experiments, 11:31919 (RA;US)
Prediction of the rates of chemical transformation of sodium fire aerosols, 11:31924 (RA;US)
Winfrith studies related to nuclear aerosols and the fast reactor safety program, 11:31932 (RA;US)
Maintenance
Integral Fast Reactor concept, 11:31842 (R;US)
Mechanical Structures
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint, 11:31840 (R;US)
Meltdown
Aerosol source considerations for LMFBR core disruptive accidents, 11:31914 (RA;US)
Molten Metal-Water Reactions
Prediction of the rates of chemical transformation of sodium fire aerosols, 11:31924 (RA;US)
Nuclear Fuels
Summary of the Hot Fuel Examination Facility's Neutron Radiography Reactor's first eight years, 11:31843 (R;US)
Performance
Integral Fast Reactor concept, 11:31842 (R;US)
Primary Coolant Circuits
Experience on measurement methods for sodium fire aerosols, 11:31928 (RA;US)
Radioactive Aerosols
Boundary layer for diffusive aerosol deposition onto walls, 11:31922 (RA;US)
Experience on measurement methods for sodium fire aerosols, 11:31928 (RA;US)
Reactor Accidents
Aerosol behavior model validation procedure, 11:31940 (RA;US)
Morphology and aerodynamics of sodium oxide aerosol at low relative humidities, 11:31921 (RA;US)
Reactor Core Disruption
Aerosol release from a hot sodium pool and behavior in sodium vapor atmosphere, 11:31916 (RA;US)
Aerosol source considerations for LMFBR core disruptive accidents, 11:31914 (RA;US)
Approach to the nuclear aerosol source term assessment in an HCDA of LMFBR, 11:31915 (RA;US)
Determination of sodium fire aerosol process coefficients from FAUNA-experiments, 11:31919 (RA;US)
Development of interpolation formulae for rapid evaluation of the attenuation due to aerosol processes of radioactive release following hypothetical fast reactor accidents, 11:31938 (RA;US)
Direct measurement of the coagulation shape factor of aerosol particles, 11:31920 (RA;US)
Gravitational collision efficiency of LMFBR aerosols, 11:31918 (RA;US)
Physical rate processes in confined aerosols, 11:31917 (RA;US)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Winfrith studies related to nuclear aerosols and the fast reactor safety program, 11:31932 (RA;US)
Reactor Operation
Integral Fast Reactor concept, 11:31842 (R;US)
Safety
Integral Fast Reactor concept, 11:31842 (R;US)
LOADING MACHINES (REACTOR)
See REACTOR CHARGING MACHINES

LOBSTERS
Electrophysiology
Exogenous ecdysteroids elicit low-threshold sensory responses in spiny lobsters, 11:32804 (J;US)
LOCA
See LOSS OF COOLANT
LOCAL BOILING
See SUBCOOLED BOILING
LOCAL GOVERNMENT
Energy Conservation
Microcomputer software requirements of local government energy management programs and projects, 11:32114 (RA;US)
LOCAL GROUP
See GALAXIES
LONGITUDINAL PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES
LONG-RANGE TRANSPORT
Computer Codes
Modeled trends and climatological variability of the net transboundary mass flux of airborne sulfur between the United States and Canada (ASTRAP), 11:32710 (R;US)
LONGWALL MINING
Methane
Determining face methane-liberation patterns during longwall mining. Information circular/1985, 11:31380 (R;US)
Methane control on longwalls with cross-measure boreholes (Lower Kittanning Coalbed). Report of investigations/1985, 11:31381 (R;US)
LOS ALAMOS SCIENTIFIC LABORATORY
See LASL
LOSS OF COOLANT
Heat Transfer
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)
Critical flow of subcooled liquid and jet forces, 11:31898 (R;IT)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Hydraulics
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)
Critical flow of subcooled liquid and jet forces, 11:31898 (R;IT)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Radioactive Aerosols
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Risk Assessment
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
LOSS OF FLOW
Reactor Safety Experiments
THETIS 80% blocked cluster experiment. Part 1. Description of THETIS rig, the 80% blocked cluster assembly and experimental procedures, 11:31887 (R;GB)
THETIS 80% blocked cluster experiment. Part 5. Level swell experiments, 11:31888 (R;GB)
THETIS 80% blocked cluster experiment. Part 6. Overview, 11:31889 (R;GB)
LOWER HYBRID HEATING
Waveguides
Arc inhibitors for lower hybrid waveguide arrays, 11:33445 (J;US)
LOWER HYBRID RESONANCE HEATING
See LOWER HYBRID HEATING
LOW-LEVEL RADIOACTIVE WASTES
Combustion
Application of a glass furnace system to low-level radioactive and mixed waste disposal, 11:31515 (R;US)
Diffusion
Radionuclide distributions around a low-level radioactive waste disposal pond and ditch system at the Hanford Site, 11:31602 (BA;US)
Ground Disposal
Low-level radioactive wastes in subsurface soils, 11:31551 (BA;US)
Methodology for evaluating radiological consequences of the management of very low-level solide waste arising from decommissioning of nuclear power plants, 11:31510 (R;FR)
Grouting
Cleanout of waste storage tanks at Oak Ridge National Laboratory, 11:31562 (BA;US)
Marine Disposal
Bathymetry and acoustic echo character lower continental rise study area, E-N2, 11:31538 (RA;US)
Benthic megafauna at deep-sea study areas W-N and E-N, 11:31528 (RA;US)
Cruise report for R/V Wecoma cruises W8209A & B to Pacific study area W-N, September - October 1982, 11:31522 (RA;US)
Cruise report R/V Endeavor cruise EN-084 North Atlantic May 15-24, 1982, 11:31535 (RA;US)
Cruise report Endeavor cruise EN-085 North Atlantic May 27-June 8, 1982, 11:31536 (RA;US)
Cruise report Endeavor cruise EN-098 North Atlantic April 23-May 4, 1983, 11:31543 (RA;US)
Data report for current meters on Mooring CMMW-4, 1981; Pacific study area W-N, 11:31519 (RA;US)
Data report for current meters on mooring CMME-1, 1980-81; Atlantic study area E-N3, 11:31520 (RA;US)
Data report on sediment cores collected on cruise W8103-A, Pacific study area W-N, 11:31523 (RA;US)
Endeavor cruise 071 navigation and bathymetry, northern Hatteras Abyssal Plain, 11:31533 (RA;US)
Endeavor cruises 053, 069, and 085 CTD and hydrographic data report, 11:31542 (RA;US)
Interim status report: radiochemical studies in support of the low Level Waste Ocean Disposal Program, 11:31530 (RA;US)
Lithology and surficial sediment distribution: northern Hatteras Abyssal Plain, 11:31540 (RA;US)
Methodology for evaluating radiological consequences of the management of very low-level solide waste arising from decommissioning of nuclear power plants, 11:31510 (R;FR)
Northern Hatteras Abyssal Plain sediments: Geotechnical properties, 11:31532 (RA;US)
Northern Hatteras Abyssal Plain sediments (EN-071) geotechnical analyses, 11:31541 (RA;US)
Oceanographic studies through December 1982 at Pacific study area W-N, 11:31524 (RA;US)
Pore water geochemistry and the oxidation of sedimentary organic matter: Hatteras Abyssal Plain 1981, 11:31534 (RA;US)
Preparation and deployment of the bottom ocean monitor for long term photographic observations of the sea floor, 11:31531 (RA;US)
Progress research report, 27 June, 1983, benthic invertebrate studies, 11:31527 (RA;US)
Report on suspended particulate analyses, 11:31539 (RA;US)
Seismic echo character northern Hatteras Abyssal Plain, 11:31537 (RA;US)
SNL Document number 16-5277, 2/3/82 and Amendment number 02, 2/18/83, 11:31529 (RA;US)
Towing large nets by single warp at abyssal depths I: methods, 11:31525 (RA;US)
Towing large nets by single warp at abyssal depth II: biological results, 11:31526 (RA;US)
Meetings
Management of uranium mill tailings, low-level waste and hazardous waste, 11:31568 (B;US)
Radioactive Waste Disposal
Cleanout of waste storage tanks at Oak Ridge National Laboratory, 11:31562 (BA;US)
Evaluation of the potential for de-regulated disposal of very low level wastes from nuclear power plants, 11:31494 (R;US)
Hydraulic-fracture growth in dipping anisotropic strata as viewed through the surface deformation field, 11:31550 (BA;US)

Low-level radioactive wastes in subsurface soils, 11:31551 (BA;US)
Radioactive Waste Processing
Application of a glass furnace system to low-level radioactive and mixed waste disposal, 11:31515 (R;US)
Volume reduction of low-level radioactive wastes, 11:31569 (BA;US)
Radionuclide Migration
Transport code for radiocolloid migration: with an assessment of an actual low-level waste site, 11:31596 (BA;US)
Research Programs
Bathymetry and acoustic echo character lower continental rise study area, E-N2, 11:31538 (RA;US)
Benthic megafauna at deep-sea study areas W-N and E-N, 11:31528 (RA;US)
Cruise report for R/V Wecoma cruises W8209A & B to Pacific study area W-N, September - October 1982, 11:31522 (RA;US)
Cruise report R/V Endeavor cruise EN-084 North Atlantic May 15-24, 1982, 11:31535 (RA;US)
Cruise report Endeavor cruise EN-085 North Atlantic May 27-June 8, 1982, 11:31536 (RA;US)
Cruise report Endeavor cruise EN-098 North Atlantic April 23-May 4, 1983, 11:31543 (RA;US)
Data report for current meters on mooring CMME-1, 1980-81; Atlantic study area E-N3, 11:31520 (RA;US)
Data report for current meters on mooring CMME-2, 1981-82; Atlantic study ar EN-3, 11:31521 (RA;US)
Endeavor cruise 071 navigation and bathymetry, northern Hatteras Abyssal Plain, 11:31533 (RA;US)
Endeavor cruises 053, 069, and 085 CTD and hydrographic data report, 11:31542 (RA;US)
Interim status report: radiochemical studies in support of the low Level Waste Ocean Disposal Program, 11:31530 (RA;US)
Lithology and surficial sediment distribution: northern Hatteras Abyssal Plain, 11:31540 (RA;US)
Northern Hatteras Abyssal Plain sediments: Geotechnical properties, 11:31532 (RA;US)
Northern Hatteras Abyssal Plain sediments (EN-071) geotechnical analyses, 11:31541 (RA;US)
Oceanographic studies through December 1982 at Pacific study area W-N, 11:31524 (RA;US)
Pore water geochemistry and the oxidation of sedimentary organic matter: Hatteras Abyssal Plain 1981, 11:31534 (RA;US)
Preparation and deployment of the bottom ocean monitor for long term photographic observations of the sea floor, 11:31531 (RA;US)
Progress research report, 27 June, 1983, benthic invertebrate studies, 11:31527 (RA;US)
Report on suspended particulate analyses, 11:31539 (RA;US)
Seismic echo character northern Hatteras Abyssal Plain, 11:31537 (RA;US)
SNL Document number 16-5277, 2/3/82 and Amendment number 02, 2/18/83, 11:31529 (RA;US)
Towing large nets by single warp at abyssal depths I: methods, 11:31525 (RA;US)
Towing large nets by single warp at abyssal depth II: biological results, 11:31526 (RA;US)
Solidification
Volume reduction of low-level radioactive wastes, 11:31569 (BA;US)
Underground Disposal
Hydraulic-fracture growth in dipping anisotropic strata as viewed through the surface deformation field, 11:31550 (BA;US)
Source term development for tritium at the Sheffield disposal site, 11:31567 (BA;US)
Waste Forms
Leachability of cement encapsulated West Valley radwaste streams, 11:32320 (BA;US)
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
LUBRICATING OILS
Recycling
Waste hydrocarbons recycling, 11:31412 (J;US)
LUNGS
Radionuclide Kinetics
Evaluation of indoor aerosol control devices and their effects on radon progeny concentrations. Revision, 11:32713 (R;US)
LUTETIUM 176 TARGET
Photonuclear Reactions
Equilibration of ^{176}Lu/sup g,m/ under stellar conditions, 11:32913 (RA;US)
LWBR TYPE REACTORS
Fuel Rods
Production irradiated fuel assay gauge neutron detection: description and testing (LWBR Development Program), 11:31846 (R;US)
LWR TYPE REACTORS
See WATER COOLED REACTORS
LYASES
Code number 4
Enzyme Activity
Eye pigment granules of Drosophica melangogaster: isolation and characterization for synthesis of sepiapterin and precursors of drosopterin, 11:32805 (J;GB)

MA 754
See NICKEL BASE ALLOYS
MA 956
See IRON BASE ALLOYS
MACERALS
Separation Processes
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
MACHINING
Automation
FMS precision machining, 11:32425 (R;US)
Control Systems
FMS precision machining, 11:32425 (R;US)
MACROPHAGES
Morphological Changes
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
MADAGASCAR
Energy Policy
Madagascar - energy situation 1984, 11:32008 (R;DE;In German)
Energy Supplies
Madagascar - energy situation 1984, 11:32008 (R;DE;In German)
MAGMAMAX PROCESS
See BINARY-FLUID SYSTEMS
MAGNESIUM
Adsorption
Electrokinetics, adsorption and colloid study of simulated nuclear waste glasses leached in aqueous solutions, 11:32296 (BA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
X-Ray Fluorescence Analysis
Determination of lead, zinc, and magnesium in dolomite and its benefication products by use of x-ray-fluorescence spectrometry, 11:32336 (R;ZA)
MAGNESIUM 24 REACTIONS
Compound-Nucleus Reactions
Reactions of ^{24}Mg with ^{16}O, 11:33111 (RA;US)
MAGNESIUM ALLOYS
Sorptive Properties
Long-term behavior of the tritides formed by nickel-based intermetallic compounds, 11:33426 (J;US)

MAGNESIUM IONS
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
MAGNESIUM OXIDES
See also SPINELS
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)
Sorptive Properties
Electron microscopy and krypton adsorption characterization of high-purity MgO powder, 11:32275 (J;US)
MAGNESIUM SILICATES
See also OLIVINE
Crystal Structure
Calculation of the elastic constants and high-pressure properties of diopside, $CaMgSi_2O_6$, 11:32358 (J;US)
Elasticity
Calculation of the elastic constants and high-pressure properties of diopside, $CaMgSi_2O_6$, 11:32358 (J;US)
Molecular Structure
Calculation of the elastic constants and high-pressure properties of diopside, $CaMgSi_2O_6$, 11:32358 (J;US)
MAGNESIUM SULFATES
Solubility
Aqueous inorganic phase equilibria at high temperatures: some experimental, theoretical, and applied aspects, 11:32353 (J;GB)
MAGNET COILS
Configuration
The integrated-blanket-coil concept applied to the poloidal field and blanket systems of a tokamak reactor, 11:33449 (J;US)
Power Supplies
New poloidal and toroidal crowbar systems in ETA-BETA II, 11:33456 (BA;US)
MAGNETIC BEARINGS
Performance
Magnetic bearings: an adaptive solution to motion-control problems, 11:32421 (R;US)
Uses

Summary - panel discussion on nuclear aerosol measurements, 11:31934 (RA;US)
Light Scattering
Application of optical methods in nuclear aerosol measurements, 11:31926 (RA;US)
Measurement of high concentration DOP aerosols by a laser dust counter, 11:31933 (RA;US)

MECHANICAL STRUCTURES
Crack Propagation
Criteria for unstable crack extension under displacement control, 11:32511 (R;DE;In German)
D Codes
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions). Revision 2, 11:32431 (R;US)
Dynamic Loads
DYNA3D user's manual (nonlinear dynamic analysis of structures in three dimensions). Revision 2, 11:32431 (R;US)
Joints
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint, 11:31840 (R;US)
Tape joint stiffness, 11:32427 (R;US)
Mechanical Vibrations
Leakage flow-induced vibrations for variations of a tube-in-tube slip joint, 11:31840 (R;US)
Modal test structure project status report, 11:32430 (R;US)
Seismic Effects
Effects of earthquakes on power station components, 11:31777 (TJ;GB)

MEDICAL CENTERS
See MEDICAL ESTABLISHMENTS

MEDICAL ESTABLISHMENTS
Radiation Monitoring
Operational problems with radiation survey instruments: the medical perspective, 11:32612 (RA;US)

MEETINGS
Analytical chemistry instrumentation, 11:32654 (B;US)
anti pp options for the supercollider: proceedings, 11:32589 (R;US)
Proceedings of the first international information meeting on the TMI-2 accident, 11:31895 (R;US)
Proceedings of the workshop on atomic physics with stored cooled heavy ion beams, 11:32930 (R;US)
Proceedings of the 7. Seminar on problems of high energy physics and quantum field theory. Vol. 1, 11:32977 (R;SU;In Russian)

MELANOCYTES
See ANIMAL CELLS

MELTDOWN
Radioactive Aerosols
Aerosol source considerations for LMFBR core disruptive accidents, 11:31914 (RA;US)
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Measurements of the condensation of steam on different aerosols under LWR core melt down conditions, 11:31923 (RA;US)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Risk Assessment
Aerosol source considerations for LMFBR core disruptive accidents, 11:31914 (RA;US)
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Measurements of the condensation of steam on different aerosols under LWR core melt down conditions, 11:31923 (RA;US)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)

MEMBRANES
Design
Electrodialysis membrane stack MS 3070, 11:32329 (R;DE;In German)

MERCURY
Ecological Concentration
Equisetum and the cycling of mercury at Mount St. Helens: plant-soil relations, 1980-1984, 11:32758 (J;NL)
Mineral Cycling
Equisetum and the cycling of mercury at Mount St. Helens: plant-soil relations, 1980-1984, 11:32758 (J;NL)
Oscillator Strengths
Vacuum ultraviolet oscillator strengths of Hg measured by sum-frequency mixing, 11:32952 (J;US)
Removal
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
Vapors
Fate of mercury released from power plants. Final report, 11:31785 (R;US)

MESH GENERATION
Computer Codes
MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET, 11:33310 (R;GB)
Finite Element Method
MESHJET. A mesh generation package for finite element MHD equilibrium codes at JET, 11:33310 (R;GB)

MESIC MOLECULES
Binding Energy
Relativistic effects in the weakly bound states of ddμ and dtμ mesic molecules, 11:32940 (R;SU;In Russian)

MESON RESONANCES
See also CHARMED MESON RESONANCES
CHI RESONANCES
IOTA-1440 RESONANCES
*K*RESONANCES*
Particle Production
Observation of a narrow enhancement in phiKK and phi$\pi\pi$ final states produced in 400-GeV p-N interactions, 11:32992 (J;US)
MESON-DEUTERON INTERACTIONS
See DEUTERIUM TARGET
MESON-NUCLEON INTERACTIONS
See also PION-NUCLEON INTERACTIONS
Sum Rules
Linking total cross-sections for hard and soft processes through analyticity in Q^2 and sum rules, 11:33187 (R;PL)
Total Cross Sections
Linking total cross-sections for hard and soft processes through analyticity in Q^2 and sum rules, 11:33187 (R;PL)
MESONS
See also MESON RESONANCES
SCALAR MESONS
Particle Production
On a quark distribution in nuclei, 11:33191 (R;SU;In Russian)
METAL INDUSTRY
Electric Furnaces
High efficiency electric radiant holding furnaces on diecasting machines. Demonstration project at Fry's Diecastings Ltd. [London], 11:32103 (R;GB)
Furnaces
Flux degasser on an aluminium bale-out furnace. A demonstration at Diecastings Ltd. [Birmingham], 11:32100 (R;GB)
Use of low thermal mass ceramic fibre linings on a bale-out furnace. Demonstration project at Fry's Diecastings Ltd. [Stourbridge], 11:32101 (R;GB)
Gas Furnaces
Trials for a gas-fired immersion-heated holding furnace, 11:32104 (R;GB)
METALLIC GLASSES
Crystallization
Nucleation and growth in surface-melted crystalline and amorphous $Fe_{40}Ni_{40}P_{14}B_6$ alloys, 11:32216 (J;US)
Nucleation
Nucleation and growth in surface-melted crystalline and amorphous $Fe_{40}Ni_{40}P_{14}B_6$ alloys, 11:32216 (J;US)
Stability
Stability of amorphous metal films on semiconductor substrates. Progress report, January-December 1985 (W-Si; Ni-Nb), 11:32173 (R;US)
METALLOTHIONEIN
Chemical Preparation
Metal-binding proteins for strategic metal recovery and metal detoxification, 11:32796 (R;US)
DNA Sequencing
Molecular and cellular mechanisms of cadmium resistance in cultured cells, 11:32799 (R;US)
Enzyme Induction
Molecular and cellular mechanisms of cadmium resistance in cultured cells, 11:32799 (R;US)
METAL-METAL BATTERIES
Heat Transfer
Heat generation in lithium-alloy, iron disulfide, high-temperature batteries, 11:31969 (B;US)
METALS
See also ACTINIDES
ALUMINIUM
ANTIMONY
BISMUTH
CADMIUM
GERMANIUM
LEAD
MERCURY
RARE EARTHS
TIN
ZINC
Dielectric Materials
Dielectric effects in biopolymers: the theory of ionic saturation revisited, 11:32373 (J;US)
Extrusion
Strain analysis for extrusion of powder metals, 11:32174 (R;US)
Materials Recovery
Rekindled interest in pyrometallurgical processing, 11:31480 (J;US)
Melting
Induction melting of metals: state-of-the-art assessment. Final report, 11:32180 (R;US)
Physical Radiation Effects
Tritium-helium effects in metals, 11:33436 (J;US)
Pyrometallurgy
Rekindled interest in pyrometallurgical processing, 11:31480 (J;US)
Recovery
A molten salt reactor for dispersed solid phase chlorination, 11:31347 (B;US)
METAL-WATER REACTIONS
See MOLTEN METAL-WATER REACTIONS
METASTABLE STATES
For atomic and molecular states only; for nuclear states use ISOMERIC NUCLEI.
Energy Transfer
Study of a high and low pressure plasma produced in a He-N_2 mixture: application to spontaneous emissions by radiative collisions, 11:32935 (R;FR;In French)
METEORITES
Hyperfine Structure
Solid state transformations in Fe-Ni alloys from meteorites in powder form, 11:32910 (R;BR)
METEOROLOGY
Comparisons of meteorological and structure parameters in complex terrain, 11:32701 (R;US)
METHANATION
Catalysts
Impurity modification of surface catalyzed reactions: Methanation over phosphided nickel, 11:31655 (B;US)
METHANE
Adsorption
Evaluation of the effect of methane adsorption/desorption in well tests on coal beds, 11:31442 (RA;US)
Biosynthesis
Acetate metabolism by Methanosarcina, 11:31622 (RA;US)
Anaerobic digestion of hemicellulosic feedstocks, 11:31635 (RA;US)
Assimilatory reduction of N_2 and NO_3^- by Methanococcus thermolithotrophicus, 11:31629 (RA;US)
Defined starter culture for biomethanation of proteinaceous wastes, 11:31630 (RA;US)
Development of ideas on the nature and agents of biomethanogenesis, 11:31621 (RA;US)
Effect of hydrogen concentration on population distribution and kinetics in methanogenesis of propionate, 11:31625 (RA;US)
Effects of the addition of propionate and butyrate to thermophilic methane-producing digesters, 11:31633 (RA;US)
Energetics of H_2-producing syntrophic bacteria, 11:31626 (RA;US)
Gasification of concentrated particulate and solid substrates by biphasic anaerobic digestion, 11:31637 (RA;US)
High solids digestion of MSW to methane by anaerobic digestion (Municipal solid wastes), 11:31636 (RA;US)
Metabolism of H_2 and CO_2 by Methanobacterium, 11:31624 (RA;US)
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Preliminary evaluation of the effects of A d-RDF bin[illegible] agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
Thermodynamics of catabolic reactions in the anaerobic digestor, 11:31627 (RA;US)
Bulk Density
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Chemical Preparation
Impurity modification of surface catalyzed reactions: Methanation over phosphided nickel, 11:31655 (B;US)

Control
Methane control on longwalls with cross-measure boreholes (Lower Kittanning Coalbed). Report of investigations/1985, 11:31381 (R;US)
Desorption
Evaluation of the effect of methane adsorption/desorption in well tests on coal beds, 11:31442 (RA;US)
Enthalpy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Entropy
Thermodynamic properties of hydrocarbons, 11:32368 (R;US)
Forecasting
Use of in vitro anaerobic landfill samples for estimating landfill gas generation rates, 11:31642 (RA;US)
Ignition
Role of the radical pool in combustion, 11:32399 (R;US)
Monitoring
Determining face methane-liberation patterns during longwall mining. Information circular/1985, 11:31380 (R;US)
Processing
Final Report, Stage 3., 11:31651 (R;SE;SW)
Production
Chemical and microbiological analysis of Aveley Landfill, England, 11:31645 (RA;US)
Design, operation, and results of the controlled landfill project Mountain View, California, 11:31644 (RA;US)
Eighth symposium on biotechnology for fuels and chemicals. Program and abstracts, 11:31659 (R;US)
Evolution of the RefCOM system (Refuse conversion to methane), 11:31639 (RA;US)
Gas evolution during oil shale pyrolysis. Part 1. Nonisothermal rate measurements, 11:31469 (J;GB)
Methane from biomass and waste. Annual report for 1984. Technical progress report, 11:31653 (R;US)
Recovery
Coalbed methane. Technology status report, 11:31353 (R;US)
Final Report, Stage 3., 11:31651 (R;SE;SW)
Overview: coalbed methane, 11:31441 (RA;US)
Resource Assessment
Coalbed methane. Technology status report, 11:31353 (R;US)
Resources
Exploratory studies on deep earth sources of methane: Hg as a diagnostic and prospecting tool. Annual report, April-September 1985. Report No. 2, 11:31457 (R;US)
Separation Processes
New concept for the production of high-Btu gas from anaerobic digestion, 11:31641 (RA;US)
Viscosity
Improvement of CO_2 flood performance. Quarterly report, October 1-December 31, 1985, 11:31388 (R;US)

METHANOGENIC BACTERIA
Batch Culture
Defined starter culture for biomethanation of proteinaceous wastes, 11:31630 (RA;US)
Biochemical Reaction Kinetics
Acetate metabolism by Methanosarcina, 11:31622 (RA;US)
Assimilatory reduction of N_2 and NO_3^- by Methanococcus thermolithotrophicus, 11:31629 (RA;US)
Effect of hydrogen concentration on population distribution and kinetics in methanogenesis of propionate, 11:31625 (RA;US)
Link between hydrogen and sulfur metabolisms in Methanosarcina barkeri (DSM 800), 11:31628 (RA;US)
Metabolism of H_2 and CO_2 by Methanobacterium, 11:31624 (RA;US)
Biological Pathways
One carbon metabolism in anaerobic bacteria. Organic acid and methane production. Progress report, June 1985-May 1986, 11:32797 (R;US)
Cloning
Hybridization of DNA from methanogens with eubacterial probes, 11:32808 (RA;US)
DNA-Cloning
Expression of a methanogen gene in Escherichia coli and in Bacillus subtilis, 11:32809 (RA;US)
Genetic Engineering
Antibiotic G418 for selection and maintenance of pro- and eukaryotic transformants and its possible application for methanogen transformation, 11:32810 (RA;US)
Historical Aspects
Development of ideas on the nature and agents of biomethanogenesis, 11:31621 (RA;US)
Kinetics
Acetoclastic methanogens in anaerobic digesters, 11:31623 (RA;US)
Microstructure
Acetoclastic methanogens in anaerobic digesters, 11:31623 (RA;US)
Morphology
Acetoclastic methanogens in anaerobic digesters, 11:31623 (RA;US)

METHANOL
Chemical Reaction Yield
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)

METHANOL FUELS
Pure methanol, methanol-water mixtures, or methanol with additives; for methanol-gasoline mixtures, use GASOHOL.
Corrosive Effects
Engine wear with methanol fuel in a nitrogen-free environment, 11:32124 (B;US)

METHANOTROPHIC BACTERIA
Inhibition
Methane-oxidizing bacteria in sanitary landfills, 11:31643 (RA;US)

METHYL ALCOHOL
See METHANOL

METHYL ISOBUTYL KETONE
Hydrogenation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)

METHYL-FUEL
See ALCOHOLS
METHANOL

METROPOLITAN AREAS
See URBAN AREAS

MFTF DEVICES
Prior to October 1977, MX DEVICES was used to index this concept.
Plasma Diagnostics
Evaluation of ion-energy spectrometers for use on MFTF, 11:33312 (R;US)
Time resolved neutron spectrum measurements at the mirror fusion test facility, 11:33343 (J;US)
Radiation Detectors
Time resolved neutron spectrum measurements at the mirror fusion test facility, 11:33343 (J;US)
Specifications
Upgrade of MFTF-B for fusion technology, 11:33447 (J;NL)
Spectrometers
Evaluation of ion-energy spectrometers for use on MFTF, 11:33312 (R;US)

MHD GENERATORS
Fuels
Numerical analysis of possibilities of carbon fuels applied to MHD-generators, 11:32031 (R;SU;In Russian)

MIBK
See METHYL ISOBUTYL KETONE

MICELLAR SYSTEMS
Paramagnetism
Spin-probe spin-label studies of sodium dodecyl sulfate micelles, 11:32344 (R;BR)

MICELLAR-POLYMER FLOODING
See MICROEMULSION FLOODING

MICROBIAL FLORA
See MICROORGANISMS

MICROBIAL PROCESSES
See ANAEROBIC DIGESTION
BIOCONVERSION

MICROCOMPUTERS

MICROORGANISMS
See also BACTERIA
Metabolism
Anaerobic SBR treatment of coal conversion wastewaters. Second quarterly report, 11:31313 (R;US)
Anaerobic microbial transformations in subsurface environments: highlights, 11:32856 (R;US)
MICROPROCESSORS
Design
Ten principles for the design of user-friendly design tools, 11:32050 (RA;US)
Programming
DHC: a diurnal heat capacity program for microcomputers, 11:31744 (RA;US)
Methodology for hourly simulation of residential HVAC equipment, 11:32065 (RA;US)
Microcomputer software requirements of local government energy management programs and projects, 11:32114 (RA;US)
Microcomputer program for energy analysis of residences, 11:32063 (RA;US)
Microcomputer program of crossflow cooling tower performance, 11:32096 (RA;US)
Microcomputer program for calculating temperatures of underground power cables, 11:31788 (RA;US)
Passive solar design: SUPERCALC performs SLR, 11:31745 (RA;US)
SDA/ONE: heat load analysis, 11:31748 (RA;US)
Solar sun space, 11:31747 (RA;US)
Uses
Active solar energy system design using microcomputer-based models, 11:31743 (RA;US)
Development of a microprocessor based wind and solar monitoring system, 11:31730 (RA;US)
Energy models: exploring the mini- and microcomputers' applications, 11:32048 (RA;US)
Integrating a microcomputer for online monitoring of an existing biomass conversion indirect liquefaction process, 11:31646 (RA;US)
Local employment impact of conservation and renewable energy measures: input/output analysis with a microcomputer, 11:32042 (RA;US)
Microcomputer control and monitoring of heat transfer experiments with underground power cables, 11:31787 (RA;US)
Microcomputer application for design and optimization of thermal energy storage system, 11:32058 (RA;US)
Ten principles for the design of user-friendly design tools, 11:32050 (RA;US)
Using a microcomputer for the evaluation of heat pump water heaters in the food service environment, 11:32053 (RA;US)
MICROWAVE EQUIPMENT
Antennas
Final report for TMX-U systems support, 11:33411 (R;US)
Semiconductor Diodes
Transmission of a modulated microwave across a diode, 11:32514 (R;US)
MIGRATION (RADIONUCLIDE)
See RADIONUCLIDE MIGRATION
MILL TAILINGS
Air Pollution Control
Fugitive dust control at uranium mill tailings piles, 11:31600 (BA;US)
Coverings
Asphalt emulsion radon barrier systems for uranium mill tailings: A summary of the technology, 11:31571 (BA;US)
Erosion
Fugitive dust control at uranium mill tailings piles, 11:31600 (BA;US)
Ground Cover
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
Meetings
Management of uranium mill tailings, low-level waste and hazardous waste, 11:31568 (B;US)
Radioactive Waste Disposal
Diffusion of radon in candidate soils for covering uranium-mill tailings, 11:31573 (BA;US)
Fugitive dust control at uranium mill tailings piles, 11:31600 (BA;US)
Groundwater contamination at the inactive Riverton, Wyoming uranium mill tailings, 11:31597 (BA;US)
Neutralizing barrier for reducing contaminant migration from a uranium mill tailings disposal pond, 11:31570 (BA;US)
Rapid seepage of contaminants through the highwall of a uranium mill tailings pit, 11:31598 (BA;US)
The effects of crystalline Fe and Mn oxides on contaminant migration through soil liners, 11:31599 (BA;US)
Radionuclide Migration
Asphalt emulsion radon barrier systems for uranium mill tailings: A summary of the technology, 11:31571 (BA;US)
Remedial Action
Asphalt emulsion radon barrier systems for uranium mill tailings: A summary of the technology, 11:31571 (BA;US)
Mathematical simulation of contaminant distribution in and around the uranium mill tailing piles, Riverton, Wyoming, 11:31601 (BA;US)
Stabilization
Fugitive dust control at uranium mill tailings piles, 11:31600 (BA;US)
MILLSTONE-3 REACTOR
Waterford, Connecticut, USA
Reactor Operation
Review of the Millstone 3 Probabilistic Safety Study, 11:31949 (R;US)
Safety
Review of the Millstone 3 Probabilistic Safety Study, 11:31949 (R;US)
MINE-MOUTH GENERATING PLANTS
See COAL MINES
FOSSIL-FUEL POWER PLANTS
MINERAL CYCLING
Mathematical Models
Role of soil invertebrates in turnover of organic matter and nutrients, 11:32754 (BA;DE)
MINERAL RESOURCES

MODERATING DETECTORS
Calibration
Calibration of neutron survey instruments, scatter corrections for a population of instruments and organizational aspects, 11:32631 (RA;US)
MODIFIED IN-SITU PROCESSES
Bench-Scale Experiments
Uniform retorting of an anisotropic shale bed, 11:31466 (R;US)
Yields
Uniform retorting of an anisotropic shale bed, 11:31466 (R;US)
MODULAR COGENERATION POWER PLANTS
See DUAL-PURPOSE POWER PLANTS
MOISTURE
Migration
Kieper Method: computer application on moisture migration, 11:32057 (RA;US)
MOLECULAR BEAMS
Dynamics
HMI Department of Radiation Chemistry: Results of scientific activities in 1984, 11:32384 (R;DE;In German)
MOLECULAR CRYSTALS
Detonations
Simulation of the initiation of detonation in an energetic molecular crystal: the overdriven case, 11:32668 (RA;US)
MOLECULAR IONS
Coordinate the above descriptor with a descriptor for the specific ion.
See also HYDROGEN IONS 2 PLUS
Electron-Ion Collisions
Excitation and dissociation of molecular ions by electron impact. Decay of molecular Rydberg state, 11:32938 (R;SU;In Russian)
Vibrational States
Excitation and dissociation of molecular ions by electron impact. Decay of molecular Rydberg state, 11:32938 (R;SU;In Russian)
MOLECULAR MODELS
Method for precisely computing molecular integrals over STOs with n=1, 11:32960 (J;JP)
MOLECULAR ORBITAL MODEL
See MOLECULES
MOLECULAR SIEVES
Performance
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
MOLECULES
See also MESIC MOLECULES
POLYATOMIC MOLECULES
Dissociation
Dissociation of molecules by slow electrons, 11:32964 (BA;US)
Electron-Molecule Collisions
Dissociation of molecules by slow electrons, 11:32964 (BA;US)
MOLLUSCS
Proteins
Hemocyanin respiratory pigment in bivalve mollusks, 11:32800 (J;US)
MOLTEN CARBONATE FUEL CELLS
Prior to June 1980 this information was indexed with the descriptors HIGH-TEMPERATURE FUEL CELLS + MOLTEN SALTS + CARBONATES.
Performance
Effects of H_2S on molten carbonate fuel cells. Final report, 11:32033 (R;US)
MOLTEN METAL-WATER REACTIONS
Radioactive Aerosols
Prediction of the rates of chemical transformation of sodium fire aerosols, 11:31924 (RA;US)
Risk Assessment
Prediction of the rates of chemical transformation of sodium fire aerosols, 11:31924 (RA;US)
MOLYBDENUM
Catalytic Effects
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Migration
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments, 11:31341 (RA;US)
Physical Radiation Effects
Calculated radiation damage effects of high energy proton beams, 11:32175 (R;CH)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)
MOLYBDENUM 92 TARGET
Krypton 86 Reactions
Effect of particle evaporation in the $^{136}Xe + {}^{56}Fe$ reaction and a reinvestigation of the $^{86}Kr + {}^{92}Mo$ system, 11:33130 (RA;US)
MOLYBDENUM 98
Neutrino Reactions
Molybdenum solar neutrino experiment, 11:33137 (R;US)
MOLYBDENUM ALLOYS
See also INCONEL 617
STAINLESS STEEL-316
Corrosion
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
Influence of temperature and lithium purity on corrosion of ferrous alloys in a flowing lithium environment, 11:32167 (R;US)
Ductile-Brittle Transitions
Saturation of the DBTT shift of irradiated 12Cr-1MoVW with increasing fluence, 11:32160 (R;US)

MOLYBDENUM OXIDES
Raman Spectra
Raman spectroscopic investigation of the effect of H_2O on the molybdenum surface species in MoO_3/Al_2O_3 catalysts, 11:32359 (J;US)
MOLYBDENUM SULFIDES
Catalytic Effects
Hydrodesulfurization by reduced molybdenum sulfides: Activity and selectivity of Chevrel phase catalysts, 11:31402 (B;US)
MONAZITES
Geochemistry
Actinide microdistributions within monazite, 11:32903 (BA;US)
MONITORING (RADIATION)
See RADIATION MONITORING
MONITORS
See also BEAM MONITORS
RADIATION MONITORS
Performance
Building energy monitoring and analysis (BEMA), 11:32047 (RA;US)
Energy signature monitor (ESM), a low cost Class B data acquisition system, 11:32046 (RA;US)
MONITORS (BEAM)
See BEAM MONITORS
MONITORS (RADIATION)

MONOCARBOXYLIC ACIDS
See also ACETIC ACID
BUTYRIC ACID
Metabolism
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1983, 11:32829 (R;US)
MONOCHROMATORS
Optical systems for synchrotron radiation. Lecture 3. Monochromator systems. Revision, 11:33261 (R;US)
MONOCRYSTALS
Neutron Diffraction
Neutron diffraction on a large block mosaic crystal, 11:32255 (R;SU;In Russian)
MONOSACCHARIDES
Chemical Preparation
Nuclear medicine and imaging research. Quantitative studies in radiopharmaceutical science. Comprehensive progress report, January 1, 1983-June 30, 1985, 11:32830 (R;US)
Labelling
Nuclear medicine and imaging research. Quantitative studies in radiopharmaceutical science. Comprehensive progress report, January 1, 1983-June 30, 1985, 11:32830 (R;US)
MONTE CARLO METHOD
Meetings
Application of Monte Carlo method in modelling physical and physico-chemical processes. Seminar proceedings, 11:33218 (R;CS;In Czech)
Renormalization
Truncation errors in the Monte Carlo renormalization group: A comparative study, 11:33275 (J;US)
MORGANTOWN ENERGY TECHNOLOGY CENTER
Information Systems
Development of the resource extraction data base to support the eastern gas shales, western gas sands, and coalbed methane programs, 11:31450 (RA;US)
MOROCCO
Energy Policy
Morocco - energy situation 1984, 11:32011 (R;DE;In German)
Energy Supplies
Morocco - energy situation 1984, 11:32011 (R;DE;In German)
MOS TRANSISTORS
Metal Oxide Silicon transistors.
Testing
TA683 test chip layout documentation, 11:32513 (R;US)
MOTHS
Predator-Prey Interactions
Lichens and lepidopterons, 11:32753 (J;US)
MOUND LABORATORY
Radiation Monitoring
Development of an integrated monitoring system for a new tritium facility at Mound, 11:33424 (J;US)
Tritium Meters
Development of an integrated monitoring system for a new tritium facility at Mound, 11:33424 (J;US)
MR-2 MOSCOW REACTOR
See RPT REACTOR
MT ST HELENS
Environmental Effects
Equisetum and the cycling of mercury at Mount St. Helens: plant-soil relations, 1980-1984, 11:32758 (J;NL)
MULTICHARGED IONS
Ions with charge 3 and above. Coordinate the above descriptor with a descriptor for the specific ion.
Electron-Ion Collisions
Excitation and ionization of highly charged ions by electron impact. Progress report, September 1, 1985-April 30, 1986, 11:33292 (R;US)
Ion-Ion Collisions
Quadrupolar transitions induced proton impacts for multicharged ions with small excitation energy, 11:32939 (R;SU;In Russian)
Mathematical Models
Semiempirical studies of atomic structure. Progress report, 2 January 1985-1 April 1986, 11:32931 (R;US)
Research Programs
Semiempirical studies of atomic structure. Progress report, 2 January 1985-1 April 1986, 11:32931 (R;US)
MULTIGROUP THEORY
Integral Equations
Multigroup transport equations with nondiagonal cross-section matrices, 11:33224 (J;US)
Legendre Polynomials
Multigroup Legendre coefficients for the diamond difference continuous slowing down operator, 11:33228 (J;US)
Matrices
Multigroup transport equations with nondiagonal cross-section matrices, 11:33224 (J;US)
MULTIPLE SCATTERING
Multiple-scattering theory for clusters of nonoverlapping potentials of arbitrary shape, 11:33244 (J;US)
MULTIPROCESSORS
See ARRAY PROCESSORS
MULTIWIRE DRIFT CHAMBERS
See DRIFT CHAMBERS
MULTIWIRE PROPORTIONAL CHAMBERS
See also DRIFT CHAMBERS
Design
Construction and testing of a Breskin counter, 11:32595 (RA;US)
Performance
Construction and testing of a Breskin counter, 11:32595 (RA;US)
MUNICIPAL BUILDINGS
See PUBLIC BUILDINGS
MUNICIPAL WASTES
Acid Hydrolysis
Production of chemicals and fuels by acid hydrolysis and fermentation of MSW (Municipal solid wastes), 11:31657 (RA;US)
Anaerobic Digestion
Design, operation, and results of the controlled landfill project Mountain View, California, 11:31644 (RA;US)
Engineering studies on MSW as substrate for methanogenesis (Municipal solid wastes), 11:31638 (RA;US)
Evolution of the RefCOM system (Refuse conversion to methane), 11:31639 (RA;US)
Gasification of concentrated particulate and solid substrates by biphasic anaerobic digestion, 11:31637 (RA;US)
High solids digestion of MSW to methane by anaerobic digestion (Municipal solid wastes), 11:31636 (RA;US)
New concept for the production of high-But gas from anaerobic digestion, 11:31641 (RA;US)
Nutrient requirements for anaerobic digestion, 11:31631 (RA;US)
Use of in vitro anaerobic landfill samples for estimating landfill gas generation rates, 11:31642 (RA;US)

Bioconversion
Bioconversion of municipal solid waste and sewage sludge to ethanol, 11:31658 (RA;US)
Chemical Composition
Chemical and microbiological analysis of Aveley Landfill, England, 11:31645 (RA;US)
Marine Disposal
Projected ocean dumping rates for municipal and industrial wastes in the year 2000. Report for 26 March 1984-26 August 1985, 11:31987 (R;US)

MUNTZ METAL
Cathodic Protection
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)

MUON DETECTION
Flat Magnetic Spectrometers
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)

MUON PAIRS
Pair Production
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)

MUON REACTIONS
Deep Inelastic Scattering
On nuclear effects in deep inelastic scattering of electrons and muons, 11:33184 (RA;SU;In Russian)

MUON-ATOM COLLISIONS
Inner-Shell Ionization
Coupled-channels calculations of excitation and ionization in collisions of negatively charged projectiles with atoms, 11:32966 (BA;NL)

MUSEUMS
See EDUCATIONAL FACILITIES

MUTAGENESIS
Information Retrieval
Use of selected toxicology information resources in assessing relationships between chemical structure and biological activity, 11:33492 (J;US)

MUTANTS
Sensitivity
Defective DNA cross-link removal in Chinese hamster cell mutants hypersensitive to bifunctional alkylating agents, 11:32860 (J;US)

MWPC
See MULTIWIRE PROPORTIONAL CHAMBERS

MX DEVICES
See MFTF DEVICES

MYOCARDIUM
Radioisotope Scanning
Quantitative studies in radiopharmaceutical science. Progress report, January 1-December 31, 1983, 11:32829 (R;US)

N

NAI DETECTORS
Electronic Guidance
Improved method for the stabilization of NaI-photomultiplier gamma detectors against thermal and other drift, 11:32637 (J;NL)

NAPHTHALENE
Hydrogenation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Oxidation
Aromatics oxidation and soot formation in flames. Progress report for year beginning August 15, 1985, 11:32398 (R;US)
Solubility
Novel experimental studies for coal liquefaction. Quarterly progress report, January 1-March 31, 1986, 11:31311 (R;US)

NAPHTHENES
See CYCLOALKANES

NATIONAL REACTOR TESTING STATION
See IDAHO NATIONAL ENGINEERING LABORATORY

NATURAL CIRCULATION
See NATURAL CONVECTION

NATURAL CONVECTION
Energy transport using natural convection boundary layers, 11:31757 (R;US)

NATURAL GAS
See also BIOGENIC GAS
Electricity versus natural gas in small industrial boilers. Working paper, 11:32109 (R;US)
Auxiliary Heating
Passive solar/gas technology characterization and development. Final report, December 1982-March 1985, 11:31754 (R;US)
Chemical Analysis
Analyses of natural gases, 1984. Information Circular/1985, 11:31464 (R;US)
Cogeneration
Financial and regulatory issues of packaged cogeneration, 11:31434 (J;US)
Consumption Rates
International comparison of residential gas use and conservation, 11:31436 (BA;US)
Demand Factors
Energy outlook for the eighties, 11:31411 (J;US)
Energy Models
[Oil and gas investment and profitability projections. Final report], 11:31406 (R;US)
Market
Impact of lower world oil prices and alternative energy tax proposals on the US economy, 11:31409 (R;US)
Industrial pricing of natural gas: the historical perspective, 11:31435 (J;US)
Monthly energy review, January 1986, 11:32018 (R;US)
Vulnerability of industrial natural-gas markets to electricity and coal: a context for R and D planning. Working paper, 11:31433 (R;US)
Prices
Analysis of the Department of Energy's Notice of Proposed Rulemaking (NOPR), "ceiling prices: old gas pricing structure", 11:31460 (R;US)
Fuel price projections by end-use sector for Illinois. Revision, 11:32026 (R;US)
Industrial pricing of natural gas: the historical perspective, 11:31435 (J;US)
Monthly energy review, January 1986, 11:32018 (R;US)
Pricing Regulations
Analysis of the Department of Energy's Notice of Proposed Rulemaking (NOPR), "ceiling prices: old gas pricing structure", 11:31460 (R;US)
Economic analysis of block billing for natural gas, 11:31461 (R;US)
Reserves
Analysis of the Department of Energy's Notice of Proposed Rulemaking (NOPR), "ceiling prices: old gas pricing structure", 11:31460 (R;US)
Resources
Exploratory studies on deep earth sources of methane: Hg as a diagnostic and prospecting tool. Annual report, April-September 1985. Report No. 2, 11:31457 (R;US)
Storage Facilities
Laboratory investigation for determination of the hydraulic fracture gradient in salt. Final report, 11:31415 (R;DE;In German)
Supply and Demand
Annual Energy Review, 1985, 11:32028 (R;US)
Transport
New pipe steel test gets critical study, 11:31462 (J;US)
Overview of plastic pipe research at Battelle, 11:31463 (J;US)
Underground Storage
Laboratory investigation for determination of the hydraulic fracture gradient in salt. Final report, 11:31415 (R;DE;In German)

NATURAL GAS DEPOSITS
Acoustic Monitoring
Crosswell acoustic imaging project, 11:31426 (RA;US)
Caliper Logging
In-situ stress determination from wellbore elongation measurements, 11:31387 (BA;US)
Coordinated Research Programs
Overview: coalbed methane, 11:31441 (RA;US)
Dipmeter Logging
Predictions of size and orientations of Lenticular reservoirs in the Mesaverde group, Northwestern Colorado, 11:31427 (BA;US)
Fluid Mechanics
Installation of a Devonian shale reservoir testing facility and acquisition of reservoir property measurements, 11:31440 (RA;US)
Gamma Logging
Log analysis techniques for quantifying the permeability of sub-millidarcy sandstone reservoirs, 11:31386 (BA;US)
Geochemistry
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)
Ordovician black shales: Devonian shale-oil study, 11:31419 (RA;US)
Geologic Fractures
Eastern gas shales lineament analysis, 11:31421 (RA;US)
Multiwell Experiment site geology, 11:31424 (RA;US)
Rock matrix and fracture analysis of flow in western tight gas sands, 11:31425 (RA;US)
Geologic History
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)
Geologic characterization of tight gas reservoirs, Piceance Basin, 11:31423 (RA;US)
Multiwell Experiment site geology, 11:31424 (RA;US)
Geologic Models
Installation of a Devonian shale reservoir testing facility and acquisition of reservoir property measurements, 11:31440 (RA;US)
Overview: coalbed methane, 11:31441 (RA;US)
Geologic Structures
Coalbed methane geostatistical analysis project, 11:31445 (RA;US)
Geology
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Multiwell Experiment site geology, 11:31424 (RA;US)
Hydraulic Fracturing
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Information Systems
Development of the resource extraction data base to support the eastern gas shales, western gas sands, and coalbed methane programs, 11:31450 (RA;US)
Neutron Logging
Log analysis techniques for quantifying the permeability of sub-millidarcy sandstone reservoirs, 11:31386 (BA;US)
Permeability
Capillary pressures and gas relative permeabilities of low permeability sandstone, 11:31431 (BA;US)
Log analysis techniques for quantifying the permeability of sub-millidarcy sandstone reservoirs, 11:31386 (BA;US)
Measurement and study of stress variations within the Appalachian Basin of western New York, 11:31420 (RA;US)
Poisson Ratio
In-situ physical properties using crosswell acoustic data, 11:31429 (BA;US)
Porosity
In-situ physical properties using crosswell acoustic data, 11:31429 (BA;US)
Pressure Measurement
Capillary pressures and gas relative permeabilities of low permeability sandstone, 11:31431 (BA;US)
Research Programs
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Multiwell experiment, 11:31453 (RA;US)
Overview: Eastern gas shales, 11:31437 (RA;US)
Overview: western gas sands, 11:31446 (RA;US)
Resistivity Logging
Log analysis techniques for quantifying the permeability of sub-millidarcy sandstone reservoirs, 11:31386 (BA;US)
Resource Assessment
Eastern gas shales. Technology status report (Appalachian, Illinois and Michigan Basins), 11:31418 (R;US)
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)
Ordovician black shales: Devonian shale-oil study, 11:31419 (RA;US)
Overview: coalbed methane, 11:31441 (RA;US)
Overview: western gas sands, 11:31446 (RA;US)
Rock Mechanics
Multiwell fracturing experiments, 11:31454 (RA;US)
MWX reservoir engineering (Multiwell Experiment), 11:31456 (RA;US)
Seismic Surveys
In-situ physical properties using crosswell acoustic data, 11:31429 (BA;US)
Stratigraphy
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)
Geologic characterization of tight gas reservoirs, Piceance Basin, 11:31423 (RA;US)
Ordovician black shales: Devonian shale-oil study, 11:31419 (RA;US)
Stress Analysis
Measurement and study of stress variations within the Appalachian Basin of western New York, 11:31420 (RA;US)
Well Logging
Comprehensive well testing and modeling of pre- and post-fracture well performance of the MWX lenticular tight gas sands, 11:31428 (BA;US)
Fracturing and testing case study of paludal, tight, lenticular gas sands, 11:31430 (BA;US)
Young Modulus
In-situ physical properties using crosswell acoustic data, 11:31429 (BA;US)
NATURAL GAS DISTRIBUTION SYSTEMS
Pipes
Overview of plastic pipe research at Battelle, 11:31463 (J;US)
NATURAL GAS GATHERING SYSTEMS
See NATURAL GAS DISTRIBUTION SYSTEMS
NATURAL GAS INDUSTRY
Capitalized Cost
[Oil and gas investment and profitability projections. Final report] (USA), 11:31406 (R;US)
Pricing Regulations
Industrial pricing of natural gas: the historical perspective, 11:31435 (J;US)
NATURAL GAS LIQUIDS
Environmental Impacts
State of knowledge of environmental concerns related to natural-gas-fueled vehicles, 11:32151 (J;US)
Production
International energy statistical review. Monthly report, 11:31405 (R;US)
Regulations
State of knowledge of environmental concerns related to natural-gas-fueled vehicles, 11:32151 (J;US)
Safety
State of knowledge of environmental concerns related to natural-gas-fueled vehicles, 11:32151 (J;US)
NATURAL GAS POLICY ACT
Modifications
Analysis of the Department of Energy's Notice of Proposed Rulemaking (NOPR), "ceiling prices: old gas pricing structure", 11:31460 (R;US)
NATURAL GAS WELLS
Data Analysis
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Directional Drilling
Eastern gas shales. Technology status report, 11:31418 (R;US)

Fracture Mechanics
Coalbed methane stimulation analysis, 11:31444 (RA;US)
Fracturing
High energy gas fracture research, 11:31452 (RA;US)
Hydraulic Fracturing
A model of the hydraulic fracturing process for elongated vertical fractures and comparisons of results with other models, 11:31399 (BA;US)
An improved model for fluid-driven cracks in jointed rock, 11:31459 (BA;US)
Analysis of fracturing mechanisms in naturally fractured rocks, 11:31438 (RA;US)
Coalbed methane stimulation analysis, 11:31444 (RA;US)
Comprehensive well testing and modeling of pre- and post-fracture well performance of the MWX lenticular tight gas sands, 11:31428 (BA;US)
Fracturing and testing case study of paludal, tight, lenticular gas sands, 11:31430 (BA;US)
In-situ stress determination from wellbore elongation measurements, 11:31387 (BA;US)
In-situ stress state in the mounds test well as determined by the anelastic strain recovery method, 11:31401 (BA;US)
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
LLNL unconventional gas/western sands research, 11:31447 (RA;US)
Measurement of dynamic reservoir conditions, 11:31443 (RA;US)
Mineback stimulation research experiments, 11:31451 (RA;US)
Multiwell experiment, 11:31453 (RA;US)
Multiwell fracturing experiments, 11:31454 (RA;US)
Stimulation model for lenticular sands, 11:31448 (RA;US)
Western gas sands systems analysis, 11:31449 (RA;US)
Information Systems
Development of the resource extraction data base to support the eastern gas shales, western gas sands, and coalbed methane programs, 11:31450 (RA;US)
Mathematical Models
Evaluation of the effect of methane adsorption/desorption in well tests on coal beds, 11:31442 (RA;US)
Performance
Installation of a Devonian shale reservoir testing facility and acquisition of reservoir property measurements, 11:31440 (RA;US)
Production
Coalbed methane geostatistical analysis project, 11:31445 (RA;US)
Eastern gas shales. Technology status report, 11:31418 (R;US)
Overview: western gas sands, 11:31446 (RA;US)
Western gas sands systems analysis, 11:31449 (RA;US)
Reservoir Engineering
MWX reservoir engineering (Multiwell Experiment), 11:31456 (RA;US)
Rock-Fluid Interactions
Evaluation of the effect of methane adsorption/desorption in well tests on coal beds, 11:31442 (RA;US)
Stress Analysis
LLNL unconventional gas/Eastern Devonian shale research, 11:31439 (RA;US)
Testing
Eastern gas shales reservoir tester instrumentation development, 11:31432 (RA;US)
Evaluation of the effect of methane adsorption/desorption in well tests on coal beds, 11:31442 (RA;US)
Measurement of dynamic reservoir conditions, 11:31443 (RA;US)
Well Stimulation
Eastern gas shales. Technology status report, 11:31418 (R;US)
Overview: western gas sands, 11:31446 (RA;US)

NEMATODES
Energy Budgets
Elements of a nitrogen budget for a stream collector. Appendix IX, 11:32769 (R;US)
Physiology
Elements of a nitrogen budget for a stream collector. Appendix IX, 11:32769 (R;US)
NEOCLASSICAL TRANSPORT THEORY
Banana Regime
Effect of the poloidal current from the classical diffusion in the steady-state neo-classical transport, 11:33309 (R;BR;In Portuguese)
Pfirsch-Schlueter Regime
Effect of the poloidal current from the classical diffusion in the steady-state neo-classical transport, 11:33309 (R;BR;In Portuguese)
NEODYMIUM
Chemical Lasers
Chemical flashlamp pumping of Nd:glass, 11:32459 (BA;US)
NEODYMIUM 142 TARGET
Argon 40 Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Carbon 12 Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Oxygen 16 Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
NEODYMIUM COMPOUNDS
Physical Radiation Effects
Self-radiation damage in actinide host phases of nuclear waste forms ($Ca_4Nd_6(SiO_4)_6O_2$; $Gd_2Ti_2O_7$; $CaZrTi_2O_7$), 11:32243 (BA;US)
NEODYMIUM LASERS
Design
Multi-megajoule Nd: glass fusion laser design, 11:32454 (R;US)
NEON
Alpha Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Carbon 12 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Compression
Equation of state and metallization of neon, 11:32262 (J;US)
Equations of State
Equation of state and metallization of neon, 11:32262 (J;US)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
Oxygen 16 Reactions
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
NEON 20 REACTIONS
Equations of Motion
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)
Heavy Ion Fusion Reactions
Uranium target fragmentation by intermediate and high energy ^{12}C and ^{20}Ne, 11:33163 (RA;US)

NEON 22 REACTIONS
Fission
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
NEOPLASMS
Epidemiology
Radiation carcinogenesis, 11:32853 (J;US)
Neutron Therapy
Fast neutron beam radiotherapy: clinical program, 11:32818 (RA;US)
Radioinduction
Mortality studies of Hanford workers, 11:32850 (R;US)
Radiation carcinogenesis, 11:32853 (J;US)
Repair of neoplastic transformation damage following protracted exposures to ^{60}Co γ-rays, 11:32854 (J;GB)
NEPTUNIUM
Adsorption
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
Adsorption Isotherms
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Evaporation
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
Geochemistry
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Leaching
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
NEPTUNIUM 237
Carcinogenesis
Biology of neptunium, 11:32847 (R;DE;In German)
Intestinal Absorption
Biology of neptunium, 11:32847 (R;DE;In German)
Leaching
^{237}Np and ^{239}Pu solution behavior during hydrothermal testing of simulated nuclear waste glass with basalt and steel, 11:32302 (BA;US)
Tissue Distribution
Biology of neptunium, 11:32847 (R;DE;In German)
NEPTUNIUM 237 TARGET
Photonuclear Reactions
Study of ^{237}Np photonuclear reactions near threshold, induced by gamma rays from thermal neutron capture, 11:33167 (R;BR)
NEPTUNIUM FLUORIDES
Chemical Preparation
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
NEPTUNIUM OXIDES
Solubility
Solubility data for U(VI) hydroxide and Np(IV) hydrous oxide: application of MCC-3 methodology, 11:32357 (BA;US)
NERVA NUCLEAR ROCKET ENGINE

NEUTRON REACTIONS
NEUTRON CAPTURE
See NEUTRON REACTIONS
NEUTRON DETECTION
Radiation Detectors
Time resolved neutron spectrum measurements at the mirror fusion test facility, 11:33343 (J;US)
Tokamak Fusion Test Reactor neutron source strength measurements instrumentation and results, 11:33342 (J;US)
Scintillation Counters
Scintillation neutron detectors, 11:32593 (R;US)
NEUTRON DETECTORS
See also MODERATING DETECTORS
Calibration
Experiences in calibration of neutron survey instruments, 11:32633 (RA;US)
Design
Scintillation neutron detectors, 11:32593 (R;US)
Response Functions
Experiences in calibration of neutron survey instruments, 11:32633 (RA;US)
NEUTRON DIFFRACTOMETERS
Spatial Resolution
Specific features of neutron diffractional optics in simple and Soller collimations, 11:32646 (R;SU;In Russian)
NEUTRON DIFFUSION EQUATION
Analytical Solution
Steady-state equations of even flux and scattering, 11:33212 (R;FR;In French)
Numerical Solution
Problem of atomic diffusion in a moving boundary. Numerical study, 11:31867 (R;BR;In Portuguese)

NEUTRON DOSIMETRY
Neutron induced conductivity in trans-polyacetylene, 11:32249 (J;US)
Dielectric Track Detectors
Performance comparison of thorium track, polycarbonate, and CR-39 neutron dosimeters, 11:32639 (J;GB)
NEUTRON MATTER
See NUCLEAR MATTER
NEUTRON REACTIONS
Capture
Neutron capture cross section of ^{243}Am, 11:33171 (J;US)
Study on the aligned uranium-235 nuclear decay in the neutron energy range of 1.7 eV - 2.15 keV, 11:33166 (R;SU;In Russian)
Coupled Channel Theory
Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method, 11:33150 (R;SU;In Russian)
Cross Sections
Importance of level structure in nuclear reaction cross-section calculations. Revision 1, 11:33197 (R;US)
Neutron capture cross section of ^{243}Am, 11:33171 (J;US)
Neutron-photon multigroup cross sections for neutron energies ≦400 MeV. Revision 1 , 11:33095 (R;US)
Differential Cross Sections
Neutron inelastic scattering cross sections for states above 700 keV in ^{232}Th, 11:33172 (J;US)
Elastic Scattering
Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method, 11:33150 (R;SU;In Russian)
Neutron scattering cross sections from ^{14}N and ^{9}Be at 11, 14, and 17 MeV, 11:33118 (J;US)
Semimicroscopic calculations of elastic, inelastic, and total neutron scattering by ^{239}Pu in the energy range 10 keV < or =E/sub n/< or =10 MeV, 11:33170 (J;US)
Fission
Study on the aligned uranium-235 nuclear decay in the neutron energy range of 1.7 eV - 2.15 keV, 11:33166 (R;SU;In Russian)
Inelastic Scattering
Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method, 11:33150 (R;SU;In Russian)
Evidence for a coexisting four-particle, four-hole band in doubly closed subshell ^{96}Zr, 11:33145 (J;US)
Investigation of emission neutron spectra from thorium 232 and uranium 235 for the 6 MeV neutrons, 11:33165 (R;SU;In Russian)
Neutron inelastic scattering cross sections for states above 700 keV in ^{232}Th, 11:33172 (J;US)
Neutron scattering cross sections from ^{14}N and ^{9}Be at 11, 14, and 17 MeV, 11:33118 (J;US)
Semimicroscopic calculations of elastic, inelastic, and total neutron scattering by ^{239}Pu in the energy range 10 keV < or =E/sub n/< or =10 MeV, 11:33170 (J;US)
Prompt Gamma Radiation
Example of nuclear data center services for geophysics applications, 11:33094 (R;US)
NEUTRON SLOWING-DOWN THEORY
Legendre Polynomials
Multigroup Legendre coefficients for the diamond difference continuous slowing down operator, 11:33228 (J;US)
NEUTRON SOURCES
Excludes reactors even when used as neutron sources.
Neutron Flux
Additional measurements of the radiation environment at the Los Alamos Spallation Radiation Effects Facility at LAMPF, 11:32576 (R;US)
NEUTRON SPECTROMETERS
Performance
A high-pressure ^{3}He gas scintillation neutron spectrometer, 11:33340 (J;US)
NEUTRON THERAPY
Measurement of total body calcium by neutron activation, 11:32822 (RA;US)
RBE
Neutron radiobiology in support of radiotherapy, 11:32819 (RA;US)
Normal tissue neutron radiobiology, 11:32820 (RA;US)
NEUTRON TRANSPORT
Computer Codes
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
Computerized Simulation
Improvements in calculating neutron transmission probabilities in unit-cell interface-current codes, 11:33229 (J;US)
Monte Carlo Method
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
Numerical Analysis
Particle methods for Boltzmann equation, 11:33290 (R;FR;In French)
Probability
Improvements in calculating neutron transmission probabilities in unit-cell interface-current codes, 11:33229 (J;US)
NEUTRON TRANSPORT THEORY
See also MULTIGROUP THEORY
Monte Carlo Method
Non statistical Monte-Carlo, 11:33209 (R;FR)
NEUTRONS
Beta Decay
Effects of polarization and angular asymmetry of neutrino radiation in a magnetic field, 11:33017 (RA;SU;In Russian)
Magnetic Fields
Effects of polarization and angular asymmetry of neutrino radiation in a magnetic field, 11:33017 (RA;SU;In Russian)
Resonance Absorption
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
Scattering
Studies of the dynamic properties of materials using neutron scattering, 11:33223 (R;GB)
Slowing-Down
MCRP - a Monte Carlo resonance program for neutrons slowing down in single rod and rod cluster lattices, 11:31864 (R;AU)
NEVADA
Lava
Petrology and geochemistry of Hawaiite lavas from Crater Flat, Nevada (NNWSI project), 11:32904 (J;DE)
Radioactive Waste Facilities
Nevada Nuclear Waste Storage Investigations project plan, 11:31517 (R;US)
NEVADA TEST SITE
Fire Hazards
Fire protection review. Revisit No. 2, Nevada Test Site, Las Vegas, Nevada. Technical report, 11:32510 (R;US)
Granites
Instrumentation program for rock mechanics and spent fuel tests at the Nevada Test Site, 11:32885 (R;US)
NEW YORK
Natural Gas Deposits
Measurement and study of stress variations within the Appalachian Basin of western New York, 11:31420 (RA;US)
NEW ZEALAND
Commercial Buildings
Commercial-sector energy use in Christchurch. Final report, 11:32075 (R;US)
NEWTON MECHANICS
See CLASSICAL MECHANICS
NGL
See NATURAL GAS LIQUIDS
NICKEL
Annealing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Catalytic Effects
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)

Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Charged-Particle Transport
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
Chemical Reactions
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Crystal Structure
Study by synchrotron radiation of the superstructure of tetrataenite from the Saint-Severin meteorite, 11:32906 (R;BR)
Dislocations
Collapse of defect cascades to dislocation loops, 11:32166 (R;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Excitation
Temperature determinations in the inductively coupled plasma using a Fourier transform spectrometer, 11:32360 (J;GB)
Ion Implantation
Mechanisms and kinetics of ion implantation, 11:32214 (J;US)
Mixing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Physical Radiation Effects
Light ion irradiation creep, 11:32171 (RA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)
Toxicity
Antidotal efficacy of tetraethylenepentamine for acute nickel carbonyl poisoning in rats, 11:32865 (J;CH)

NICKEL 58
Compound Nuclei
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asysmetric entrance channels, 11:33119 (R;FR;In French)

NICKEL 58 TARGET
Oxygen 16 Reactions
Determination of a time scale for the emission of high energy photons in heavy ion fusion reactions, 11:33129 (RA;US)
Statistical GDR decays in ^{16}O + Ni for various Ni isotopes, 11:33126 (RA;US)

NICKEL 60
Compound Nuclei
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asysmetric entrance channels, 11:33119 (R;FR;In French)

NICKEL 61 TARGET
Oxygen 16 Reactions
Statistical GDR decays in ^{16}O + Ni for various Ni isotopes, 11:33126 (RA;US)

NICKEL 62
Compound Nuclei
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asysmetric entrance channels, 11:33119 (R;FR;In French)

NICKEL 64 TARGET
Oxygen 16 Reactions
Statistical GDR decays in ^{16}O + Ni for various Ni isotopes, 11:33126 (RA;US)

NICKEL ALLOYS
See also NICKEL BASE ALLOYS
NICKEL STEELS
Cathodic Protection
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Crystallization
Nucleation and growth in surface-melted crystalline and amorphous $Fe_{40}Ni_{40}P_{14}B_6$ alloys, 11:32216 (J;US)
Stability of amorphous metal films on semiconductor substrates. Progress report, January-December 1985 (W-Si; Ni-Nb), 11:32173 (R;US)
Hydridation
Use of metal hydrides for handling tritium, 11:33425 (J;US)
Microstructure
Complementary AES and AEM of grain boundary regions in irradiated γ'-strengthened alloys, 11:32161 (R;US)
Nucleation
Nucleation and growth in surface-melted crystalline and amorphous $Fe_{40}Ni_{40}P_{14}B_6$ alloys, 11:32216 (J;US)
Phase Transformations
Solid state transformations in Fe-Ni alloys from meteorites in powder form, 11:32910 (R;BR)
Physical Radiation Effects
Complementary AES and AEM of grain boundary regions in irradiated γ'-strengthened alloys, 11:32161 (R;US)
Stability and formation of $NiAl_3$ under ion irradiation, 11:32213 (J;US)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)

NICKEL ARSENIDES
Biological Availability
Biological availability of nickel arsenides: cellular response to soluble Ni_5As_2, 11:32859 (J;US)
Solubility
Biological availability of nickel arsenides: cellular response to soluble Ni_5As_2, 11:32859 (J;US)
Toxicity
Biological availability of nickel arsenides: cellular response to soluble Ni_5As_2, 11:32859 (J;US)

NICKEL BASE ALLOYS
Creep
Creep behavior of a polycrystalline nickel aluminide: Ni-23.5 at.% Al-0.5 at.% Hf-0.2 at.% B, 11:32215 (J;US)
Sorptive Properties
Long-term behavior of the tritides formed by nickel-based intermetallic compounds, 11:33426 (J;US)

NICKEL COMPLEXES
Pyrolysis
Pyrolyzed macrocycle/carbon blends for advanced electrocatalysts, 11:32256 (R;US)

NICKEL PHOSPHIDES
Catalytic Effects
Impurity modification of surface catalyzed reactions: Methanation over phosphided nickel, 11:31655 (B;US)

NICKEL SILICIDES
Physical Radiation Effects
Effect of dose rate on ion beam mixing in Nb-Si, 11:32202 (J;US)

NICKEL STEELS
Deformation
Correlation of acoustic emission to microstructural sources. Final technical report, 11:32200 (R;US)

NICKEL SULFATES
Solubility
Aqueous inorganic phase equilibria at high temperatures: some experimental, theoretical, and applied aspects, 11:32353 (J;GB)

NIOBATES
Specific compounds should be indexed by coordination of a descriptor in the form (CATION) COMPOUNDS and the above anion descriptor.
Crystal Doping
Ion beam processing of $LiNbO_3$, 11:32280 (J;US)
Elasticity
Elastic properties of $LaNbO_4$, 11:32251 (R;US)
Ion Implantation
Ion beam processing of $LiNbO_3$, 11:32280 (J;US)
Ultrasonic Waves
Elastic properties of $LaNbO_4$, 11:32251 (R;US)

NIOBIUM
Deformation
Diffraction study in a selected area of the deformation field around cracks of Nb-H, 11:32187 (RA;BR;In Portuguese)

Metallurgical Effects
Effect of the hypo and hyperstoichiometry of niobium about the solidification of steel with medium carbon content, 11:32183 (RA;BR;In Portuguese)
Use of niobium as a substitute to molybdenum in steels with high oxidation resistance, 11:32190 (RA;BR;In Portuguese)
Neutron Diffraction
Phonon anomalies and linewidths in Nb at 10 K, 11:32206 (J;US)
Oxidation
Superficial oxidation in mono and polycrystalline niobium films for Josephson joints, 11:32192 (RA;BR;In Portuguese)
Phonons
Phonon anomalies and linewidths in Nb at 10 K, 11:32206 (J;US)
Physical Radiation Effects
Effect of electronic radiation in Nb monocrystals, 11:32193 (RA;BR;In Portuguese)
Segregation
Niobium segregation in the austenitic grain boundary, 11:32184 (RA;BR;In Portuguese)
X-Ray Spectra
Excitation cross section of characteristic X-ray radiation by protons and ^{4}He ions for elements with Z within 22 <= Z <= 83 range, 11:33220 (R;SU;In Russian)

NIOBIUM 92
Abundance
Search for ^{92}Nb in nature, 11:33139 (RA;US)
Decay
Search for ^{92}Nb in nature, 11:33139 (RA;US)

NIOBIUM 93 REACTIONS
Equations of Motion
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)

NIOBIUM 93 TARGET
Niobium 93 Reactions
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)

NIOBIUM ALLOYS
Corrosion
Corrosion and hydriding of fuel cladding materials, 11:31802 (RA;XA)
Critical Current
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Crystallization
Stability of amorphous metal films on semiconductor substrates. Progress report, January-December 1985 (W-Si; Ni-Nb), 11:32173 (R;US)
Current Density
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electric Conductivity
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electron Beam Melting
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Josephson Effect
Josephson oscillations of charge density waves, 11:33245 (R;US)
Oxidation
Oxidation behavior of Zr and its alloys, 11:32191 (RA;BR;In Portuguese)
Phase Studies
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)

NIOBIUM CARBIDES
Physical Radiation Effects
Study on the thermonuclear energy ion interaction with a surface of carbon containing structural materials for thermonuclear reactors, 11:33403 (R;SU;In Russian)

NIOBIUM IONS
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)

NITRATES

PETN
THORIUM NITRATES
URANIUM NITRATES
URANYL NITRATES
Removal
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)

NITRIC ACID
Solvent Properties
Contribution to the modelization of liquid-liquid extraction systems. Application to metallic nitrate extraction by TBP in nitric medium, 11:31479 (R;FR;In French)

NITRIC OXIDE
NO.
Air Pollution Monitoring
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
Atmospheric Chemistry
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Chemical Preparation
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Chemical Reaction Kinetics
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Chemical Reactions
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Crystal Structure
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)

NITRILES
Chemical Preparation
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Chemical Reactions
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)
Crystal Structure
First insertion of NO into a transition-metal cluster-carbon bond: regioselective formation, structure, and reactions of the first alkanenitrile oxide complexes, 11:32370 (J;US)

NITRO COMPOUNDS
See also DINITROPHENOL
TNT
Carcinogenesis
Carcinogenic responses to chemicals applied directly to rat mammary glands in situ, 11:32862 (J;US)

NITROGEN
Crystal Structure
Rhombohedral phase stability of the group-VA elements, 11:32265 (J;US)
Electron-Molecule Collisions
Energy balance for secondary plasma electrons produced by a high power electron beam propagating in gas mixture: theoretical and experimental study, 11:32936 (R;FR;In French)
Equations of State
Electron—gas plus damped-dispersion calculation of the N_2—N_2 interaction, 11:32949 (J;US)
Intermolecular Forces
Electron—gas plus damped-dispersion calculation of the N_2—N_2 interaction, 11:32949 (J;US)

Nuclear Reaction Analysis
Neutron induced particle track mapping of elemental distributions, 11:32340 (R;US)
NITROGEN 14
Energy Levels
Theory of the ^{14}N parity mixing measurement, 11:33112 (RA;US)
NITROGEN 14 REACTIONS
Heavy Ion Fusion Reactions
Survivance of complete fusion for the $^{14}N+^{27}Al$ system, 11:33122 (R;FR)
Incomplete Fusion Reactions
Survivance of complete fusion for the $^{14}N+^{27}Al$ system, 11:33122 (R;FR)
NITROGEN 14 TARGET
Alpha Reactions
Alpha-particle cross section relevant to gamma-ray astronomy, 11:33105 (RA;US)
Neutron Reactions
Neutron scattering cross sections from ^{14}N and ^{9}Be at 11, 14, and 17 MeV, 11:33118 (J;US)
NITROGEN 15 TARGET
One-Nucleon Transfer Reactions
New scheme for the calibration of sub-Coulomb heavy ion proton transfer reactions, 11:33110 (RA;US)
NITROGEN 16
Energy Levels
Lifetime and magnetic moments of states of ^{16}N by the recoil-into-vacuum method, 11:33113 (RA;US)
NITROGEN DIOXIDE
NO_2.
Air Pollution Monitoring
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
Atmospheric Chemistry
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Chemical Reaction Kinetics
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Ecological Concentration
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
NITROGEN NITRIDES

NITROGEN DIOXIDE
Air Pollution Control
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
Air Pollution Monitoring
Developing an industrial boiler inventory, 11:32113 (J;US)
Control
Environmental assessment of an enhanced-oil-recovery steam generator equipped with a low-NOx burner. Volume 1. Technical results. Final report, January 1984-January 1985, 11:31394 (R;US)
Environmental assessment of NH_3 injection for an industrial package boiler. Volume 1. Technical results. Final report, January 1983-January 1984, 11:32518 (R;US)
EPA's LIMB (Environmental Protection Agency's Limestone Injection Multistage Burner) research, development, and demonstration program. Report for September 1984-January 1986, 11:31784 (R;US)
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)
Ecological Concentration
Measurements of the emissions from stationary diesel engines used in total energy plants and heat pumps, 11:32131 (R;DE;In German)
Emission
Vehicle evaporative and exhaust emissions as influenced by benzene content of gasoline. Final report, 11:32132 (R;US)
Measuring Instruments
NO/NO/sub x/ analyses in gaseous effluent containing high concentrations of CO_2 and CH_4 using the TECO model 10AR chemiluminescent NO/NO/sub x/ analyzer, 11:31395 (R;US)
Measuring Methods
NO/NO/sub x/ analyses in gaseous effluent containing high concentrations of CO_2 and CH_4 using the TECO model 10AR chemiluminescent NO/NO/sub x/ analyzer, 11:31395 (R;US)
Pollution Control
Low-NOx staged gas turbine combustor concept for coal-water slurry application, 11:31371 (J;US)
Quantitative Chemical Analysis
NO/NO/sub x/ analyses in gaseous effluent containing high concentrations of CO_2 and CH_4 using the TECO model 10AR chemiluminescent NO/NO/sub x/ analyzer, 11:31395 (R;US)
Reduction
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
Removal
Development of advanced residential range burners with low NOx characteristics. Phase 2. Final report, 11:32074 (R;US)
Environmental assessment of NOx control on a compression-ignition large-bore reciprocating internal-combustion engine. Volume 1. Technical results. Final report, April 1980-April 1981, 11:32146 (R;US)
Environmental assessment of NOx control on a compression ignition large-bore reciprocating internal-combustion engine. Volume 2. Data supplement. Final report, April 1980-April 1981, 11:32147 (R;US)
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 1. Technical results. Final report, April 1980-June 1981, 11:32149 (R;US)
Environmental assessment of NOx control on a spark-ignited large bore reciprocating internal combustion engine. Volume 2. Data supplement. Final report, April 1980-June 1981, 11:32150 (R;US)

Air Pollution Abatement
Barge-loading facilities: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32723 (R;US)
Bulk plants: technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee. Summary report, 11:32724 (R;US)
Offset-lithography summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32720 (R;US)
Solvent extraction: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32722 (R;US)
Air Pollution Monitoring
Cost-effective monitoring of mixtures of volatile organic compounds (VOC) in residences, 11:32707 (R;US)
Ecological Concentration
Cost-effective monitoring of mixtures of volatile organic compounds (VOC) in residences, 11:32707 (R;US)
Removal
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
Superconductivity
Ambient-pressure superconductivity at the highest temperature (5 K) observed in an organic system: β-(BEDT-TTF)$_2$AuI$_2$, 11:32245 (J;US)
Volatile Matter
Barge-loading facilities: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32723 (R;US)
Bulk plants: technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee. Summary report, 11:32724 (R;US)
Offset-lithography summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32720 (R;US)
Solvent extraction: summary report for technical support in development of a revised ozone State Implementation Plan for Memphis, Tennessee, 11:32722 (R;US)
ORGANIC ION EXCHANGERS
Radiolysis
Effects of ionizing radiations on synthetic organic ion exchangers, 11:32387 (J;CH)
ORGANIC NITROGEN COMPOUNDS
Excluding PROTEINS, AMINES, ALKALOIDS, AMINO ACIDS, NUCLEIC ACIDS, and NUCLEOTIDES.
See also NITRILES
NITRO COMPOUNDS
PORPHYRINS
Hydrogenation
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)
ORGANIC PHOSPHORUS COMPOUNDS
Excluding NUCLEIC ACIDS and NUCLEOTIDES.
Catalytic Effects
Homogeneous catalytic hydrogenation. 4. Regioselective reduction of polynuclear heteroaromatic compounds catalyzed by hydridochlorotris(triphenylphosphine)ruthenium(II), 11:32374 (J;US)
ORGANIC SOLVENTS
Chemical Composition
Method for extracting lanthanides and actinides from acid solutions, 11:31546 (P;US)
Comparative Evaluations
Use of non-coal-derived heavy solvents in direct liquefaction of Wyodak coal (Coprocessing with six heavy oils), 11:31308 (RA;US)
Recycling
ChemCoal process for the chemical transformation of low rank coal, 11:31302 (RA;US)
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Reviews
Use of non-coal-derived heavy solvents in direct liquefaction of Wyodak coal (Coprocessing with six heavy oils), 11:31308 (RA;US)
ORGANIZATION ECONOMIC CO-OPERATION AND DE
See OECD
ORGANOMETALLIC COMPOUNDS
For compounds of metals and semimetals with organic compounds, but only when the metal or semimetal is directly bound to carbon.
Dielectric Materials
Dielectric effects in biopolymers: the theory of ionic saturation revisited, 11:32373 (J;US)
ORGDP
Accidents
Investigation of a uranium hexafluoride release incident on September 17, 1975 in the K-1423 Toll Enrichment Facility (U). Revision 1, 11:31604 (R;US)
Safety
Seismic vulnerability study of the nation's uranium enrichment plants, 11:32488 (RA;US)

ORNL
Personnel Dosimetry
Performance comparison of thorium track, polycarbonate, and CR-39 neutron dosimeters, 11:32639 (J;GB)
Radiation Accidents
Type B investigation report of curium-244 exposure at the ORNL TRU Facility, January 15, 1986, 11:32849 (R;US)
Radioactive Waste Storage
Cleanout of waste storage tanks at Oak Ridge National Laboratory, 11:31562 (BA;US)

Chlorination
A molten salt reactor for dispersed solid phase chlorination, 11:31347 (B;US)
OXYGEN
Chemical Reaction Kinetics
Nonstatistical effects and detailed balance in quasiclassical trajectory calculations of the thermal rate coefficient for $O+OH \rightarrow O_2+H$, 11:32348 (J;US)
Role of the radical pool in combustion, 11:32399 (R;US)
Reduction
Oxygen reduction in tetrafluoroethane-1,2-disulfonic acid, 11:32034 (J;US)
OXYGEN 16
Energy-Level Transitions
Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states, 11:33106 (RA;US)
OXYGEN 16 REACTIONS
Cascade Theory
Associative production of fast fragments emitted backward in nucleus-nucleus collisions, 11:33192 (R;SU;In Russian)
Compound-Nucleus Reactions
Statistical GDR decays in ^{16}O + Ni for various Ni isotopes, 11:33126 (RA;US)
Heavy Ion Fusion Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Determination of a time scale for the emission of high energy photons in heavy ion fusion reactions, 11:33129 (RA;US)
Ho target fragmentation induced by intermediate energy ^{12}C and ^{16}O, 11:33149 (RA;US)
Incomplete and complete fusion studies at intermediate energies. Part I, 11:33148 (RA;US)
Incomplete Fusion Reactions
Complete and incomplete fusion studies at intermediate energies. Part II, 11:33142 (RA;US)
Incomplete and complete fusion studies at intermediate energies. Part I, 11:33148 (RA;US)
OXYGEN 16 TARGET
Alpha Reactions
Alpha-particle cross section relevant to gamma-ray astronomy, 11:33105 (RA;US)
Penetrability of the centrifugal barrier and the spin distribution of the compound nucleus, 11:33109 (RA;US)
Antiproton Reactions
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
Carbon 12 Reactions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Nuclear rainbow scattering with carbon isotopes, 11:33108 (RA;US)
Magnesium 24 Reactions
Reactions of ^{24}Mg with ^{16}O, 11:33111 (RA;US)
Photonuclear Reactions
Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states, 11:33106 (RA;US)
OXYGEN 18
Isotope Effects
Oxygen isotope effect on the 889 cm^{-1} band in silicon, 11:32260 (J;US)
OXYGEN 18 TARGET
Antiproton Reactions
Elastic and inelastic scattering of 30 MeV and 180 MeV antiprotons on nuclei, 11:33104 (R;FR;In French)
OXYGEN EFFECT (RADIOBIOLOGY)
See OXYGEN
OXYGEN FLUORIDES
See FLUORINE OXIDES
OXYGEN HYDRIDES
See WATER
OXYGEN IONS
Electron-Ion Collisions
Distorted-wave calculations of dielectronic recombination as a function of electric field strength, 11:32957 (J;US)
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
OXYMETHYLENE
See FORMALDEHYDE
OYSTER CREEK-1 REACTOR
Forked River, New Jersey, USA
Nuclear Fuels
Extended Burnup Demonstration Reactor Fuels program. Final project report, 11:31793 (R;US)
OZONE
Air Pollution
Air quality criteria for ozone and other photochemical oxidants. External Review Draft No. 2. Volume 1, 11:32718 (R;US)

Air quality criteria for ozone and other photochemical oxidants. External Review Draft No. 2. Volume 5, 11:32719 (R;US)
Health Hazards
Air quality criteria for ozone and other photochemical oxidants. External Review Draft No. 2. Volume 1, 11:32718 (R;US)
Air quality criteria for ozone and other photochemical oxidants. External Review Draft No. 2. Volume 5, 11:32719 (R;US)

PACIFIC OCEAN
Aquatic Ecosystems
Progress research report, 27 June, 1983, benthic invertebrate studies, 11:31527 (RA;US)
Benthos
Benthic megafauna at deep-sea study areas W-N and E-N, 11:31528 (RA;US)
Progress research report, 27 June, 1983, benthic invertebrate studies, 11:31527 (RA;US)
Isotope Ratio
Interim status report: radiochemical studies in support of the low Level Waste Ocean Disposal Program, 11:31530 (RA;US)
Oceanic Circulation
Oceanographic studies through December 1982 at Pacific study area W-N, 11:31524 (RA;US)
Oceanic Crust
Convection in the oceanic crust: Simulation of observations from deep sea drilling project hole 504B, Costa Rica Rift, 11:32883 (J;US)
Oceanography
Cruise report for R/V Wecoma cruises W8209A & B to Pacific study area W-N, September - October 1982, 11:31522 (RA;US)
Oceanographic studies through December 1982 at Pacific study area W-N, 11:31524 (RA;US)
Sediments
Data report on sediment cores collected on cruise W8103-A, Pacific study area W-N, 11:31523 (RA;US)
Oceanographic studies through December 1982 at Pacific study area W-N, 11:31524 (RA;US)
PACKAGING
Materials Testing
WIPP waste package testing on simulated DHLW: emplacement, 11:31552 (BA;US)
Performance Testing
Role of statistics in characterizing nuclear waste package behavior, 11:31561 (BA;US)
WIPP waste package testing on simulated DHLW: emplacement, 11:31552 (BA;US)
PADUCAH PLANT
Safety
Seismic vulnerability study of the nation's uranium enrichment plants, 11:32488 (RA;US)
PAH
See POLYCYCLIC AROMATIC HYDROCARBONS
PALLADIUM
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
PALLADIUM 102
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)
PALLADIUM 104
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)
PALLADIUM 106
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)
PALLADIUM 108
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)
PALLADIUM 110
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)
PALLADIUM NITRATES
Solvent Extraction
Contribution to the modelization of liquid-liquid extraction systems. Application to metallic nitrate extraction by TBP in nitric medium, 11:31479 (R;FR;In French)
PALO DURO BASIN
Brines
Behavior of natural uranium, thorium, and radium isotopes in the Wolfcamp brine aquifers, Palo Duro Basin, Texas, 11:31594 (BA;US)
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
PALO VERDE-1 REACTOR
Wintersburg, Arizona
Reactor Operation
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
PALO VERDE-2 REACTOR
Wintersburg, Arizona
Reactor Operation
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
PALO VERDE-3 REACTOR
Wintersburg, Arizona
Reactor Operation
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
Reactor Safety
Safety evaluation report related to the operation of Palo Verde Nuclear Generating Station, Units 1, 2, and 3 (Docket Nos. STN 50-528, 50-529 and 50-530, 11:31910 (R;US)
PAPER
Drying
High-intensity drying processes, report one, 11:32097 (R;US)
PAPER INDUSTRY
Air Pollution Abatement
Field-inspection notebook for monitoring total reduced sulfur (TRS) from kraft pulp mills, 11:32717 (R;US)
Energy Efficiency
Rebuilding a paper machine press part to give increased water removal with control of moisture profile. A demonstration project at the Aylesford Mill of Reed Paper and Board (UK) Ltd. [Maidstone], 11:32105 (R;GB)
Presses
Rebuilding a paper machine press part to give increased water removal with control of moisture profile. A demonstration project at the Aylesford Mill of Reed Paper and Board (UK) Ltd. [Maidstone], 11:32105 (R;GB)

PARABOLIC DISH COLLECTORS
Design
Design and performance predictions of the DOE small community solar experiment at Osage City, Kansas, 11:31733 (R;US)
Performance Testing
Design and performance predictions of the DOE small community solar experiment at Osage City, Kansas, 11:31733 (R;US)
Solar Heat Engines
Heat engine development for solar thermal dish-electric power plants, 11:31732 (R;US)
PARABOLIC POINT COLLECTORS
See PARABOLIC DISH COLLECTORS
PARAFFINS
See ALKANES
PARAMETRIC INSTABILITIES
Instability Growth Rates
Nonlinear lower hybrid wave depletion, 11:33377 (J;US)
Plasma Waves
Nonlinear lower hybrid wave depletion, 11:33377 (J;US)
PARTIAL DIFFERENTIAL EQUATIONS
See also BOLTZMANN-VLASOV EQUATION
FOKKER-PLANCK EQUATION
NAVIER-STOKES EQUATIONS
POISSON EQUATION
WAVE EQUATIONS
Mesh Generation
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
PARTICLE BEAMS
Acceleration
Design desiderata for a laminar flow quadrupole-focused acceleration column, 11:32542 (J;US)
Transverse-field focusing accelerator, 11:32541 (J;US)
Beam Currents
Transverse-field focusing accelerator, 11:32541 (J;US)
Beam Optics
Transverse-field focusing accelerator, 11:32541 (J;US)
Focusing
Transverse-field focusing accelerator, 11:32541 (J;US)
Polarization
Resonance due to a local spin rotator in high-energy accelerators, 11:32555 (J;US)
PARTICLE INTERACTIONS
See also HADRON-HADRON INTERACTIONS
QUARK-GLUON INTERACTIONS
Reviews
Experiments at CERN in 1985, 11:32985 (R;XC)
PARTICLE PRODUCTION
Quark Model
Meson resonance production in the parton model with account for transverse quark motion, 11:33016 (RA;SU;In Russian)
PARTICULATES
Prior to September 1981, this concept was indexed to PARTICLES and AEROSOLS.
Chemical Analysis
Trace element concentrations on fine particles in the Ohio River Valley, 11:32721 (R;US)
Combustion
Group combustion of coal particles. Quarterly progress report No. 2, December 15, 1985-March 15, 1986, 11:31368 (R;US)
Deposition
Study of deposition control using transpiration. Technical progress report, 11:32466 (R;US)
Ecological Concentration
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
Sampling
Trace element concentrations on fine particles in the Ohio River Valley, 11:32721 (R;US)
PASSIVE SOLAR COOLING SYSTEMS
Design
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
Heat Transfer
Heat distribution by natural convection, 11:31759 (BA;CA)
PASSIVE SOLAR HEATING SYSTEMS
See also DIRECT GAIN SYSTEMS
Auxiliary Heating
Passive solar/gas technology characterization and development. Final report, December 1982-March 1985, 11:31754 (R;US)
Computer-Aided Design
Passive solar design: SUPERCALC performs SLR, 11:31745 (RA;US)
SDA/ONE: heat load analysis, 11:31748 (RA;US)
Design
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
Energy Signatures: a proposed new design tool, 11:31755 (R;US)
Feasibility Studies
Solar sun space, 11:31747 (RA;US)
Heat Transfer
A self-pumping vapor system for hybrid space heating, 11:31760 (BA;CA)
Heat distribution by natural convection, 11:31759 (BA;CA)
Natural Convection
Energy transport using natural convection boundary layers, 11:31757 (R;US)
Performance
Microprocessors based hot wire anemometry system for measuring convection air movement within the CSU Class A passive solar test facility, 11:31739 (RA;US)
Use of microcomputers for performance evaluation of residential buildings, 11:31738 (RA;US)
Performance Testing
Passive space heating with a self-pumping vapor system, 11:31752 (R;US)
Research Programs
Passive solar in China: traditional and new, 11:31756 (R;US)
Reviews
The gap between active and passive solar heating, 11:31758 (BA;CA)
Self-Pumping Systems
A self-pumping vapor system for hybrid space heating, 11:31760 (BA;CA)
Passive space heating with a self-pumping vapor system, 11:31752 (R;US)
Simulation
Energy Signatures: a proposed new design tool, 11:31755 (R;US)
Solar Collectors
Skyline Plot Program, 11:31741 (RA;US)
PDX DEVICES
Mathematical Models
Two-chamber model for divertors with plasma recycling, 11:33382 (J;US)
Neutral Atom Beam Injection
Electromagnetic emission from a neutral-beam-injected plasma, 11:33351 (J;AT)
Plasma Heating
Study of the effect of localized ECH on transport and stability in plasmas, 11:33380 (J;US)
Plasma Simulation
Study of the effect of localized ECH on transport and stability in plasmas, 11:33380 (J;US)
PEARL SPAR
See ANKERITE
DOLOMITE
PEAT
Sorptive Properties
Managing vegetation on peat-sand filter beds for wastewater disposal. Forest Service research note, 11:32782 (R;US)
PEATLANDS
See WETLANDS
PEBBLE BED REACTORS
Design
Gas cooled reactor concepts for space applications, 11:31856 (BA;US)

Method for routine determination of fluoride in urine by selective ion- electrode, 11:32841 (R;BR;In Portuguese)
PETN
Detonation Limits
Supercritical fluid phase separations: Implications for detonation properties of condensed explosives, 11:32685 (J;US)
PETRA STORAGE RING
Beam Dynamics
Longitudinal-transverse mode coupling in localized structures with orbit dependent higher order mode losses, 11:32547 (R;DE)
PETROLEUM
Limited to crude oil; see also COAL LIQUIDS, SHALE OIL, etc.
API Gravity
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Demand Factors
Energy outlook for the eighties, 11:31411 (J;US)
Density
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Ecological Concentration
Burrowing behavior of sand lance, Ammodytes hexapterus: effects of oil-contaminated sediment, 11:31414 (J;GB)
Energy Models
[Oil and gas investment and profitability projections. Final report], 11:31406 (R;US)
Energy Source Development
Energy trends in the near term, 11:32016 (J;US)
Enhanced Recovery
Determining possible correlations between pseudo Dykstra-Parsons coefficient and deposystem types (26 DOE EOR projects), 11:31393 (R;US)
Environmental Effects
Burrowing behavior of sand lance, Ammodytes hexapterus: effects of oil-contaminated sediment, 11:31414 (J;GB)
Extraction
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Imports
Energy trends in the near term, 11:32016 (J;US)
Market
Monthly energy review, January 1986, 11:32018 (R;US)
Petroleum supply monthly, February 1986, 11:31407 (R;US)
Short-term energy outlook. Quarterly projections, April 1986 (USA), 11:31408 (R;US)
Prices
Impact of lower world oil prices and alternative energy tax proposals on the US economy, 11:31409 (R;US)
Monthly energy review, January 1986, 11:32018 (R;US)
Short-term energy outlook. Quarterly projections, April 1986 (USA), 11:31408 (R;US)
Production
Multi-pattern low-tension demonstration flood big muddy field. Technical progress report, January-March 1986, 11:31389 (R;US)
Short-term energy outlook. Quarterly projections, April 1986 (USA), 11:31408 (R;US)
Solubility
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Solvent Properties
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Steam Injection
Environmental assessment of an enhanced-oil-recovery steam generator equipped with a low-NOx burner. Volume 1. Technical results. Final report, January 1984-January 1985, 11:31394 (R;US)
Storage Facilities
Laboratory investigation for determination of the hydraulic fracture gradient in salt. Final report, 11:31415 (R;DE;In German)
Supply and Demand
Annual Energy Review, 1985, 11:32028 (R;US)

Swelling
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)
Taxes
Impact of lower world oil prices and alternative energy tax proposals on the US economy, 11:31409 (R;US)
Underground Storage
Laboratory investigation for determination of the hydraulic fracture gradient in salt. Final report, 11:31415 (R;DE;In German)
Physical and numerical simulations of fluid-filled cavities in a creeping material, 11:31416 (BA;US)
Viscosity
Heavy oil recovery by CO_2 immiscible displacement method, 11:31390 (R;US)

PHOTON TRANSPORT
Analytical Solution
Generalized solutions of the radiative transfer equations in a singular case, 11:33210 (R;FR)
Monte Carlo Method
Application of Monte Carlo method in modelling physical and physico-chemical processes. Seminar proceedings, 11:33218 (R;CS;In Czech)
Temperature variance study in Monte-Carlo photon transport theory, 11:33213 (R;FR;In French)
Nonlinear Problems
Generalized solutions of the radiative transfer equations in a singular case, 11:33210 (R;FR)
Temperature Dependence
Temperature variance study in Monte-Carlo photon transport theory, 11:33213 (R;FR;In French)
PHOTON-NUCLEON INTERACTIONS
Quantum Chromodynamics
QCD asymmetry and measurement of structure functions of polarized hadron, 11:33069 (R;SU;In Russian)
PHOTONS
Perturbation Theory
Response of ideal photodetectors to photon flux and/or energy flux, 11:32591 (R;US)
Photodetectors
Response of ideal photodetectors to photon flux and/or energy flux, 11:32591 (R;US)
PHOTONUCLEAR REACTIONS
Breakup Reactions
Study of ^{237}Np photonuclear reactions near threshold, induced by gamma rays from thermal neutron capture, 11:33167 (R;BR)
Excitation
Forward-to-backward asymmetries in the (γ,n) reactions around the E2 isovector giant resonance, 11:33153 (RA;US)
Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states, 11:33106 (RA;US)
Inelastic Scattering
Equilibration of ^{176}Lu/sup g,m/ under stellar conditions, 11:32913 (RA;US)
PHOTOVOLTAIC CELLS
See also SOLAR CELLS
Certification
Status of IEC, ASTM, and IEEE photovoltaic standards, 11:31709 (RA;US)
Computerized Simulation
Photovoltaic array performance simulation models, 11:31715 (RA;US)
Electrical Properties
Solar simulators and I-V measurement methods, 11:31702 (RA;US)
Encapsulation
Encapsulant selection and durability testing experience, 11:31693 (RA;US)
Performance
Characterization of photovoltaic array performance - an overview, 11:31711 (RA;US)
Photovoltaic concentrator cell measurement methods, 11:31705 (RA;US)
Photovoltaic flat-plate array and insolation measurements, 11:31712 (RA;US)
Photovoltaic array loss mechanisms, 11:31714 (RA;US)
Photovoltaic array performance simulation models, 11:31715 (RA;US)
PV concentrator array field performance measurement, 11:31713 (RA;US)
Spectral solar irradiance models and data sets, 11:31672 (RA;US)
System and module rating: advertised versus actual capability, 11:31710 (RA;US)
Translation of device performance measurements to reference conditions, 11:31704 (RA;US)
Performance Testing
Outdoor photovoltaic device performance testing, 11:31703 (RA;US)
Power Losses
Photovoltaic array loss mechanisms, 11:31714 (RA;US)
Quantum Efficiency
System and module rating: advertised versus actual capability, 11:31710 (RA;US)
Simulation
Solar simulators and I-V measurement methods, 11:31702 (RA;US)
Spectral Response
Spectral solar irradiance instrumentation and measurement techniques, 11:31673 (RA;US)
Standards
Status of IEC, ASTM, and IEEE photovoltaic standards, 11:31709 (RA;US)
PHOTOVOLTAIC CONVERSION
Research Programs
Annual progress report: photovoltaics, FY 1985, 11:31676 (R;US)
PHOTOVOLTAIC POWER PLANTS
Computer-Aided Design
Employing a spreadsheet for photovoltaic design, 11:31727 (RA;US)
Computerized Control Systems
1-MW/sub AC/ photovoltaic SMUDPY1 control and data acquisition system, 11:31725 (RA;US)
Data Acquisition Systems
1-MW/sub AC/ photovoltaic SMUDPY1 control and data acquisition system, 11:31725 (RA;US)
Design
Design of an intermediate-sized, autonomous photovoltaic-diesel power plant, 11:31729 (R;US)
Hybrid Systems
Design of an intermediate-sized, autonomous photovoltaic-diesel power plant, 11:31729 (R;US)
Optimization
Application of spreadsheet software for photovoltaic power plant optimization, 11:31728 (RA;US)
Performance
Application of spreadsheet software for photovoltaic power plant optimization, 11:31728 (RA;US)
Photovoltaic/wind system performance programs, 11:31726 (RA;US)
PHOTOVOLTAIC POWER SUPPLIES
Bibliographies
US photovoltaic patents, 1951-1983, 11:31716 (R;US)
Electrical Properties
Photovoltaic array simulation program, 11:31724 (RA;US)
Patents
US photovoltaic patents, 1951-1983, 11:31716 (R;US)
Performance
Photovoltaic system performance model, 11:31723 (RA;US)
PHWR TYPE REACTORS
Reactor Cooling Systems
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
Water Chemistry
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
PHYSICAL AND TECHNICAL RESEARCH REACTOR M
See RPT REACTOR
PHYTOPLANKTON
Population Dynamics
Factors affecting development of a summer, cyanophyta-dominated phytoplankton community in a mainstem Tennessee River reservoir, 11:32789 (R;US)
PICEANCE CREEK BASIN
Natural Gas Deposits
Fracturing and testing case study of paludal, tight, lenticular gas sands, 11:31430 (BA;US)

PICOLINIC ACID
Leaching
Leachability of decontamination reagents from cement waste forms, 11:32323 (BA;US)
PIGE ANALYSIS
See PROTON REACTIONS
PIGMENT CELLS
See ANIMAL CELLS
PIGMENTS
PIGMENTS
Biosynthesis
Eye pigment granules of Drosophica melangogaster: isolation and characterization for synthesis of sepiapterin and precursors of drosopterin, 11:32805 (J;GB)
Chemical Composition
Eye pigment granules of Drosophica melangogaster: isolation and characterization for synthesis of sepiapterin and precursors of drosopterin, 11:32805 (J;GB)
PINELLAS PLANT
Computer Networks
Implementation of disk sharing between two network management consoles on an Ungermann-Bass local area network, 11:33468 (R;US)
Management
Implementation of disk sharing between two network management consoles on an Ungermann-Bass local area network, 11:33468 (R;US)
PINNING FORCE
See MAGNETIC FLUX
PION MINUS REACTIONS
Inclusive Interactions
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)
Nuclear Reaction Yield
Inclusive production of protons with energies of 80-240 MeV in the pHe^4 - and $\pi^- He^4$ interactions, 11:33102 (R;SU;In Russian)
Neutron-to-proton ratios in pA and π^{+-} A interactions, 11:33189 (R;SU)
Particle Production
Angular distribution of p, d and π from the π^- (5 GeV/c) + A(C, Pb) $\rightarrow$ a(p,d,π) + X reaction near 180 deg in l.s. , 11:32986 (R;SU;In Russian)
Scattering
Measurement of π^+/π^- cross section ratio for the giant quadrupole resonance in ^{208}Pb, 11:33159 (J;US)
PION MINUS-PROTON INTERACTIONS
Limiting Fragmentation
Quark (diquark) fragmentation in soft π^- p interactions at P=40 GeV/c, 11:32987 (R;SU)
Particle Production
Observation of kinematic resonance reflection in mass spectra of multiparticle reactions, 11:33021 (R;SU;In Russian)
Scattering Amplitudes
New strict finite-energy upper and lower boundaries for hadron scattering amplitudes, 11:33015 (RA;SU;In Russian)
PION PLUS REACTIONS
Nuclear Reaction Yield
Neutron-to-proton ratios in pA and π^{+-} A interactions, 11:33189 (R;SU)
Scattering
Inclusive scattering of pions from very light nuclei at 100 MeV, 11:33101 (RA;US)
Measurement of π^+/π^- cross section ratio for the giant quadrupole resonance in ^{208}Pb, 11:33159 (J;US)
PION PLUS-PROTON INTERACTIONS
Scattering Amplitudes
New strict finite-energy upper and lower boundaries for hadron scattering amplitudes, 11:33015 (RA;SU;In Russian)
PION REACTIONS
See also PION MINUS REACTIONS
PION PLUS REACTIONS
Elastic Scattering
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
Inelastic Scattering
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
Research Programs
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
PION-EXCHANGE MODEL
See OPE MODEL
PION-NUCLEON INTERACTIONS
Charge Exchange
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
Differential Cross Sections
Measurement of total cross sections of rho^0-meson interaction with intranuclear nucleons in π^-C interactions at 5 GeV/c, 11:32988 (R;SU;In Russian)
Elastic Scattering
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
Pion Minus Reactions
Measurement of total cross sections of rho^0-meson interaction with intranuclear nucleons in π^-C interactions at 5 GeV/c, 11:32988 (R;SU;In Russian)
Research Programs
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)
PIONS
See also PIONS MINUS
PIONS NEUTRAL
PIONS PLUS
Pair Production
Study of polarized proton diffraction dissociation in the reaction p/sub arrow-up/p$\rightarrow$p$\pi^+\pi^-$p at 11.75 GeV/c, 11:32991 (J;US)
Particle Production
Angular distribution of p, d and π from the π^- (5 GeV/c) + A(C, Pb) $\rightarrow$ a(p,d,π) + X reaction near 180 deg in l.s. , 11:32986 (R;SU;In Russian)
Pions from and about heavy ions, 11:33039 (BA;US)
Photoproduction
Spin-dipole excitations of ^{6}Li in charged pion photoproduction, 11:33115 (R;SU)
PIONS MINUS
Particle Production
Quark (diquark) fragmentation in soft π^- p interactions at P=40 GeV/c, 11:32987 (R;SU)
PIONS NEUTRAL
Particle Decay
On a behaviour of the form factor of the π^0 meson decay in a Dalitz pair in a small invariant mass region, 11:33010 (RA;SU;In Russian)
PIONS PLUS
Particle Production
Quark (diquark) fragmentation in soft π^- p interactions at P=40 GeV/c, 11:32987 (R;SU)
PIPELINES
Construction
Edaphic and crop production changes resulting from pipeline installation in semiarid agricultural ecosystems, 11:32867 (BA;US)
Cracking
New pipe steel test gets critical study, 11:31462 (J;US)
Excavation
Edaphic and crop production changes resulting from pipeline installation in semiarid agricultural ecosystems, 11:32867 (BA;US)
PIPES
Heat Transfer
Two-phase flow regimes and carry-over in a large-diameter model of a PWR hot leg. Final report, 11:31808 (R;US)

Hydraulics
Two-phase flow regimes and carry-over in a large-diameter model of a PWR hot leg. Final report, 11:31808 (R;US)
Research Programs
Overview of plastic pipe research at Battelle, 11:31463 (J;US)
Testing
Two-phase flow regimes and carry-over in a large-diameter model of a PWR hot leg. Final report, 11:31808 (R;US)
Turbulent Flow
Experimental investigation on transient turbulent friction behaviour of superposed pressure pulse in a circular pipe, 11:32471 (R;DE;In German)
Two-Phase Flow
Two-phase flow regimes and carry-over in a large-diameter model of a PWR hot leg. Final report, 11:31808 (R;US)

PISTONS
Design
Three-dimensional flow field in four-stroke model engines, 11:32123 (B;US)

Anions
Study on the hydrogen negative ion in low pressure discharges, 11:33302 (R;FR;In French)
Antennas
Role of ion Bernstein waves in ICRF experiments, 11:33365 (J;US)
Argon Ions
Study of a microwave discharge in argon/helium mixtures, 11:32944 (R;FR;In French)
Ballooning Instability
Helical axis stellarator equilibrium and resistive ballooning, 11:33315 (J;US)
Charge Exchange
Comparison of bounce-averaged quasilinear theory with charge exchange measurements during minority fundamental and majority second harmonic ICRF heating in PLT, 11:33361 (J;US)
ICRF heating experiments on the PLT tokamak, 11:33358 (J;US)
Charged-Particle Transport
Study of the effect of localized ECH on transport and stability in plasmas, 11:33380 (J;US)
Conservation Laws
Growth of phase space holes near linear instability, 11:33320 (J;US)
Current-Drive Heating
Modification of lower-hybrid current ramp-up by runaways, 11:33314 (J;US)
RF ramp-up efficiency versus power, 11:33375 (J;US)
Theory of the anomalous doppler instability during lower-hybrid current drive, 11:33373 (J;US)
Dispersion Relations
Mode conversion of lower hybrid waves at high ion cyclotron harmonics, 11:33376 (J;US)
Distribution Functions
Resonance localization in tokamaks excited with ICRF waves, 11:33362 (J;US)
Doppler Effect
Theory of the anomalous doppler instability during lower-hybrid current drive, 11:33373 (J;US)
Drift Instability
Renormalized turbulence theory of ion pressure gradient driven drift modes, 11:33317 (J;US)
ECR Heating
Electron cyclotron heating at down-shifted frequencies in PLT and TFTR, 11:33379 (J;US)
Heating of electrons in a high density Tokamak by a microwave near second harmonic frequency, 11:33378 (J;US)
Study of the effect of localized ECH on transport and stability in plasmas, 11:33380 (J;US)
Electric Conductivity
Influence of resistivity on energetic trapped particle-induced internal kink modes, 11:33319 (J;US)
RF ramp-up efficiency versus power, 11:33375 (J;US)
Electric Currents
Frequency scaling of the lower-hybrid current drive density limit on the Versator II tokamak, 11:33374 (J;US)
Electric Fields
Calculation of the electron distribution function and plasma X-ray spectra in an external electric field, 11:33307 (R;SU;In Russian)
Reply to comments of Catto and Myra, 11:33318 (J;US)
Runaway electrons and plasma turbulence in current ramping by lower hybrid waves in tokamak plasmas, 11:33372 (J;US)
Electron Beams
Contribution to the study of the interaction of intense relativistic electron beam with anodic plasma, 11:33301 (R;FR;In French)
Electron Drift
Ion viscosity stabilization of resistive internal kink modes, 11:33331 (J;US)
Electron Temperature
Energy confinement studies of lower hybrid current driven discharges in the Alcator C tokamak, 11:33367 (J;US)
Negative ion beam requirements for compact tori, 11:33454 (J;US)
Energy Absorption
Contribution to the study of the interaction of intense relativistic electron beam with anodic plasma, 11:33301 (R;FR;In French)
Resonance localization in tokamaks excited with ICRF waves, 11:33362 (J;US)
Energy Balance
Effects of Alfven Wave Heating on both confinement and impurities, 11:33357 (J;US)
Energy confinement studies of lower hybrid current driven discharges in the Alcator C tokamak, 11:33367 (J;US)
Energy Conservation
A generalized reduced fluid model with finite ion-gyroradius effects, 11:33329 (J;US)
Energy Conversion
Mode conversion of lower hybrid waves at high ion cyclotron harmonics, 11:33376 (J;US)
Energy Spectra
Comparison of top and side launch of lower hybrid waves in the PLT tokamak, 11:33369 (J;US)

Energy Transfer
The MICADO-A Multi-ion species confinement analysis code for ICRF and IBW heating experiments, 11:33364 (J;US)
Equations of State
Plasma processes in non-ideal plasmas, 11:33313 (R;US)
Equilibrium
Helical axis stellarator equilibrium and resistive ballooning, 11:33315 (J;US)
Fast Magnetoacoustic Waves
Parabolic approximation method for fast magnetosonic wave propagation in tokamaks, 11:33334 (J;US)
Fishbone Instability
Influence of resistivity on energetic trapped particle-induced internal kink modes, 11:33319 (J;US)
Heat Losses
Two-chamber model for divertors with plasma recycling, 11:33382 (J;US)
Helium Ions
Study of a microwave discharge in argon/helium mixtures, 11:32944 (R;FR;In French)
High-Frequency Heating
Heating of electrons in a high density Tokamak by a microwave near second harmonic frequency, 11:33378 (J;US)
New concepts for drift pumping a thermal barrier with RF, 11:33359 (J;US)
Holes
Growth of phase space holes near linear instability, 11:33320 (J;US)
Large amplitude ion holes, 11:33326 (J;US)
Hydrogen Ions
Study on the hydrogen negative ion in low pressure discharges, 11:33302 (R;FR;In French)
ICR Heating
Comparison of bounce-averaged quasilinear theory with charge exchange measurements during minority fundamental and majority second harmonic ICRF heating in PLT, 11:33361 (J;US)
ICRF heating experiments on the PLT tokamak, 11:33358 (J;US)
ICRF heating of passing ions in a thermal barrier tandem mirror, 11:33363 (J;US)
ICRF technology development on the Princeton RF Test Facility, 11:33442 (J;US)
Impurities

Tokamak Fusion Test Reactor neutron source strength measurements instrumentation and results, 11:33342 (J;US)
Schlieren Method
Study on the plasma dynamics in a high-current diode. (Shadow methods), 11:33308 (R;SU;In Russian)
Scintillation Counters
A high-pressure ^{3}He gas scintillation neutron spectrometer, 11:33340 (J;US)
X-Ray Spectroscopy
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)

PLASMA FOCUS DEVICES
Operation
Operational characteristics of a high voltage dense plasma focus. Final report, 7 May 1982-19 April 1985, 11:32967 (R;US)
Plasma Diagnostics
Operational characteristics of a high voltage dense plasma focus. Final report, 7 May 1982-19 April 1985, 11:32967 (R;US)

PLASMA HEATING
Alfven Waves
Effects of Alfven Wave Heating on both confinement and impurities, 11:33357 (J;US)
Efficiency
Modification of lower-hybrid current ramp-up by runaways, 11:33314 (J;US)
Ion Sources
Negative ion beam requirements for compact tori, 11:33454 (J;US)
Plasma Diagnostics
ICRF heating in STM, 11:33381 (J;US)
Waveguides
ICRF technology development on the Princeton RF Test Facility, 11:33442 (J;US)

PLASMA INSTABILITY
See also PLASMA MICROINSTABILITIES
Computerized Simulation
Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas, 11:33388 (BA;US)
Doppler Effect
Particle confinement and the anomalous Doppler instability during combined inductive and lower-hybrid current drive, 11:33325 (J;US)
Magnetohydrodynamics
Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas, 11:33388 (BA;US)
Plasma Waves
Theory of the anomalous doppler instability during lower-hybrid current drive, 11:33373 (J;US)

PLASMA MICROINSTABILITIES
See also DRIFT INSTABILITY
Computer Calculations
Finite element solution of the Fokker-Planck equation in electrostatic magnetic mirror fusion machines, 11:33387 (BA;US)
Perturbation Theory
Finite element solution of the Fokker-Planck equation in electrostatic magnetic mirror fusion machines, 11:33387 (BA;US)

PLASMA OSCILLATIONS
See PLASMA WAVES

PLASMA (QUARK)
See QUARK MATTER
PLASMA SCRAPE-OFF LAYER
Study on the tokamak scrape-off layer region, 11:33303 (R;SU;In Russian)
PLASMA SIMULATION
Computer Codes
Implicit moment electromagnetic plasma simulation in cylindrical coordinates, 11:33339 (J;US)
Spline Functions
High-order spline interpolations in the particle simulation, 11:33338 (J;US)
PLASMA WAVES
Electromagnetic Radiation
Electromagnetic solitary waves in magnetized plasmas, 11:33355 (J;GB)
Excitation
Experiments on the plasma beat wave accelerator at UCLA, 11:33391 (BA;US)
Laser plasma LINAC, 11:33392 (BA;US)
Two-dimensional beat wave acceleration simulation, 11:33390 (BA;US)
Raman Effect
Two-dimensional beat wave acceleration simulation, 11:33390 (BA;US)
Wave Propagation
Wave-mixing from unexpected atomic transitions in laser generated plasma, 11:33389 (BA;US)
PLASTIC SCINTILLATION COUNTERS
See PLASTIC SCINTILLATION DETECTORS
PLASTIC SCINTILLATION DETECTORS
Fabrication
High count rate-low energy proton detectors, 11:32594 (RA;US)
Specifications
High count rate-low energy proton detectors, 11:32594 (RA;US)
PLATES
Thicker than SHEETS or FOILS.
Hydrogen
Determination of the energetic and technical most favourable method for removing hydrogen from slabs and plates, 11:32156 (R;DE;In German)
PLATES (FUEL)
See FUEL PLATES
PLATING SOLUTIONS
See PROCESS SOLUTIONS
PLATINUM
Annealing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Chemical Reactions
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
Mixing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
X-Ray Spectra
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
PLATINUM CHLORIDES
Crystal Structure
X-ray absorption near edge structure (XANES) of $PtCl^{2-}_{4}$ in solid and solution environments, 11:32347 (J;US)
Structure Factors
X-ray absorption near edge structure (XANES) of $PtCl^{2-}_{4}$ in solid and solution environments, 11:32347 (J;US)
PLESIOTHERAPY
... See RADIOTHERAPY
PLT DEVICES
Energy Absorption
Electron cyclotron heating at down-shifted frequencies in PLT and TFTR, 11:33379 (J;US)
Plasma Confinement
ICRF heating experiments on the PLT tokamak, 11:33358 (J;US)
The MICADO-A Multi-ion species confinement analysis code for ICRF and IBW heating experiments, 11:33364 (J;US)
Plasma Heating
Comparison of top and side launch of lower hybrid waves in the PLT tokamak, 11:33369 (J;US)
Electron cyclotron heating at down-shifted frequencies in PLT and TFTR, 11:33379 (J;US)
ICRF heating experiments on the PLT tokamak, 11:33358 (J;US)
The MICADO-A Multi-ion species confinement analysis code for ICRF and IBW heating experiments, 11:33364 (J;US)
Waveguides
Comparison of top and side launch of lower hybrid waves in the PLT tokamak, 11:33369 (J;US)
PLUMES
Diffusion
Flow and dispersion near clusters of buildings, 11:32692 (R;US)
Report on the meeting held on January 8 and 9, 1986 at Cesta on the discharge of UF_6, 11:32734 (TG;US)
Mathematical Models
Predicting lift-off of major self-heating releases under the influence of a building, 11:32741 (R;FR)
PLUTONIC ROCKS
See also GABBROS
GRANITES
Evaluation
Geophysical methods for evaluation of plutonic rocks, 11:32884 (R;CA)
Screening
Geophysical methods for evaluation of plutonic rocks, 11:32884 (R;CA)
PLUTONIUM
Adsorption
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
Gamma Spectroscopy
Measurement of the plutonium content in low activity waste containers from reprocessing plant, 11:32328 (R;IT)
Leaching
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Purex Process
Testing and economical evaluation of U(IV) in Purex, 11:31481 (BA;US)
Radionuclide Migration
Transport code for radiocolloid migration: with an assessment of an actual low-level waste site, 11:31596 (BA;US)
Reduction
Testing and economical evaluation of U(IV) in Purex, 11:31481 (BA;US)
PLUTONIUM 239
Leaching
^{237}Np and ^{239}Pu solution behavior during hydrothermal testing of simulated nuclear waste glass with basalt and steel, 11:32302 (BA;US)
Rotational States
Semimicroscopic calculations of elastic, inelastic, and total neutron scattering by ^{239}Pu in the energy range 10 keV < or =E/sub n/< or =10 MeV, 11:33170 (J;US)
PLUTONIUM 239 TARGET
Neutron Reactions
Semimicroscopic calculations of elastic, inelastic, and total neutron scattering by ^{239}Pu in the energy range 10 keV < or =E/sub n/< or =10 MeV, 11:33170 (J;US)
PLUTONIUM DIOXIDE
Grain Size
Study of the solid solution formation in mixed oxides by X-ray diffraction, 11:31477 (RA;BR;In Portuguese)
X-Ray Diffraction
Study of the solid solution formation in mixed oxides by X-ray diffraction, 11:31477 (RA;BR;In Portuguese)

PLUTONIUM FLUORIDES
Chemical Preparation
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
PNA
See POLYCYCLIC AROMATIC HYDROCARBONS
POCKET CALCULATORS
See CALCULATORS
POISONS (CHEMICAL)
See HAZARDOUS MATERIALS
POISSON EQUATION
Fourier Transformation
Solution of the two-dimensional Poisson equation using fast Fourier transformation in charged particle beam simulation, 11:32550 (R;SU;In Russian)
POLARIMETERS
Performance
Polarimeter for the momentum filter, 11:32598 (RA;US)
POLARIZATION
For the process and condition in classical physics only; see also SPIN ORIENTATION.
R Codes
RESIS: a three-dimensional resistivity and induced polarization computer program based on a surface integral technique. Final report, 11:33264 (R;US)
POLICY
See ENERGY POLICY
ENVIRONMENTAL POLICY
POLLUTANTS
Not for radioactive contaminants for which use RADIOACTIVE WASTES or other related terminology.
Long-Range Transport
Air pollutant trajectories in precipitating storms, 11:32703 (BA;US)
POLLUTION ABATEMENT
Use this term for itmes that involve the prevention of pollutants at the source.
See also AIR POLLUTION ABATEMENT
Cost
Pollution control. Information on chemical industry safety equipment expenditures, 11:31983 (R;US)
POLOIDAL DIVERTOR EXPERIMENT
See PDX DEVICES
POLOIDAL DIVERTORS
See POLOIDAL FIELD DIVERTORS
POLOIDAL FIELD DIVERTORS
Currents
Effect of the poloidal current from the classical diffusion in the steady-state neo-classical transport, 11:33309 (R;BR;In Portuguese)
Mathematical Models
Two-chamber model for divertors with plasma recycling, 11:33382 (J;US)
Neoclassical Transport Theory
Effect of the poloidal current from the classical diffusion in the steady-state neo-classical transport, 11:33309 (R;BR;In Portuguese)
POLONIUM 208
Energy Levels
Nuclear data sheets for A = 208, 11:33160 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 208, 11:33160 (J;US)
POLYACETYLENES
Physical Radiation Effects
Neutron induced conductivity in trans-polyacetylene, 11:32249 (J;US)
POLYACRYLONITRILE
See NITRILES
POLYATOMIC MOLECULES
Electron Mobility
Method for precisely computing molecular integrals over STOs with n=l, 11:32960 (J;JP)
Molecular Models
Method for precisely computing molecular integrals over STOs with n=l, 11:32960 (J;JP)
Photolysis
Adiabatic approach in the theory of polyatomic photodissociation: Application to C_2N_2, 11:32383 (BA;US)
Predissociation
Adiabatic approach in the theory of polyatomic photodissociation: Application to C_2N_2, 11:32383 (BA;US)
POLYCYCLIC AROMATIC AMINES
Mutagenesis
Isolation of a highly mutagenic aminophenanthrene from a coal gasification process tar, 11:32857 (J;US)
POLYCYCLIC AROMATIC HYDROCARBONS
Air Pollution Monitoring
Air pollution: applications of simple luminescence techniques, 11:32737 (BA;US)
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
Chemical Reaction Kinetics
Chemical reactivity of polycyclic organic compounds adsorbed on coal fly ash and related solid surfaces. Progress report, May 1985-April 1986, 11:32711 (R;US)
Ecological Concentration
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
Measuring Methods
Air pollution: applications of simple luminescence techniques, 11:32737 (BA;US)
Synthesis
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983, 11:31332 (R;US)
POLYCYCLIC SULFUR HETEROCYCLES
Gas Chromatography
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
Mass Spectroscopy
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
Synthesis
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
POLYETHYLENES
Physical Radiation Effects
Interaction of polyethylene and tritium gas as monitored by raman spectroscopy, 11:33438 (J;US)
Raman Spectroscopy
Interaction of polyethylene and tritium gas as monitored by raman spectroscopy, 11:33438 (J;US)
POLYMER FLOODING
See MICROEMULSION FLOODING
WATERFLOODING
POLYMERS
See also ETHYLENE PROPYLENE DIENE POLYMERS
Molecular Structure
Statistical mechanics of polymer systems. Progress report, September 1, 1985-August 31, 1986, 11:32246 (R;US)
Substrates
Investigation of the plasma properties of surface discharges. Final report, 1 October 1984-30 September 1985, 11:32968 (R;US)
POLYNUCLEAR AROMATIC HYDROCARBONS
See POLYCYCLIC AROMATIC HYDROCARBONS
POLYSTYRENE
Excited States
Intramolecular excimer formation and energy migration in head-to-head polystyrene, 11:32375 (J;GB)

Fluorescence
Intramolecular excimer formation and energy migration in head-to-head polystyrene, 11:32375 (J;GB)
POLYSULFIDES
See SULFIDES
POLYTHENE
See POLYETHYLENES
POLYURETHANES
Thermal Conduction
Effective conductivity of aging polyurethane foam, 11:32257 (R;US)
Weathering
Effective conductivity of aging polyurethane foam, 11:32257 (R;US)
POMERANCHUK THEOREM
Scattering Amplitudes
Finite-energy analogs of Pomeranchuk theorems, 11:33005 (RA;SU;In Russian)
Total Cross Sections
Finite-energy analogs of Pomeranchuk theorems, 11:33005 (RA;SU;In Russian)
POROSIMETERS
Performance
Relationship between the shock sensitivity and the solid pore sizes of TATB powders pressed to various densities, 11:32673 (RA;US)
POROUS MATERIALS
Incompressible Flow
Constitutive relations for flow of a non-newtonian fluid through saturated porous media, 11:32469 (R;BR;In Portuguese)
Modelling of the filling up of a porous plate, 11:32467 (R;BR;In Portuguese)
Liquid Flow
On the equations for the flow of concentrated salt solution through a porous medium, 11:31582 (R;GB)
Mass Transfer
Mass transfer in a geologic environment, 11:32301 (BA;US)
PORPHYRINS
See also CHLOROPHYLL
Electron Transfer
Distance dependent rates of photoinduced charge separation and dark charge recombination in fixed distance porphyrin-quinone molecules, 11:32367 (R;US)
Pyrolysis
Pyrolyzed macrocycle/carbon blends for advanced electrocatalysts, 11:32256 (R;US)
Radiolysis
Lipid peroxidation model for halogenated hydrocarbon toxicity. Kinetics of peroxyl radical processes involving fatty acids and Fe(III) porhyrins, 11:32816 (J;NL)
PORTLAND CEMENT
Hydrothermal Alteration
Geochemical performance evaluation and characterization of a potential cementitious repository sealing material for application in the Topopah Spring tuff NNWSI investigations, 11:32324 (BA;US)
Performance
Geochemical performance evaluation and characterization of a potential cementitious repository sealing material for application in the Topopah Spring tuff NNWSI investigations, 11:32324 (BA;US)
Physical Radiation Effects
Study of irradiation damage by fast neutrons in samples of Portland cement, 11:32253 (RA;BR;In Portuguese)
Stability
Leachability of decontamination reagents from cement waste forms, 11:32323 (BA;US)
PORTSMOUTH CENTRIFUGE ENRICHMENT PLANT
Safety
Cost-reducing seismic qualification program for the Gas Centrifuge Enrichment Plant (GCEP), 11:32502 (RA;US)
Seismic Effects
Cost-reducing seismic qualification program for the Gas Centrifuge Enrichment Plant (GCEP), 11:32502 (RA;US)
PORTSMOUTH GASEOUS DIFFUSION PLANT
Safety
Seismic vulnerability study of the nation's uranium enrichment plants, 11:32488 (RA;US)
PORTSMOUTH PLANT
See PORTSMOUTH CENTRIFUGE ENRICHMENT PLANT
PORTSMOUTH GASEOUS DIFFUSION PLANT

POTASSIUM
Chemical Reactions
Reactions governing coal solubilization. Tenth quarterly report, October 15, 1985-January 15, 1986, 11:31334 (R;US)
Flame Photometry
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Flame photometric determination of Na, K and Li in uranium compounds, 11:32333 (R;BR;In Portuguese)
POTASSIUM 38
Beta-Plus Decay
βi decays of ^{34}Ar, ^{34}Cl and ^{38}K, 11:33120 (RA;US)
POTASSIUM 39 TARGET
Proton Reactions
Excited-state giant resonances observed in the $^{39}K(p,\gamma)^{40}Ca$ and $^{40}Ca(p,\gamma)^{41}Sc$ reactions, 11:33128 (RA;US)
POTASSIUM CHLORIDES
Crystal Structure
X-ray absorption near edge structure (XANES) of $PtCl^{2-}_4$ in solid and solution environments, 11:32347 (J;US)
Electrolysis
Development and operation of a prototype plant comprising a bipolar membrane cell electrolyzer for the electrolysis of KCl. Final report, 11:32091 (R;DE;In German)
Structure Factors
X-ray absorption near edge structure (XANES) of $PtCl^{2-}_4$ in solid and solution environments, 11:32347 (J;US)
POTASSIUM HYDRIDES
Crystal Structure
High-resolution transmission electron microscopy on KH/sub x/—GIC's, 11:32278 (J;US)
Transmission Electron Microscopy
High-resolution transmission electron microscopy on KH/sub x/—GIC's, 11:32278 (J;US)
POTASSIUM HYDROXIDES
Chemical Reaction Kinetics
Comparison of ethanolamine and potassium hydroxide as quantitative trapping agents for radiolabeled CO_2 in metabolism studies, 11:32815 (J;US)
POTENTIAL SCATTERING
Group Theory
Group theory approach to scattering. II. The Euclidean connection, 11:33092 (J;US)
POTENTIOMETRY
Electrodes
Potentiometric titrations using pencil and graphite sensors, 11:32342 (J;US)
POWDER METALLURGY
Strain analysis for extrusion of powder metals, 11:32174 (R;US)
POWER DISTRIBUTION SYSTEMS
Computer-Aided Design
Interactive computer programs for public electricity network design, 11:31789 (R;FI;In Finnish)
Construction
Comparison of electricity distribution network schemes for housing estates, 11:31790 (R;FI;In Finnish)

Electric Cables
Microcomputer control and monitoring of heat transfer experiments with underground power cables, 11:31787 (RA;US)
Microcomputer program for calculating temperatures of underground power cables, 11:31788 (RA;US)
Equipment Protection Devices
Protection problems related to distribution systems with interconnected dispersed-storage-generation devices, 11:31791 (BA;GB)
Land Use
Comparison of electricity distribution network schemes for housing estates, 11:31790 (R;FI;In Finnish)
Planning

Theory of the ^{14}N parity mixing measurement, 11:33112 (RA;US)
Inclusive Interactions
P-C analyzing power between 100 and 750 MeV, 11:33117 (J;NL)
Nuclear Reaction Yield
Inclusive production of protons with energies of 80-240 MeV in the pHe^4 - and $\pi^- He^4$ interactions, 11:33102 (R;SU;In Russian)
Neutron-to-proton ratios in pA and π^{+-} A interactions, 11:33189 (R;SU)
PROTON-ANTIPROTON INTERACTIONS
Computerized Simulation
ISAJET 5.20: a Monte Carlo event generator for pp and anti pp interactions, 11:32997 (R;US)
Prospects for SSC physics, 11:32996 (R;US)
Cross Sections
On a behaviour of inclusive hadron processes at large transferred momenta and energies CERN ISR and SPS COLLIDER, 11:33014 (RA;SU;In Russian)
Elastic Scattering
New results from the UA5/2-experiment, 11:32980 (R;DE)
Inclusive Interactions
Testing the WWγ coupling of the standard model at p anti p-colliders, 11:33000 (R;DE)
Meetings
anti pp options for the supercollider: proceedings, 11:32589 (R;US)
Multiple Production
Is a light gluino still compatible with the CERN collider data, 11:33001 (R;DE)
New results from the UA5/2-experiment, 11:32980 (R;DE)
Scale Invariance
KNO-scaling violation at superhigh energies, 11:33012 (RA;SU;In Russian)
String Models
KNO-scaling violation at superhigh energies, 11:33012 (RA;SU;In Russian)
Total Cross Sections
New results from the UA5/2-experiment, 11:32980 (R;DE)
PROTON-NUCLEON INTERACTIONS
See also PROTON-PROTON INTERACTIONS
Inclusive Interactions
Observation of a narrow enhancement in phiKK and phi$\pi\pi$ final states produced in 400-GeV p-N interactions, 11:32992 (J;US)
PROTON-PROTON INTERACTIONS
Computerized Simulation
ISAJET 5.20: a Monte Carlo event generator for pp and anti pp interactions, 11:32997 (R;US)
Prospects for SSC physics, 11:32996 (R;US)
Cross Sections
On a behaviour of inclusive hadron processes at large transferred momenta and energies CERN ISR and SPS COLLIDER, 11:33014 (RA;SU;In Russian)
Diffraction Models
Study of polarized proton diffraction dissociation in the reaction p/sub arrow-up/p→p$\pi^+\pi^-$p at 11.75 GeV/c, 11:32991 (J;US)
Particle Production
Meson resonance production in the parton model with account for transverse quark motion, 11:33016 (RA;SU;In Russian)
PROTONS
Particle Production
Angular distribution of p, d and π from the π^- (5 GeV/c) + A(C, Pb) → a(p,d,π) + X reaction near 180 deg in l.s. , 11:32986 (R;SU;In Russian)
PUBLIC BUILDINGS
Space Heating
Utilization of soil heat for air conditioning of buildings, as applied in the new theatre of the city of Heilbronn. Final report, 11:32039 (R;DE;In German)
PUBLIC UTILITIES
See also ELECTRIC UTILITIES

GAS UTILITIES
Diversification
Utility's decision to establish an energy services subsidiary, 11:32115 (J;US)
Marketing Research
Advanced commercial survey methods (COMSURV). Volume 1. Demonstration of tailored versus general questionnaires. Final report, 11:31998 (R;US)
Water Supply
Protection of public water supplies from ground-water contamination. Seminar publication, 11:32785 (R;US)

PULMONARY LAVAGE
See LUNGS

PULPS
See SLURRIES

PULVERIZED FUEL ASH
See FLY ASH

PUROX PYROLYSIS PROCESS
PUROX System gas conditioning pilot plant. Final report, September 1976-September 1977, 11:31647 (R;US)

PWR TYPE REACTORS

ROBINSON-2 REACTOR
THREE MILE ISLAND-1 REACTOR
THREE MILE ISLAND-2 REACTOR
WWER TYPE REACTORS
Evaluation of XSDRN code for PWR cross-section generation, 11:31828 (R;BR;In Portuguese)
Blackouts
Draft regulatory guide and value/impact statement: station blackout, 11:31956 (R;US)
Building Materials
Choice of cement for the manufacture of concrete to be activated: the potential for reducing the radiological consequences of reactor decommissioning, 11:31890 (R;GB)
Comparative Evaluations
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Containment Systems
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Venting of noncondensible gas from the upper head of a B and W reactor vessel using hot leg U-bend vent valves, 11:31954 (R;US)
Control Rod Worths
Study of reliability of HAMMER-TECHNION code to calculate control rod worth in PWR's, 11:31829 (R;BR;In Portuguese)
Counterflow Systems
TRAC-PF1/MOD 1 independent assessment. Condensation in stratified cocurrent flow, 11:31947 (R;US)
Engineered Safety Systems
Study on safety criteria and systems for next PWRs, 11:31897 (R;IT)
Failures
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Fuel Assemblies
Brazilian-German investigations of thorium utilization in KWU type PWRs. Results of nuclear core design, 11:31831 (R;BR)
Fuel-Cladding Interactions
Fuel cladding interaction with water coolant in power reactors. A survey report of a coordinated research programme on the investigation of fuel element cladding interaction with water coolant in power reactors, 11:31799 (R;XA)
Role of water chemistry in reliable operation of nuclear power plants, 11:31800 (RA;XA)
Leak Detectors
NDE of stainless steel and on-line leak monitoring of LWRs. Annual report, October 1984-September 1985. Volume 2, 11:31948 (R;US)
Loss of Coolant
COSIMA-experiments, a data base for validation of two-phase flow computer codes, 11:31908 (R;DE;In German)
Critical flow of subcooled liquid and jet forces, 11:31898 (R;IT)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Loss of Flow
THETIS 80% blocked cluster experiment. Part 1. Description of THETIS rig, the 80% blocked cluster assembly and experimental procedures, 11:31887 (R;GB)
THETIS 80% blocked cluster experiment. Part 5. Level swell experiments, 11:31888 (R;GB)
THETIS 80% blocked cluster experiment. Part 6. Overview, 11:31889 (R;GB)
Meltdown
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Measurements of the condensation of steam on different aerosols under LWR core melt down conditions, 11:31923 (RA;US)
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Nuclear Fuels
Fuel Performance Improvement Program. Final report, 11:31794 (R;US)
Thermohydraulic tests in nuclear fuel model, 11:31830 (R;BR;In Portuguese)
Pipes
Two-phase flow regimes and carry-over in a large-diameter model of a PWR hot leg. Final report, 11:31808 (R;US)
Radiation Protection
Choice of cement for the manufacture of concrete to be activated: the potential for reducing the radiological consequences of reactor decommissioning, 11:31890 (R;GB)
Radioactive Effluents
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
Reactor Accidents
Assessment of post-critical-heat flux models with Lehigh nonequilibrium data, 11:31950 (R;US)
Nuclear power plant severe accident research plan. Revision 1, 11:31911 (R;US)
Relative importance of individual elements to reactor accident consequences assuming equal release fractions, 11:31952 (R;US)
TRAC-PF1/MOD1 independent assessment. LOBI intermediate break test B-R1M, 11:31946 (R;US)
Reactor Components
Development and validation of a real-time SAFT-UT system for the inspection of light water reactor components. Semiannual report, April 1984-September 1984. Volume 1, 11:31804 (R;US)
Trends of failures of major components during V-1 nuclear power plant operation in the years 1980-1983 and comparison with foreign nuclear power plants, 11:31827 (RA;CS;In Slovak)
Reactor Cooling Systems
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
Sensitivity calculation of the coolant temperature regarding the thermohydraulic parameters, 11:31835 (R;BR;In Portuguese)
Reactor Cores
Brazilian-German investigations of thorium utilization in KWU type PWRs. Results of nuclear core design, 11:31831 (R;BR)

Effects of Zircaloy oxidation and steam dissociation on PWR core heat-up under conditions simulating uncovered fuel rods, 11:31807 (R;US)
Post dry-out heat transfer in uncovered core accidents, 11:31899 (R;IT)
Relative importance of individual elements to reactor accident consequences assuming equal release fractions, 11:31952 (R;US)
Reactor Materials
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)
Reactor Operation
Licensed operating reactors. Status summary report data as of January 31, 1986. Volume 10, No. 2, 11:31803 (R;US)
Reactor Safety
Coordination of safety research for the B and W integral system test program, 11:31900 (R;US)
Study on safety criteria and systems for next PWRs, 11:31897 (R;IT)
TRAC-PF1/MOD1 independent assessment. LOBI intermediate break test B-R1M, 11:31946 (R;US)
Spent Fuels
Fuel and pool component performance in storage pools, 11:31809 (R;US)
Oxidation of spent fuel at between 250 and 360°C, 11:31796 (R;US)
Steam Generators
Coordination of safety research for the B and W integral system test program, 11:31900 (R;US)
Transients
Analysis of some anticipated transients without scram for a pressurized water cooled reactor (PWR) using coupling of the containment code CORAN to the system model code ALMOD, 11:31810 (R;BR;In Portuguese)
Water Chemistry
Deposition and migration of corrosion products and impurities, 11:31801 (RA;XA)
Fuel cladding interaction with water coolant in power reactors. A survey report of a coordinated research programme on the investigation of fuel element cladding interaction with water coolant in power reactors, 11:31799 (R;XA)
Role of water chemistry in reliable operation of nuclear power plants, 11:31800 (RA;XA)
Water chemistry of nuclear power reactors. Evaluation of specifications for water quality, 11:31798 (RA;XA)

PYRANOMETERS
Calibration
Solar radiometry instrumentation, calibration techniques, and standards, 11:31669 (RA;US)
Standards
Solar radiometry instrumentation, calibration techniques, and standards, 11:31669 (RA;US)

PYREX
Physical Radiation Effects
Ion implantation damage processes in nuclear waste glass and other silicate glasses, 11:32309 (BA;US)

PYRHELIOMETERS
Calibration
Solar radiometry instrumentation, calibration techniques, and standards, 11:31669 (RA;US)
Standards
Solar radiometry instrumentation, calibration techniques, and standards, 11:31669 (RA;US)

2-PYRIDINECARBOXYLIC ACID
See PICOLINIC ACID

PYRITE
Catalytic Effects
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Porosity
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)

PYRITES
See PYRITE

PYROCHLORE
Chemical Preparation
Investigation of metamict and annealed natural pyrochlores by x-ray absorption spectroscopy (Synthetic pyrochlores with general formula $(RE)_2Ti_2O_7$, Re = Er, T_2, Gd_2, Dy, La), 11:32313 (BA;US)
Chemical Radiation Effects
Natural pyrochlores: analogues for actinide host phases in radioactive waste forms, 11:32312 (BA;US)
Physical Radiation Effects
Investigation of metamict and annealed natural pyrochlores by x-ray absorption spectroscopy (Synthetic pyrochlores with general formula $(RE)_2Ti_2O_7$, Re = Er, T_2, Gd_2, Dy, La), 11:32313 (BA;US)

PYRRHITE
See PYROCHLORE

PYRROLES
See also INDOLES
Gas Chromatography
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)
Mass Spectroscopy
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983 (Hydroxyphenylthiophenes, hydroxyindoles, hydroxycarbazoles, hydroxyphenylpyrroles, hydroxyphenylpyridines, aminothiophenes), 11:31332 (R;US)

PYRUVIC ACID
Chemical Preparation
Preparation of C-II labeled pyruvic acid for use in assessment of hypoxia in tumors. Project 4, 11:32827 (RA;US)
Labelling
Preparation of C-II labeled pyruvic acid for use in assessment of hypoxia in tumors. Project 4, 11:32827 (RA;US)
Tissue Distribution
Preparation of C-II labeled pyruvic acid for use in assessment of hypoxia in tumors. Project 4, 11:32827 (RA;US)

Q

QUANTUM CHROMODYNAMICS
Algorithms
Another higher order Langevin algorithm for QCD, 11:33003 (R;DE)
Anomalous Dimension
Gluonic Regge singularities and anomalous dimensions in QCD, 11:33064 (R;PL)
Born-Oppenheimer Approximation
Supersymmetry and zero-momentum modes, 11:33082 (J;US)
Electron-Positron Interactions
Calculation of the O(αsub(s)²) parity-violating structure functions in e^+e^-->q anti qg, 11:33040 (R;DE)
Gauge Invariance
Gauge-invariant variables and infrared confinement in QCD, 11:33068 (R;SU)
Lattice Field Theory
Updating fermions with the Lanczos method, 11:33048 (R;DE)
Quantization
Gauge-invariant variables and infrared confinement in QCD, 11:33068 (R;SU)
Quark Matter
Critical behaviour in baryonic matter, 11:33032 (J;DE)
Renormalization
Quantum field theoretic properties of nonabelian phase factors, 11:33055 (RA;SU)
Supersymmetry
Supersymmetry and zero-momentum modes, 11:33082 (J;US)

QUANTUM ELECTRODYNAMICS
Born-Oppenheimer Approximation
Supersymmetry and zero-momentum modes, 11:33082 (J;US)
Electromagnetic Interactions
Chaos in radiative interactions, 11:33084 (BA;US)
Hamiltonians
AXp or rXE? Minimal coupling and multipolar Hamiltonians in the quantum theory of radiation, 11:33085 (BA;US)
Magnetic Fields
Weak and electromagnetic interaction effects in a strong magnetic field, 11:33006 (RA;SU;In Russian)
Stochastic Processes
Probabilistic solutions of generalized birth and death equations and application to non-relativistic electrodynamics, 11:33052 (R;DE)
Stochastic mechanics of a Dirac particle in two space-time dimensions, 11:33004 (R;DE)
Supersymmetry
Supersymmetry and zero-momentum modes, 11:33082 (J;US)
Turbulence
Chaos in radiative interactions, 11:33084 (BA;US)
QUANTUM FIELD THEORY
See also LATTICE FIELD THEORY
QUANTUM CHROMODYNAMICS
QUANTUM ELECTRODYNAMICS
QUANTUM FLAVORDYNAMICS
QUANTUM GRAVITY
Computerized Simulation
Quenched massive Schwinger model in the infrared approximation, 11:33081 (J;US)
Meetings
Proceedings of the 6. International seminar on high energy physics and quantum field theory. Vol. 2, 11:32976 (R;SU;In Russian)
Proceedings of the 7. Seminar on problems of high energy physics and quantum field theory. Vol. 1, 11:32977 (R;SU;In Russian)
Quarks
Realization of irreducible representations of the IU(1,3) group in generalized quark fields, 11:33062 (RA;SU;In Russian)
Rest Mass
Volume dependence of the energy spectrum in massive quantum field theories. Pt. 1. Stable particle states, 11:33049 (R;DE)
Spin
Polarization symmetries of field theories, 11:33058 (RA;SU;In Russian)
SU Groups
Polarization symmetries of field theories, 11:33058 (RA;SU;In Russian)
Supersymmetry
Dirac quantization in superspace, 11:33077 (J;US)
Two-Dimensional Calculations
Fermion—grand-unified-monopole systems as exactly solvable two-dimensional quantum-field-theory problems, 11:33078 (J;US)
Vacuum States
Decay of false vacuum in (1+1) dimensions, 11:33065 (R;SU)
QUANTUM FLAVORDYNAMICS
Leptonic Decay
Status of rare decay experiments, 11:33037 (BA;US)
Particle Production
New results on flavor production at PEP, 11:33036 (BA;US)
QUANTUM FLUIDS
Ground States
Variational and diagrammatic evaluations of the ground-state energy of quantum liquids, 11:32974 (J;US)
QUANTUM GRAVITY
Gauge Invariance
Gauge invariance and unitarity in higher-derivative quantum gravity, 11:33272 (J;US)
Unitarity
Gauge invariance and unitarity in higher-derivative quantum gravity, 11:33272 (J;US)
QUANTUM MECHANICS
Historical Aspects
Tribute to Niels Bohr, 11:33252 (R;XC)
Supersymmetry
Conditions for nondegeneracy in supersymmetric quantum mechanics, 11:33271 (J;US)
Dirac quantization in superspace, 11:33077 (J;US)
Topology
Three-cocycle in quantum mechanics. II, 11:33270 (J;US)
Variational Methods
Time-dependent variational principle for quantum dynamics in the Schrodinger-picture, 11:33259 (R;US)
QUARK CONFINEMENT

QUARK-GLUON INTERACTIONS
Energy Density
Anomalons, honey and glue in nuclear collisions, 11:33038 (BA;US)
Plasma
Anomalons, honey and glue in nuclear collisions, 11:33038 (BA;US)
QUARK-GLUON PLASMA
See QUARK MATTER
QUARKONIUM
A hypothetical bound state of quark and antiquark.
Fermi-Segre Formula
Improved Fermi-Segre formula for absolute value squared of (R/sub n/,1/r/sup 1/)(0) for singular and nonsingular potentials, 11:33277 (J;US)
Potentials
Concavity of the quarkonium potential, 11:33030 (J;US)
QUARKS
Kobayashi-Maskawa Matrix
Prediction of the four-generation Kobayashi-Maskawa matrix, 11:33028 (J;US)
Mass
Prediction of the four-generation Kobayashi-Maskawa matrix, 11:33028 (J;US)
Particle Production
Search for "subthreshold" production of antiprotons and creation of fractional charges and new particles in relativistic nuclear collisions, 11:33123 (J;US)
QUARTZ
Biological Accumulation
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
Biological Effects
Particles and macrophages in murine Peyer's patches, 11:32863 (J;CH)
QUARTZITES
Permeability
Permeability changes in crystalline rocks due to temperature: effects of mineral assemblage, 11:32892 (BA;US)
QUASIPOTENTIAL EQUATION
Wave Functions
Dynamic equations for gauge-invariant wave functions, 11:33061 (RA;SU;In Russian)
QUINOLINES
Gas Chromatography
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983, 11:31332 (R;US)
Hydrogenation
Hydrotreatment catalyst activity enhancement. Quarterly report No. 11, February 1-April 30, 1986, 11:31310 (R;US)
Mass Spectroscopy
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental

funding request and annual progress report, March 1-November 31, 1983, 11:31332 (R;US)

R

R CODES
RESIS: a three-dimensional resistivity and induced polarization computer program based on a surface integral technique. Final report, 11:33264 (R;US)
RACIAL GROUPS
See MINORITY GROUPS
RADIANT FLUX DENSITY
Measuring Methods
Comparison of radiation fluxes in a fully-leafed and leafless deciduous forest, 11:32706 (BA;US)
RADIANT HEAT TRANSFER
Compton Effect
A simple method for computing the relativistic Compton scattering kernel for radiative transfer, 11:33026 (J;US)
Variational Methods
General variational formulation for problems of heat transfer by diffuse radiation, 11:32468 (R;BR;In Portuguese)
RADIANT INTENSITY

Need for quality dose measurements, 11:32609 (RA;US)
Legislation
Legislation and litigation related to low-level radiation injury claims, 11:33233 (RA;US)
Manpower
Health physics/radiation protection enrollments and degrees, 1985, 11:31997 (R;US)
Regulatory Guides
Guide for controlling consumer products containing radioactive substances, 11:33230 (R;XN)
Standards
Litigation, standards and impact, 11:33232 (RA;US)

RADIATION SAFETY
See RADIATION PROTECTION

RADIATION SOURCES
For cosmic sources of radiation see also COSMIC GAMMA SOURCES, COSMIC RADIO SOURCES, and COSMIC X-RAY SOURCES.
See also LIGHT SOURCES
SYNCHROTRON RADIATION SOURCES
UNSEALED SOURCES
X-RAY SOURCES
Design
Coherent XUV facility, 11:32581 (RA;US)

RADICALS
Not to be used for compound descriptions.
See also ALKYL RADICALS
ARYL RADICALS
HYDROPEROXY RADICALS
HYDROXYL RADICALS
Chemical Reactions
[Studies of chemical reactions in solid matrices]. Final report, December 1,, 1979-November 30, 1984, 11:32378 (R;US)

RADIOACTIVE AEROSOLS
Aerodynamics
Morphology and aerodynamics of sodium oxide aerosol at low relative humidities, 11:31921 (RA;US)
Attenuation
Development of interpolation formulae for rapid evaluation of the attenuation due to aerosol processes of radioactive release following hypothetical fast reactor accidents, 11:31938 (RA;US)
Behavior
Aerosol behavior modeling, 11:31937 (RA;US)
Aerosol behavior model validation procedure, 11:31940 (RA;US)
Influence of the source term parameters on aerosol behavior in core melt down accidents in LWRs, 11:31939 (RA;US)
Interpretation of the behavior of aerosols generated by a sodium pool fire, 11:31941 (RA;US)
Relative importance of various coagulation and removal mechanisms for aerosols in finite containers, 11:31936 (RA;US)
Sensitivity analysis of aerosol behavior model, 11:31943 (RA;US)
Study of multi-stages cascade impactors, 11:31931 (RA;US)
Classification
Inertial classification of aerosols for size measurement, 11:31927 (RA;US)
Deposition
Boundary layer for diffusive aerosol deposition onto walls, 11:31922 (RA;US)
Measuring Methods
Application of optical methods in nuclear aerosol measurements, 11:31926 (RA;US)
Measuring techniques for nuclear aerosol experiments, 11:31929 (RA;US)
Meetings
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Morphology
Morphology and aerodynamics of sodium oxide aerosol at low relative humidities, 11:31921 (RA;US)
Physical Properties
Physical rate processes in confined aerosols, 11:31917 (RA;US)
Removal
Relative importance of various coagulation and removal mechanisms for aerosols in finite containers, 11:31936 (RA;US)
Sampling
Sampling techniques and electrical measurements of nuclear aerosols - counting and sizing by condensation nuclei counter and diffusion batteries, 11:31925 (RA;US)
Shape
Analytical studies on uranium oxide, sodium oxide and their mixed aerosols by using ABC-3B, 11:31942 (RA;US)
Winfrith studies related to nuclear aerosols and the fast reactor safety program, 11:31932 (RA;US)
Size
Analytical studies on uranium oxide, sodium oxide and their mixed aerosols by using ABC-3B, 11:31942 (RA;US)
Aspects of the moments method for aerosol calculations, 11:31935 (RA;US)
Comparative instrumental study on the size characteristics of yttrium oxide aggregate aerosols, 11:31930 (RA;US)
Inertial classification of aerosols for size measurement, 11:31927 (RA;US)
Interpretation of the behavior of aerosols generated by a sodium pool fire, 11:31941 (RA;US)
Measurement of high concentration DOP aerosols by a laser dust counter, 11:31933 (RA;US)
Study of multi-stages cascade impactors, 11:31931 (RA;US)
Summary - panel discussion on nuclear aerosol measurements, 11:31934 (RA;US)
Winfrith studies related to nuclear aerosols and the fast reactor safety program, 11:31932 (RA;US)
Sodium Oxides
Proceedings of the CSNI specialists meeting on nuclear aerosols in reactor safety, 11:31913 (R;US)
Transport
Aerosol release from a hot sodium pool and behavior in sodium vapor atmosphere, 11:31916 (RA;US)
Sampling techniques and electrical measurements of nuclear aerosols - counting and sizing by condensation nuclei counter and diffusion batteries, 11:31925 (RA;US)

Winfrith studies related to nuclear aerosols and the fast reactor safety program, 11:31932 (RA;US)

RADIOACTIVE BIOLOGICAL WASTES
See RADIOACTIVE WASTES

RADIOACTIVE EFFLUENTS
Radiation Monitoring
Measurements of airborne radioactive emissions from nuclear power plants and their quality control in the Federal Republic of Germany, 11:31874 (R;US)
Radionuclide Migration
Anaerobic microbial transformations in subsurface environments: highlights, 11:32856 (R;US)
Spatial Distribution
Dispersion of dissolved material in the Columbia River (Activity density pattern at 1000 to 3000 ft downstream from discharge), 11:31583 (R;US)

RADIOACTIVE GASEOUS WASTES
See GASEOUS WASTES
RADIOACTIVE WASTES

RADIOACTIVE MATERIALS
See also RADIOACTIVE WASTES
Air Transport
Royal Decree 1749/1984 of 1 August approving the national regulations on the safe transport of dangerous goods by air together with technical instructions for the safe transport of dangerous goods by air, 11:31485 (R;ES;In Spanish)
Regulatory Guides
Guide for controlling consumer products containing radioactive substances, 11:33230 (R;XN)
Road Transport
17 May 1985 - Ministerial Order made in implementation of Sections 3, 6 and 8 of the Royal Order of 5 November 1982 on training certificates for drivers of vehicles for road transport of hazardous materials in containers, 11:31486 (R;BE;In French and Dutch)

RADIOACTIVE PARTICULATES
See RADIOACTIVE AEROSOLS

RADIOACTIVE TRACERS
See RADIOPHARMACEUTICALS

RADIOACTIVE WASTE DISPOSAL
Canadian Nuclear Fuel Waste Management Program. Annual report, 1984, 11:31491 (R;CA)
Comparative Evaluations
Evaluation of commercial repository capacity for the disposal of defense high-level waste, 11:31497 (R;US)
Containers
Stress corrosion cracking tests on electron beam welded carbon steel specimens in carbonate-bicarbonate solution, 11:32155 (R;GB)
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Financing
Analysis of the total system life cycle cost for the Civilian Radioactive Waste Management Program. Volume 1. The analysis and its results, 11:31505 (R;US)
Analysis of the total system life cycle cost for the Civilian Radioactive Waste Management Program. Volume 2. Supporting information, 11:31506 (R;US)
Geophysical Surveys
Borehole to borehole geophysical methods applied to investigations of High-Level Waste repository sites, 11:31581 (BA;US)
Life-Cycle Cost
Analysis of the total system life cycle cost for the Civilian Radioactive Waste Management Program. Volume 1. The analysis and its results, 11:31505 (R;US)
Analysis of the total system life cycle cost for the Civilian Radioactive Waste Management Program. Volume 2. Supporting information, 11:31506 (R;US)
Marine Disposal
Study of the penetration of projectiles into marine sediments, 11:31509 (R;FR;In French)
Materials
Reference and testing materials available from the Materials Characterization Center, 11:31558 (BA;US)
Materials Testing
Functions of the materials review board, 11:31557 (BA;US)
Mathematical Models
Two-dimensional continuum model for jointed media with orthogonal sets of joints, 11:32405 (R;US)
Natural Convection
Natural convection experiments about a finite-length cylindrical heat source in a liquid-saturated porous medium, 11:31548 (B;US)
Risk Assessment
A comparison of risks due to HLW and SURF repositories in bedded salt, 11:31578 (BA;US)
Far field migration of radionuclides in two dimensional ground water flows though geologic media, 11:31585 (R;BR)
PRESTO-II: a low-level waste environmental transport and risk assessment code, 11:32761 (R;US)
Site Surveys
Borehole to borehole geophysical methods applied to investigations of High-Level Waste repository sites, 11:31581 (BA;US)
Underground Disposal
Natural convection experiments about a finite-length cylindrical heat source in a liquid-saturated porous medium, 11:31548 (B;US)

RADIOACTIVE WASTE FACILITIES
See also WIPP
Assessment of the use of a multi-purpose and centralized facility for the disassembly and packaging of spent nuclear fuel to support the various segments of the DOE Waste Management System, 11:31483 (R;US)
Assessment of the use of a multi-purpose and centralized facility for the disassembly and packaging of spent nuclear fuel to support the various segments of the DOE Waste Management System. Appendices, 11:31484 (R;US)
Design
Feasibility studies for a radioactive waste repository in a deep clay formation, 11:31511 (R;FR)
Intrusion
Probabilistic analysis of human intrusion in a high level nuclear waste repository in salt using draft EPA assumptions, 11:31608 (BA;US)
Performance
Probabilistic analysis of human intrusion in a high level nuclear waste repository in salt using draft EPA assumptions, 11:31608 (BA;US)
Planning
Nevada Nuclear Waste Storage Investigations project plan, 11:31517 (R;US)
Site Selection
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)

RADIOACTIVE WASTE MANAGEMENT
Managing the Department of Energy's hazardous and mixed defense wastes, 11:31496 (R;US)
Materials
Purpose of the Materials Characterization Center, 11:31556 (BA;US)
Research Programs
Canadian Nuclear Fuel Waste Management Program. Annual report, 1984, 11:31491 (R;CA)
Chemical Technology Division annual technical report, 1985, 11:31965 (R;US)

RADIOACTIVE WASTE PROCESSING
Canadian Nuclear Fuel Waste Management Program. Annual report, 1984, 11:31491 (R;CA)
Inorganic Ion Exchangers
Method of storing radioactive wastes using modified tobermorite, 11:31547 (P;US)
Transmutation
Accelerator for nuclear transmutation, 11:31514 (R;FR;In French)

RADIOACTIVE WASTE STORAGE
Packaging
Dose rates of waste packagings. A manual for activity determination of single radionuclide mixtures in standardized waste packagings resulting from dose rate limits, 11:31518 (R;DE;In German)

Risk Assessment
Niagara Falls Storage Site annual site environmental monitoring report. Calendar year 1985, 11:32760 (R;US)
Waste Forms
Method of storing radioactive wastes using modified tobermorite, 11:31547 (P;US)

RADIOACTIVE WASTES
See also ALPHA-BEARING WASTES
HIGH-LEVEL RADIOACTIVE WASTES
LOW-LEVEL RADIOACTIVE WASTES
RADIOACTIVE EFFLUENTS
Solidification
Method of storing radioactive wastes using modified tobermorite, 11:31547 (P;US)
Underground Disposal
On the equations for the flow of concentrated salt solution through a porous medium, 11:31582 (R;GB)
Vitrification
Method of storing radioactive wastes using modified tobermorite, 11:31547 (P;US)

RADIOAPPLICATORS
See RADIATION SOURCES

RADIOASSAY
Statistics
Accuracy and detection limits for bioassay measurements in radiation protection. Statistical considerations, 11:32337 (R;US)

RADIOBIOLOGY
Research Programs
Radiological Research Accelerator Facility. Progress report, April 1, 1985-March 31, 1986, 11:32843 (R;US)

RADIOCARBON DATING
See CARBON 14
ISOTOPE DATING

RADIOCHEMICAL ANALYSIS
Accuracy
Accuracy and detection limits for bioassay measurements in radiation protection. Statistical considerations, 11:32337 (R;US)

RADIODIAGNOSIS (RADIONUCLIDES)

RADIOPHARMACEUTICALS
Chemical Preparation
[Development of gamma-emitting, receptor-binding radiotracers for imaging the brain and pancreas]. Progress report, March 1, 1985-February 1, 1986, 11:32823 (R;US)
Carbon-11 labelled phosgene new synthesis - medical interest, 11:32393 (R;FR;In French)
RADIOSURGERY
See RADIOTHERAPY
RADIOTHERAPY
See also NEUTRON THERAPY
Effect of antibiotic decontamination of the GI tract on survival time after neutron and gamma irradiation, 11:32821 (RA;US)
RADIUM
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
RADIUM 219
Energy Levels
Intermediate and weak coupling in ^{219}Ra, 11:33158 (J;US)
RADIUM SULFATES
Solubility
Thermodynamics and geochemistry of Ca, Sr, Ba, and Ra sulfates in some deep brines from the Palo Duro Basin, Texas, 11:32901 (BA;US)
RADON
Alpha Detection
Radon detection in soils by solid state nuclear track detectors, 11:32604 (R;BR)
Chemical Reactions
Chemical properties of radon, 11:32345 (R;US)
Ecological Concentration
Radon in homes and other technologically enhanced radioactivity, 11:32748 (BA;US)
Indoor Air Pollution
Radon in homes and other technologically enhanced radioactivity, 11:32748 (BA;US)
Pollution Sources
Radon in homes and other technologically enhanced radioactivity, 11:32748 (BA;US)
Radiation Monitoring
Metrology and monitoring of radon, thoron and their daughter products, 11:33231 (R;XN)
Radioecological Concentration
Evaluation of indoor aerosol control devices and their effects on radon progeny concentrations. Revision, 11:32713 (R;US)
Experimental protocol and preliminary results of air infiltration rate measurements in Tennessee Valley homes, 11:32709 (R;US)
Indoor pollutants in 70 houses in the Tennessee Valley Area: study design and measurement methods, 11:32708 (R;US)
RADON 208
Energy Levels
Nuclear data sheets for A = 208, 11:33160 (J;US)
Energy-Level Transitions
Nuclear data sheets for A = 208, 11:33160 (J;US)
RADON 220
Radiation Monitoring
Metrology and monitoring of radon, thoron and their daughter products, 11:33231 (R;XN)
RADON 222
Diffusion
Diffusion of radon in candidate soils for covering uranium-mill tailings, 11:31573 (BA;US)
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
Inhibition
Asphalt emulsion radon barrier systems for uranium mill tailings: A summary of the technology, 11:31571 (BA;US)
Radioecological Concentration
Mathematical simulation of contaminant distribution in and around the uranium mill tailing piles, Riverton, Wyoming, 11:31601 (BA;US)
RAILROAD CARS
Hazardous Materials Spills
Hazardous materials accident report - anhydrous hydrogen fluoride release from NATX 9408, Train No. BNEI3Y at Conrail's Receiving Yard, Elkhart, Indiana, February 4, 1985, 11:31986 (R;US)
RAMAN EFFECT
Frequency Mixing
Solitons and four-wave mixing, 11:33278 (J;US)
Research Programs
Photon scattering and interaction analysis of interfacial corrosion and catalysis. Technical progress report, 1 February 1982-30 January 1986, 11:32932 (R;US)
Solitons
Solitons and four-wave mixing, 11:33278 (J;US)
RAPID TRANSIT SYSTEMS
Financing
Dedicated funding arrangements for public transit systems. Final report, 11:31972 (R;US)
RARE EARTH ALLOYS
See also LANTHANUM ALLOYS
Phase Diagrams
Systematics of the intra-rare-earth binary alloy systems, 11:32219 (J;CH)
RARE EARTH COMPOUNDS

RECYCLE (FUEL)
See FUEL CYCLE
REDUCTION
For chemical reactions only.
Catalysts
Selective catalytic reduction for coal-fired power plants: pilot plant results. Final report, 11:31779 (R;US)
REFINER-MARKETERS
See MARKETERS
REFRACTORIES
Corrosion
Evaluation of materials performance in a large-scale glass melter after two years of vitrifying simulated SRP defense waste, 11:31566 (BA;US)
Deformation
X-ray line profile analysis of shock-modified compounds, 11:32237 (R;US)
Elasticity
Mathematical model for the determination of thermal spalling in refractory material on basis of the practical relationship of the appearance of rupture, physical properties and physical conditions, 11:31317 (R;XE)
Explosive Forming
X-ray line profile analysis of shock-modified compounds, 11:32237 (R;US)
REFUSE
See SOLID WASTES
REFUSE DERIVED FUELS
Anaerobic Digestion
Preliminary evaluation of the effects of A d-RDF binding agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
Binders
Preliminary evaluation of the effects of A d-RDF binding agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
Combustion Products
Analysis of costs and cost effectiveness of SO_2 control for mixed-fuel-fired steam generating units. Final report, 11:31782 (R;US)
Heat Treatments
Preliminary evaluation of the effects of A d-RDF binding agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
Particle Size
Preliminary evaluation of the effects of A d-RDF binding agent, RDF particle size and heat pretreatment on efficiency of anaerobic digestion of RDF (Densified refuse derived fuel), 11:31640 (RA;US)
Production
In-forest dried (IFD) wood residue fuel technology development. Final report on batch IFD system, 11:31662 (R;US)
REGENERATORS
Evaluation
Evaluation of selected energy-recovery systems. Working paper, 11:32107 (R;US)
Marketing
Evaluation of selected energy-recovery systems. Working paper, 11:32107 (R;US)
REGULATIONS

Velocity
Condition for pressure isotropy, 11:32971 (J;US)
REMOTE SENSING
Meetings
Remote sensing; Proceedings of the meeting, Arlington, VA, May 1, 2, 1984, 11:32690 (B;US)
REMOTE VIEWING EQUIPMENT
Design
Preparation and deployment of the bottom ocean monitor for long term photographic observations of the sea floor, 11:31531 (RA;US)
RENEWABLE ENERGY SOURCES
See also BIOMASS
WIND POWER
Economic perspectives on regional energy development issues. Working paper, 11:31410 (R;US)
Economic Impact
Local employment impact of conservation and renewable energy measures: input/output analysis with a microcomputer, 11:32042 (RA;US)
Information
Register of R and D projects in the Department of Energy Programme on Renewable Energy Sources, 11:31990 (R;GB)
Input-Output Analysis
Local employment impact of conservation and renewable energy measures: input/output analysis with a microcomputer, 11:32042 (RA;US)
Reviews
Renewable energy R and D programmes, 11:31991 (R;GB)
RENORMALIZATION
Monte Carlo Method
Monte Carlo Renormalization Group: a review, 11:33070 (R;US)
RESEARCH PROGRAMS
To be used jointly with descriptor(s) for subject field and/or organization concerned.
Joint Ventures
Extending the gasification program research and development/industrial dollar through joint government/industry funding, 11:31328 (J;US)
RESEARCH REACTORS
See also BSR-1 REACTOR
BSR-2 REACTOR
HFBR REACTOR
IEAR-1 REACTOR
RPT REACTOR
ZENITH REACTOR
Power Distribution
Possibilities of power distribution smoothing in the modernized TVR-M heavy water reactor, 11:31883 (R;SU;In Russian)
RESERVOIR PRESSURE
Mathematical Models
Preliminary studies of two-phase effects on pressure transient data, 11:31767 (R;US)
RESERVOIR ROCK
Fracture Mechanics
Rock matrix and fracture analysis of flow in western tight gas sands, 11:31425 (RA;US)
The sizing of a hot dry rock reservoir from a hydraulic fracturing experiment, 11:31768 (BA;US)
Heterogeneous Effects
Determining possible correlations between pseudo Dykstra-Parsons coefficient and deposystem types, 11:31393 (R;US)
Selected mathematical methods for reservoir characterization: state-of-the-art review. Topical report, Project BE1, Task 2, 11:31391 (R;US)
Permeability
Adaptation of the black oil simulator to two-phase and three-phase relative permeability determination using unsteady-state technique. Status report, Project BE1, Task 4, 11:31392 (R;US)
Determining possible correlations between pseudo Dykstra-Parsons coefficient and deposystem types, 11:31393 (R;US)
Physical Properties
Rock matrix and fracture analysis of flow in western tight gas sands, 11:31425 (RA;US)
Stress Analysis
In-situ stress determination from wellbore elongation measurements, 11:31387 (BA;US)
Stresses
In-situ stress state in the mounds test well as determined by the anelastic strain recovery method, 11:31401 (BA;US)
RESIDENCES

HOUSES
Air Source Heat Pumps
Double effect absorption heat pump. Phase 2 and 2A. Final report, October 1982-May 1984, 11:32076 (R;US)
Cogeneration
Model of residential cogeneration combining microcomputer and mainframe programs, 11:32052 (RA;US)
DEUS
Dual energy use for industrial, commerical, and building applications, 11:32088 (B;US)
Energy Analysis
Building energy monitoring and analysis (BEMA), 11:32047 (RA;US)
Microcomputer program for energy analysis of residences, 11:32063 (RA;US)
Preliminary validation of EEDO: energy economics of design options, 11:32059 (RA;US)
solASEC: an education thermal analysis program for a continuum of designs from classical passive through superinsulation, 11:32064 (RA;US)
Energy Conservation
Building energy monitoring and analysis (BEMA), 11:32047 (RA;US)
Monovalent gas heat pump for all-year use, complex Felix-Klein-Strasse, 8520 Erlangen. Final report, 11:32037 (R;DE;In German)
Energy Consumption
Electricity savings one to three years after participation in the BPA residential weatherization program, 11:32072 (R;US)
Experiences in monitoring the thermal performance of an earth-sheltered quadruplex, 11:32051 (RA;US)
Energy Efficiency
Electricity savings one to three years after participation in the BPA residential weatherization program, 11:32072 (R;US)
Heat Transfer
Calculation of heat flux through a wall containing a cavity: comparison of several models, 11:32068 (R;US)
Heating Systems
Monovalent gas heat pump for all-year use, complex Felix-Klein-Strasse, 8520 Erlangen. Final report, 11:32037 (R;DE;In German)
Passive Solar Cooling Systems
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
Passive Solar Heating Systems
Development of an evaluation method for passive solar design tools, 11:31740 (RA;US)
DHC: a diurnal heat capacity program for microcomputers, 11:31744 (RA;US)
Passive solar design: SUPERCALC performs SLR, 11:31745 (RA;US)
Solar sun space, 11:31747 (RA;US)
Use of microcomputers for performance evaluation of residential buildings, 11:31738 (RA;US)
Seismic Effects
Structural observations of the March 3, 1985 Chilean earthquake, 11:32497 (RA;US)
Sensible Heat Storage
DHC: a diurnal heat capacity program for microcomputers, 11:31744 (RA;US)
Space HVAC Systems
Methodology for hourly simulation of residential HVAC equipment, 11:32065 (RA;US)
Weatherization
Electricity savings one to three years after participation in the BPA residential weatherization program, 11:32072 (R;US)

RESIDENTIAL SECTOR
Energy Conservation
International comparison of residential gas use and conservation, 11:31436 (BA;US)
Energy Consumption
Energy use in the service sector: an international perspective, 11:32029 (RA;US)
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)
International comparison of residential gas use and conservation, 11:31436 (BA;US)
Energy Models
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)
Fuels
Examination of sharing fractions for prices and quantities, 11:31975 (R;US)
RESIDUES (RADIOACTIVE)

RESPIRABLE DUSTS
See DUSTS
RESTAURANTS
Water Heating
Using a microcomputer for the evaluation of heat pump water heaters in the food service environment, 11:32053 (RA;US)
RETINOIC ACID
Absorption Spectra
Twenty-two carbon homologue of 11-cis retinal. Photophysical and photochemical properties, 11:32380 (J;NL)
Emission Spectra
Twenty-two carbon homologue of 11-cis retinal. Photophysical and photochemical properties, 11:32380 (J;NL)
REVERSE-FIELD PINCH
Design
Compact reversed-field pinch reactors (CRFPR), 11:33405 (R;US)
Equilibrium
Calculation of RFP equilibrium in ZT-40M by finite-beta model, 11:33384 (J;JP)
RF SYSTEMS
Frequency Control
Frequency scaling of the lower-hybrid current drive density limit on the Versator II tokamak, 11:33374 (J;US)
Power
RF ramp-up efficiency versus power, 11:33375 (J;US)
RHENIUM COMPOUNDS
Crystallization
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Roughness
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Stability
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
RHINE RIVER
Chemical Composition
Numerical tables. Physical and chemical analyses of Rhine water 1984, 11:32779 (R;DE;In German, French and Dutch)
Contamination
Numerical tables. Physical and chemical analyses of Rhine water 1984, 11:32779 (R;DE;In German, French and Dutch)
Water Pollution Control
Numerical tables. Physical and chemical analyses of Rhine water 1984, 11:32779 (R;DE;In German, French and Dutch)
RHO-765 RESONANCES
Particle Production
Measurement of total cross sections of rho°-meson interaction with intranuclear nucleons in π^- C interactions at 5 GeV/c, 11:32988 (R;SU;In Russian)
Meson resonance production in the parton model with account for transverse quark motion, 11:33016 (RA;SU;In Russian)
RHODIUM BORIDES
Critical Field
Origin of the anisotropic upper critical fields in single crystals of superconducting rare-earth ternary borides, 11:32238 (J;US)
Ferromagnetism
Influence of superconductivity on magnetic exchange interactions, 11:32240 (J;US)
Superconductivity
Influence of superconductivity on magnetic exchange interactions, 11:32240 (J;US)
RHYOLITES
Hydrothermal Alteration
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
RICHLAND NPR REACTOR
See N-REACTOR
RIEMANN WAVES

RHINE RIVER
Flow Rate
Diverting structure's effects on a river flow time series, 11:31664 (J;US)
RNA POLYMERASES
Purification
Cloning and expression of the gene for bacteriophage T7 RNA polymerase, 11:32811 (J;US)
RO-07-0582
See MISONIDAZOLE
ROAD TRANSPORT
Personnel
17 May 1985 - Ministerial Order made in implementation of Sections 3, 6 and 8 of the Royal Order of 5 November 1982 on training certificates for drivers of vehicles for road transport of hazardous materials in containers, 11:31486 (R;BE;In French and Dutch)
ROBINSON-2 REACTOR
Pressure Vessels
Reactor pressure vessel failure probability following through-wall cracks due to pressurized thermal shock events, 11:31953 (R;US)
Reactor Operation
Reactor pressure vessel failure probability following through-wall cracks due to pressurized thermal shock events, 11:31953 (R;US)
Spent Fuel Elements
Characterization of LWR spent fuel approved testing materials for radionuclide release studies, 11:31837 (BA;US)
ROBOTS
Design
Robotic burnishing system for solid film lubricant coated parts, 11:32414 (R;US)
Underwater Operations
Welding robots for underwater use, 11:32522 (R;DE;In German)
ROCK DRILLING
Spallation
Thermal spallation excavation of rock, 11:32521 (R;US)
ROCK SALT
See SALT DEPOSITS

ROCKET ENGINES
Combustion Kinetics
Numerical analysis of SSME preburner injector atomization and combustion processes, 11:32400 (BA;US)
ROCK-FLUID INTERACTIONS
Hydrothermal waste package interactions with methane-containing basalt groundwater, 11:32304 (BA;US)
ROCKS
See also IGNEOUS ROCKS
SEDIMENTARY ROCKS
Deformation
Determination of rock mass deformation modulus during hydraulic fracturing, 11:32890 (BA;US)
Failures
Analysis and observation of keyblock occurrence in tunnels in granite, 11:32886 (R;US)
Stresses
Seismic monitoring of hydraulic fracturing: techniques for determining fluid flow paths and state of stress away from a wellbore, 11:32881 (R;US)
ROCKY FLATS PLANT
Safety
Natural phenomena risk assessment at Rocky Flats Plant, 11:32489 (RA;US)
RODS (FUEL)
See FUEL RODS
ROOFS
Solar Cell Arrays
Photovoltaic Membrane (PVM) Roof System. Technical progress report, first quarter 1986, 11:31677 (R;US)
ROTATING PLASMA
Charged-Particle Transport
Toroidal viscosity and ambipolarity in the neoclassical transport theory of axisymmetric tori, 11:33330 (J;US)
Dispersion Relations
Electromagnetic solitary vortices in a rotating plasma, 11:33327 (J;US)
Electromagnetic Radiation
Electromagnetic solitary vortices in a rotating plasma, 11:33327 (J;US)
Kinetic Equations
Toroidal viscosity and ambipolarity in the neoclassical transport theory of axisymmetric tori, 11:33330 (J;US)
Nonlinear Problems
Electromagnetic solitary vortices in a rotating plasma, 11:33327 (J;US)
Solitons
Electromagnetic solitary vortices in a rotating plasma, 11:33327 (J;US)
Viscosity
Toroidal viscosity and ambipolarity in the neoclassical transport theory of axisymmetric tori, 11:33330 (J;US)
ROTORS
Magnetic Bearings
Magnetic bearings: an adaptive solution to motion-control problems, 11:32421 (R;US)
RPT REACTOR
Fuel Element Clusters
Method of fuel assembly power control by gaseous absorber for experimental study of power reactor fuel elements in the MR reactor under power transients, 11:31881 (R;SU;In Russian)
Neutron Absorbers
Method of fuel assembly power control by gaseous absorber for experimental study of power reactor fuel elements in the MR reactor under power transients, 11:31881 (R;SU;In Russian)
RUBBERS
Physical Radiation Effects
First results from electron-photon damage equivalence studies on a generic ethylene-propylene rubber, 11:32248 (R;US)
Tensile Properties
First results from electron-photon damage equivalence studies on a generic ethylene-propylene rubber, 11:32248 (R;US)
RUBIDIUM
Diffusion
Rubidium-strontium geochronologic systematics in igneous contact zones: analog for ^{90}Sr and ^{137}Cs behavior in the near field, 11:32872 (BA;US)
RUBIDIUM 93

SANITARY LANDFILLS
Degassing
Chemical and microbiological analysis of Aveley Landfill, England, 11:31645 (RA;US)
Demonstration Programs
Design, operation, and results of the controlled landfill project Mountain View, California, 11:31644 (RA;US)
Gaseous Wastes
Gas from waste dumps - a source of danger or of energy, 11:31663 (RA;DE;In German)
Leachates
Leachate collection and gas migration and emission problems at landfills and surface impoundments. Final report, September 1983-March 1985, 11:32727 (R;US)
Methanotrophic Bacteria
Methane-oxidizing bacteria in sanitary landfills, 11:31643 (RA;US)
Sampling
Use of in vitro anaerobic landfill samples for estimating landfill gas generation rates, 11:31642 (RA;US)
Vapors
Leachate collection and gas migration and emission problems at landfills and surface impoundments. Final report, September 1983-March 1985, 11:32727 (R;US)
SAVANNAH RIVER PLANT
Birds
Bald and Golden Eagles of the SRP. [Annual report, 1986], 11:32765 (R;US)
Hydrogen Storage
Use of metal hydrides for handling tritium, 11:33425 (J;US)
Research Programs
Savannah River Laboratory monthly report, 11:31886 (R;US)
Savannah River Laboratory monthly report, 11:31507 (R;US)
Safety
Tornado risk analysis at Savannah River Plant using windspeed damage thresholds and single building strike frequencies, 11:32506 (RA;US)
Safety Engineering
Standardization of natural phenomena risk assessment methodology at the Savannah River Plant, 11:32505 (RA;US)
Tritium Extraction Plant
Moderator detritiation at the Savannah River Plant, 11:33414 (J;US)
SCALAR MESONS
Glueballs
To the problem on a nature of the G(1590) meson, 11:33023 (R;SU;In Russian)
Particle Decay
To the problem on a nature of the G(1590) meson, 11:33023 (R;SU;In Russian)
SCANDIUM 45 TARGET
Proton Reactions
Study of excited-state GDR's in 1f-2p shell nuclei, 11:33127 (RA;US)
SCANNERS (OPTICAL)
See OPTICAL SCANNERS
SCATTERING
See also MULTIPLE SCATTERING
Calibration
Calibration of neutron survey instruments, scatter corrections for a population of instruments and organizational aspects, 11:32631 (RA;US)
Energy Dependence
Calculation of critical energies as a function of nuclear size, 11:33178 (RA;US)
Resonance
On a description of resonances in an oscillator representation of the scattering theory, 11:33181 (R;SU;In Russian)
SCATTERING AMPLITUDES
Analytic Functions
Practical analyticity of scattering amplitudes, 11:33091 (RA;SU;In Russian)
Integrals
Equality of some integrals from real and imaginary parts of a scattering amplitude, 11:33090 (RA;SU;In Russian)
SCHOOL FACILITIES
See EDUCATIONAL FACILITIES
SCHOOL PLANT
See EDUCATIONAL FACILITIES
SCHOOLS
See EDUCATIONAL FACILITIES
SCHROEDINGER EQUATION
Green Function
Integrals of motion and symmetry of quantum systems, 11:33254 (RA;SU;In Russian)
WKB Approximation
Improved WKB radial wave functions in several bases, 11:33276 (J;US)
SCINTILLATION CHAMBERS
See SCINTILLATION COUNTERS
SCINTILLATION COUNTERS
See also LIQUID SCINTILLATION DETECTORS
Performance
A high-pressure ^{3}He gas scintillation neutron spectrometer, 11:33340 (J;US)
SCINTILLATION DETECTORS
See SCINTILLATION COUNTERS
SCOTLAND
See UNITED KINGDOM
SCRUBBERS
Corrosion Protection
Mechanisms of failure of coatings used in flue gas desulfurization systems, 11:32178 (R;US)
SEA BED
Radioactive Waste Disposal
1983 Subseabed Disposal Program: Systems. Annual report, October 1982-September 1983, 11:31544 (R;US)
Assessment of the risk of embrittlement of a steel container by hydrogen picked up on the ocean bed, 11:31492 (R;GB)
Distribution of glacial erratics in the Northeast Atlantic. Final report, 11:31513 (R;GB)
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
SEA DISPOSAL
See MARINE DISPOSAL
SEA LEVEL
Variations
Long-term climate change in observed physical properties of the oceans, 11:32905 (R;US)

SEALING MATERIALS
Hydrothermal Alteration
Geochemical performance evaluation and characterization of a potential cementitious repository sealing material for application in the Topopah Spring tuff NNWSI investigations, 11:32324 (BA;US)
Performance
Geochemical performance evaluation and characterization of a potential cementitious repository sealing material for application in the Topopah Spring tuff NNWSI investigations, 11:32324 (BA;US)
Permeability
Cementitious mixtures for sealing access shafts/boreholes through evaporite and clastic rocks in a radioactive-waste repository, 11:32325 (BA;US)
Porosity
Cementitious mixtures for sealing access shafts/boreholes through evaporite and clastic rocks in a radioactive-waste repository, 11:32325 (BA;US)
Thermal Conductivity
Cementitious mixtures for sealing access shafts/boreholes through evaporite and clastic rocks in a radioactive-waste repository, 11:32325 (BA;US)
SEAS
See also ATLANTIC OCEAN
PACIFIC OCEAN
Ambient Temperature
Long-term climate change in observed physical properties of the oceans, 11:32905 (R;US)
Density
Long-term climate change in observed physical properties of the oceans, 11:32905 (R;US)
Salinity
Long-term climate change in observed physical properties of the oceans, 11:32905 (R;US)
SEAWATER
Corrosive Effects
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
SEAWEEDS
Energy Source Development
Pt. II: Biomass from offshore sea areas of Europe, 11:31696 (RA;DE)
SEBACEOUS GLANDS
See SKIN
SECONDARY BATTERIES
See ELECTRIC BATTERIES
SEDIMENTARY ROCKS
See also SANDSTONES
SHALES
Geologic Structures
Digital processing of Landsat tm images for lineament occurrence and spatial frequency in sedimentary rocks, 11:32880 (R;US)
SEDIMENTS
Acidification
Chemical composition of precipitation and watershed samples collected at Deep Creek Lake, Garrett County, Maryland. Final report, 11:32783 (R;US)
Chemical Composition
Pore water geochemistry and the oxidation of sedimentary organic matter: Hatteras Abyssal Plain 1981, 11:31534 (RA;US)
Contamination
Burrowing behavior of sand lance, Ammodytes hexapterus: effects of oil-contaminated sediment, 11:31414 (J;GB)
Geochemistry
Lithology and surficial sediment distribution: northern Hatteras Abyssal Plain, 11:31540 (RA;US)
Pore water geochemistry and the oxidation of sedimentary organic matter: Hatteras Abyssal Plain 1981, 11:31534 (RA;US)
Lithology
Lithology and surficial sediment distribution: northern Hatteras Abyssal Plain, 11:31540 (RA;US)
Northern Hatteras Abyssal Plain sediments (EN-071) geotechnical analyses, 11:31541 (RA;US)
Seismic echo character northern Hatteras Abyssal Plain, 11:31537 (RA;US)
Mechanical Properties
Study of the penetration of projectiles into marine sediments, 11:31509 (R;FR;In French)
Oxidation
Pore water geochemistry and the oxidation of sedimentary organic matter: Hatteras Abyssal Plain 1981, 11:31534 (RA;US)
Radionuclide Migration
Study of elementary absorption in the marine sediments of the North Atlantic Ocean deeps, 11:31508 (R;FR;In French)
Topography
Bathymetry and acoustic echo character lower continental rise study area, E-N2, 11:31538 (RA;US)
Endeavor cruise 071 navigation and bathymetry, northern Hatteras Abyssal Plain, 11:31533 (RA;US)
Seismic echo character northern Hatteras Abyssal Plain, 11:31537 (RA;US)
SEEDS
Marketing
National conference on grain marketing patterns, 11:32842 (R;US)
Transport
National conference on grain marketing patterns, 11:32842 (R;US)
SEISMIC DETECTION
Verification
Comprehensive Test Ban Treaty seismic verification decision analysis computer model. Volume 1, 11:32688 (R;US)
Comprehensive Test Ban Treaty seismic verification decision analysis computer model. Volume 2, 11:32689 (R;US)
SEISMIC EFFECTS
Building Codes
Development of new codes for seismic design criteria, 11:32485 (RA;US)
Data Acquisition
Earthquake experience data on power and industrial structures: applications to seismic design and evaluation, 11:32499 (RA;US)
Evaluation
Specification of seismic qualification environment for equipment, 11:32501 (RA;US)
Use of walk through procedures to minimize seismic upgrade for nuclear facilities, 11:32495 (RA;US)
Hazards
Seismic upgrading of the Brookhaven High Flux Beam Research Reactor, 11:32491 (RA;US)
Seismic vulnerability study of the nation's uranium enrichment plants, 11:32488 (RA;US)
Mathematical Models
Natural phenomena hazards project for Department of Energy sites, 11:32479 (RA;US)
Risk Assessment
Lawrence Berkeley Laboratory upgrading approaches to existing facilities, 11:32493 (RA;US)
Natural phenomena hazards project for Department of Energy sites, 11:32479 (RA;US)
Seismic vulnerability study of the nation's uranium enrichment plants, 11:32488 (RA;US)
Use of walk through procedures to minimize seismic upgrade for nuclear facilities, 11:32495 (RA;US)
SEISMIC EVENTS
See also EARTHQUAKES
Hazards
Proposed changes to the seismic design provisions of the Uniform Building Code, 11:32484 (RA;US)
Review of seismic probabilistic risk assessment and the use of sensitivity analysis, 11:32508 (RA;US)
Risk Assessment
Overview of the probabilistic risk assessment approach, 11:32504 (RA;US)
SEISMOLOGY
Research Programs
Research and development activities of the Seismology Section for the period January 1982-December 1983, 11:32687 (R;IN)

SELENIUM
Migration
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments, 11:31341 (RA;US)
SELENIUM ALLOYS
Josephson Effect
Josephson oscillations of charge density waves, 11:33245 (R;US)
SELENIUM IONS
Electron-Ion Collisions
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
Population Inversion
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
X-Ray Spectra
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
SELF-PUMPING SYSTEMS
Performance Testing
Passive space heating with a self-pumping vapor system, 11:31752 (R;US)
SELLAFIELD REPROCESSING PLANT
Liquid Wastes
Liquid discharge to sea/rivers/lakes. The solubility of TBP/OK in aqueous media, 11:31478 (R;GB)
Radioactive Waste Disposal
Liquid discharge to sea/rivers/lakes. The solubility of TBP/OK in aqueous media, 11:31478 (R;GB)
Solvents
Liquid discharge to sea/rivers/lakes. The solubility of TBP/OK in aqueous media, 11:31478 (R;GB)
SELLERS
See MARKETERS
SEMICIRCULAR SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
SEMICONDUCTOR DEVICES
See also SEMICONDUCTOR LASERS
SEMICONDUCTOR RESISTORS
Testing
TA683 test chip layout documentation, 11:32513 (R;US)
SEMICONDUCTOR LASERS
Coupling
Interelement coupling in gain-guided diode laser arrays, 11:32455 (J;US)
Fabrication
Room-temperature operation of GaAs/AlGaAs diode lasers fabricated on a monolithic GaAs/Si substrate, 11:32440 (R;US)
Gain
14-GHz operation of Q-switched diode lasers, 11:32439 (R;US)
Laser Cavities
Injection locking of diode lasers, 11:32457 (J;US)
Mode Locking
Direct modulation and active mode locking of ultrahigh-speed GaAlAs lasers at frequencies up to 18 GHz, 11:32448 (R;US)
Injection locking of diode lasers, 11:32457 (J;US)
Modulation
Direct modulation and active mode locking of ultrahigh-speed GaAlAs lasers at frequencies up to 18 GHz, 11:32448 (R;US)
Operation
Room-temperature operation of GaAs/AlGaAs diode lasers fabricated on a monolithic GaAs/Si substrate, 11:32440 (R;US)
Q-Switching
14-GHz operation of Q-switched diode lasers, 11:32439 (R;US)
SEMICONDUCTOR MATERIALS
If possible index also the specific compounds.
Electron Spin Resonance
Defect identification in high-purity semiconductors, 11:32281 (J;US)
Point Defects
Elastic strain energy and forces on point defects in a two-phase medium, 11:32279 (J;US)
Purification
Defect identification in high-purity semiconductors, 11:32281 (J;US)
Strains
Compound semiconductor strained-layer superlattices, 11:32512 (R;US)
Elastic strain energy and forces on point defects in a two-phase medium, 11:32279 (J;US)
X-Ray Diffraction
Angular dependence of photo-emf on X-ray diffraction in ideal crystals of semiconductors with p-n junction, 11:33215 (R;SU;In Russian)
SEMICONDUCTOR RESISTORS
Chemical Preparation
Chemical preparation and properties of high-field zinc oxide varistors, 11:32515 (J;US)
Electrical Properties
Chemical preparation and properties of high-field zinc oxide varistors, 11:32515 (J;US)
SENIOR CENTERS
See PUBLIC BUILDINGS
SEPARATION PROCESSES
See also HEAVY MEDIA SEPARATION
Research Programs
Separation science and technology: an ORNL perspective, 11:32338 (R;US)
Reviews
Separation science and technology: an ORNL perspective, 11:32338 (R;US)
SEQUESTRENE
See EDTA
SERI
See SOLAR ENERGY RESEARCH INSTITUTE
SERVICE SECTOR
Energy Consumption
Energy use in the service sector: an international perspective, 11:32029 (RA;US)
SEWAGE
See also SEWAGE SLUDGE
Water Treatment
Use of macro and microphytes for water pollution control: a practical demonstration, 11:32777 (R;IT;IT)
SEWAGE SLUDGE
Anaerobic Digestion
Combined metabolism of butyric acid and waste activated sludge at thermophilic temperatures, 11:31634 (RA;US)
Gasification of concentrated particulate and solid substrates by biphasic anaerobic digestion, 11:31637 (RA;US)
Nutrient requirements for anaerobic digestion, 11:31631 (RA;US)
Bioconversion
Bioconversion of municipal solid waste and sewage sludge to ethanol, 11:31658 (RA;US)
SHAFTS
Sealing Materials
Cementitious mixtures for sealing access shafts/boreholes through evaporite and clastic rocks in a radioactive-waste repository, 11:32325 (BA;US)
SHALES
Hydraulic Fracturing
Hydraulic-fracture growth in dipping anisotropic strata as viewed through the surface deformation field, 11:31550 (BA;US)
Mechanical Properties
LLNL unconventional gas/western sands research, 11:31447 (RA;US)
SHALLOW LAND BURIAL
See GROUND DISPOSAL
SHAPED CHARGES
Prior to August 1979 CHEMICAL EXPLOSIVES and SHAPE were used.
Detonation Waves
Applications of fiber optics to detonation events, 11:32658 (RA;US)
SHEARON HARRIS-1 REACTOR
See HARRIS-1 REACTOR
SHEATHS (FUEL)
See FUEL CANS

SHIELDING
Computer Calculations
Comparison between different codes for shielding calculations for plutonium transport cask, 11:33214 (R;IT)
Heat Transfer
Temperature distribution due to the heat generation in nuclear reactor shielding, 11:31870 (R;BR;In Portuguese)
SHIELDING MATERIALS
Materials Testing
Hydramite II screening tests of potential bremsstrahlung converter debris shield materials, 11:32582 (R;US)
SHIPS
Communications
USS Pueblo incident, warning cycle. Master's thesis, 11:33461 (R;US)
Emergency Plans
USS Pueblo incident, warning cycle. Master's thesis, 11:33461 (R;US)
Energy Conservation
Surface-ship fuel savings with an optimized autopilot. Master's thesis, 11:32090 (R;US)
Propulsion Systems
Surface-ship fuel savings with an optimized autopilot. Master's thesis, 11:32090 (R;US)
SHOCK (IMPACT)
See IMPACT SHOCK
SHOCK TUBES
Numerical Analysis
Comparison of different numerical schemes for integration of hydrodynamic equations with Lagrange coordinates, 11:33250 (R;FR;In French)
Numerical Solution
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
Transport Theory
Implicit adaptative method of mesh generation for hydrodynamic equations, 11:33249 (R;FR;In French)
Wave Propagation
Some high resolution numerical schemes for hydrodynamic equation integration, 11:33248 (R;FR;In French)
SHOCK WAVES
See also DETONATION WAVES
Attenuation
Influence of reactive cases on airblast from high explosive, 11:32656 (RA;US)
Numerical Analysis
Comparison of different numerical schemes for integration of hydrodynamic equations with Lagrange coordinates, 11:33250 (R;FR;In French)
Numerical Solution
Some high resolution numerical schemes for hydrodynamic equation integration, 11:33248 (R;FR;In French)
Velocity
VISAR: interferometer quadrature signal recording by electronic streak camera, 11:32659 (RA;US)
Wave Propagation
Influence of reactive cases on airblast from high explosive, 11:32656 (RA;US)
Some high resolution numerical schemes for hydrodynamic equation integration, 11:33248 (R;FR;In French)
SHOWER COUNTERS
Detects high energy gamma radiation or high energy particles on basis of cascade showers in layered absorbers.
Calibration
Data processing on the boundaries of the GAMS-type electromagnetic calorimeter, 11:32603 (R;SU;In Russian)
Performance
UA6 electromagnetic calorimeter: performance and first results, 11:32557 (R;US)
SH-PROTEINASES
Code number 3.4.22
Enzyme Inhibitors
Primary gene products as plant defenses. Final report, November 1, 1983-October 31, 1984, 11:32794 (R;US)
SHUTIN PRESSURE
See RESERVOIR PRESSURE
SIALON
See ALUMINIUM OXIDES
SILICON NITRIDES
SIDERITE
Catalytic Effects
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
Porosity
Catalytic cracking of aromatic hydrocarbons. Final report, October 1984-March 1986, 11:31300 (R;US)
SIEGBAHN SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS
SIGMA MODEL
Supersymmetry
Dirac quantization in superspace, 11:33077 (J;US)
SIGMA-MINUS ATOMS
See HADRONIC ATOMS
SILANES
Electron Mobility
Effect of temperature and pressure on excess electron mobility in n-hexane, 2,2,4-trimethylpentane, and tetramethylsilane, 11:32350 (J;US)
SILICA
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Leaching
Mass transfer in a geologic environment, 11:32301 (BA;US)
Nuclear Magnetic Resonance
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
Phase Diagrams
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Physical Radiation Effects
Ion implantation damage processes in nuclear waste glass and other silicate glasses, 11:32309 (BA;US)
Vibrational States
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
SILICA GEL
Opacity
Aerogel, a transparent insulator for solar applicatons, 11:32087 (BA;CA)
Thermodynamic Properties
Aerogel, a transparent insulator for solar applicatons, 11:32087 (BA;CA)
SILICATES
See also CALCIUM SILICATES
MAGNESIUM SILICATES
Physical Radiation Effects
Self-radiation damage in actinide host phases of nuclear waste forms ($Ca_3Nd_6(SiO_4)_6O_2$; $Gd_2Ti_2O_7$; $CaZrTi_2O_7$), 11:32243 (BA;US)
SILICEOUS ROCK
See SANDSTONES
SILICON
Absorption Spectra
Oxygen isotope effect on the 889 cm^{-1} band in silicon, 11:32260 (J;US)
Annealing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Properties of furnace-annealed, high-resistivity, arsenic-implanted polycrystalline silicon films, 11:32273 (J;US)
Bragg Reflection
X-ray diffraction evidence of adatoms in the Si(111)7 x 7 reconstructed surface, 11:32263 (J;US)
Chemical Reactions
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Electric Conductivity
Properties of furnace-annealed, high-resistivity, arsenic-implanted polycrystalline silicon films, 11:32273 (J;US)
Electron Spin Resonance
Defect identification in high-purity semiconductors, 11:32281 (J;US)
Electronic Structure
Electronic and structural properties of a twin boundary in Si, 11:32270 (J;US)

Photoemission study of Si(111)-Ge(5 x 5) surfaces, 11:32266 (J;US)
Epitaxy
Evaluation of the Stillinger-Weber classical interaction potential for tetragonal semiconductors in nonideal atomic configurations, 11:32264 (J;US)
Grain Boundaries
Electronic and structural properties of a twin boundary in Si, 11:32270 (J;US)
Properties of furnace-annealed, high-resistivity, arsenic-implanted polycrystalline silicon films, 11:32273 (J;US)
Hardness
Damage equivalence in the irradiation of silicon, 11:32259 (R;US)
Impurities
Effect of compressive uniaxial stress on the binding energies of D^- centers in Si:P and Si:As, 11:32267 (J;US)
Ion Implantation
Direct measurements of the velocity and thickness of "explosively" propagating buried molten layers in amorphous silicon, 11:32261 (J;US)
Oxygen isotope effect on the 889 cm^{-1} band in silicon, 11:32260 (J;US)
Properties of furnace-annealed, high-resistivity, arsenic-implanted polycrystalline silicon films, 11:32273 (J;US)
Laser-Radiation Heating
Nanosecond resolution time-resolved x-ray study of silicon during pulsed-laser irradiation, 11:32277 (J;US)
Leaching
Parametric testing of a DWPF borosilicate glass, 11:32300 (BA;US)
Mixing
Ion mixing of Ni-Pt films on Si, 11:32211 (J;US)
Morphology
X-ray diffraction evidence of adatoms in the Si(111)7 x 7 reconstructed surface, 11:32263 (J;US)
Neutron Diffraction
Theoretical investigation of neutron scattering cross sections in Si and Ge, 11:33225 (J;US)
Passivation
An approach toward 20-percent-efficient silicon solar cells, 11:31719 (J;US)
Photoelectron Spectroscopy
Photoemission study of Si(111)-Ge(5 x 5) surfaces, 11:32266 (J;US)
Physical Radiation Effects
Damage equivalence in the irradiation of silicon, 11:32259 (R;US)
Proton Channeling
Rainbow effect in axial ion channeling, 11:33227 (J;US)
Purification
Defect identification in high-purity semiconductors, 11:32281 (J;US)
Recrystallization
Nanosecond resolution time-resolved x-ray study of silicon during pulsed-laser irradiation, 11:32277 (J;US)
Surface Energy
Electronic and structural properties of a twin boundary in Si, 11:32270 (J;US)
Surface Treatments
An approach toward 20-percent-efficient silicon solar cells, 11:31719 (J;US)
Vacancies
Oxygen isotope effect on the 889 cm^{-1} band in silicon, 11:32260 (J;US)

SILICON 28
Energy-Level Transitions
Compound nuclear isospin purity and the statistical decay of the GDR in light nuclei, 11:33107 (RA;US)
Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states, 11:33106 (RA;US)

SILICON 28 REACTIONS
Heavy Ion Fusion Reactions
Penetrability of the centrifugal barrier and the spin distribution of the compound nucleus, 11:33109 (RA;US)
Particle Production
Search for "subthreshold" production of antiprotons and creation of fractional charges and new particles in relativistic nuclear collisions, 11:33123 (J;US)

SILICON 28 TARGET
Photonuclear Reactions
Schematic model calculations of nucleon decay strengths from giant dipole resonances built on excited states, 11:33106 (RA;US)
Silicon 28 Reactions
Search for "subthreshold" production of antiprotons and creation of fractional charges and new particles in relativistic nuclear collisions, 11:33123 (J;US)

SILICON 29
Diffusion
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)

SILICON 30 REACTIONS
Compound-Nucleus Reactions
Excited states in neutron-deficient ^{186}Bi, 11:33151 (J;US)

SILICON 30 TARGET
Silicon 28 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymetric entrance channels, 11:33119 (R;FR;In French)
Silicon 30 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymetric entrance channels, 11:33119 (R;FR;In French)

SILICON ALLOYS
Crystallization
Stability of amorphous metal films on semiconductor substrates. Progress report, January-December 1985 (W-Si; Ni-Nb), 11:32173 (R;US)
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)

SILICON CARBIDES
Corrosion
Comparison of results of 200- and 500-h exposures of silicon carbide to a slagging coal gasification environment, 11:31295 (R;US)
Friction
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)
Materials Testing
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)
Stress Analysis
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)

SILICON HYDRIDES
See SILANES

SILICON IONS
Stopping Power
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)

SILICON NITRIDES
Physical Radiation Effects
Ceramics for fusion applications, 11:32235 (R;US)

SILICON SOLAR CELLS
Antireflection Coatings
An approach toward 20-percent-efficient silicon solar cells, 11:31719 (J;US)
Design
Advanced techniques for the measurement of recombination and transport parameters throughout solar cells, 11:31708 (RA;US)
Amorphous silicon photovoltaic modules and test devices design, fabrication and testing, 11:31688 (RA;US)
Thin-film module circuit design - practical and reliability aspects, 11:31680 (RA;US)
Thin film module development, 11:31686 (RA;US)

Thin film module, electrical configuration vs. electrical performance, 11:31689 (RA;US)
Efficiency
An approach toward 20-percent-efficient silicon solar cells, 11:31719 (J;US)
Electric Conductivity
Interconnect resistance of photovoltaic submodules, 11:31685 (RA;US)
Electric Potential
Effects of boron profiles on the open circuit voltage of p-i-n and n-i-p amorphous silicon solar cells, 11:31717 (J;US)
Electrical Insulation
Module voltage isolation and corrosion research, 11:31691 (RA;US)
Electrical Properties
Spectral response and I-V measurements of tandem amorphous-silicon alloy solar cells, 11:31707 (RA;US)
Electrochemical Corrosion
Module voltage isolation and corrosion research, 11:31691 (RA;US)
Fabrication
Amorphous silicon module development in Sohio, 11:31687 (RA;US)
Amorphous silicon photovoltaic modules and test devices design, fabrication and testing, 11:31688 (RA;US)
Hydrogenated amorphous silicon photovoltaic cells. Final report, 11:31695 (R;DE;In French)
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)
Thin film module development, 11:31686 (RA;US)
Health Hazards
Potential health and safety hazards associated with the manufacture of amorphous silicon and copper indium diselenide photovoltaic cells, 11:31722 (BA;CA)
Hot Spots
Hot-spot heating susceptibility due to reverse bias operating conditions, 11:31681 (RA;US)
Hydrogen Additions
Hydrogenated amorphous silicon photovoltaic cells. Final report, 11:31695 (R;DE;In French)
Impurities
Effects of boron profiles on the open circuit voltage of p-i-n and n-i-p amorphous silicon solar cells, 11:31717 (J;US)
Materials
Glass breaking strength - the role of surface flaws and treatments, 11:31692 (RA;US)
Performance
Advanced techniques for the measurement of recombination and transport parameters throughout solar cells, 11:31708 (RA;US)
Light-induced effects-impacts to module performance measurements and reliability testing: an overview, 11:31679 (RA;US)
Measurement techniques for evaluation of a Si:H solar cells, 11:31706 (RA;US)
Photovoltaic device performance - overview, 11:31701 (RA;US)
Thin film module, electrical configuration vs. electrical performance, 11:31689 (RA;US)
Performance Testing
Amorphous silicon module development in Sohio, 11:31687 (RA;US)
Outdoor performance testing of thin-film devices, 11:31690 (RA;US)
Quantum Efficiency
Measurement techniques for evaluation of a Si:H solar cells, 11:31706 (RA;US)
Reliability
Accelerated stress testing of thin film solar cells - development of test methods and preliminary results, 11:31682 (RA;US)
Crystalline-silicon reliability lessons for thin-film modules, 11:31678 (RA;US)
Thin-film module circuit design - practical and reliability aspects, 11:31680 (RA;US)
Safety
Electrical safety requirements: implications for the module designer, 11:31683 (RA;US)
Spectral Response
Spectral response and I-V measurements of tandem amorphous-silicon alloy solar cells, 11:31707 (RA;US)
Stability
Light-induced effects-impacts to module performance measurements and reliability testing: an overview, 11:31679 (RA;US)
Testing
Accelerated stress testing of thin film solar cells - development of test methods and preliminary results, 11:31682 (RA;US)
Amorphous silicon photovoltaic modules and test devices design, fabrication and testing, 11:31688 (RA;US)
Hot-spot heating susceptibility due to reverse bias operating conditions, 11:31681 (RA;US)

SILOXANES
Polymerization
Fundamental studies of elastomers. Annual progress report, June 15, 1985-March 21, 1986, 11:32247 (R;US)

SILVER
Charged-Particle Transport
Electronic stopping power formula for energetic ions, 11:33221 (R;SU;In Russian)
Electron-Atom Collisions
Monokinetic electron backscattering from amorphous or polycrystalline specimens, 11:32934 (R;FR;In French)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)

SIMS
See MASS SPECTROSCOPY

SINGLE CELL PROTEIN
Biosynthesis
Ethanol and chemicals from cellulosics in solid wastes, 11:31656 (RA;US)

SINGLE CRYSTALS
See MONOCRYSTALS

SKIN
Necrosis
Acute effects of cigarette smoke exposure on experimental skin flaps, 11:32861 (J;US)

SKYRME POTENTIAL
Solitons
Deuteron as a soliton in the Skyrme model, 11:33027 (J;US)

SKYRMIONS
See SKYRME POTENTIAL

SLABS
Thicker than PLATES, primarily for use in shielding studies.
Hydrogen
Determination of the energetic and technical most favourable method for removing hydrogen from slabs and plates, 11:32156 (R;DE;In German)

SLAGS
Chemical Composition
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)
Comparison of results of 200- and 500-h exposures of silicon carbide to a slagging coal gasification environment, 11:31295 (R;US)
Corrosive Effects
Comparison of results of 200- and 500-h exposures of silicon carbide to a slagging coal gasification environment, 11:31295 (R;US)
Removal
Gas turbine component screening program: fuel flexible combustor, 11:31776 (R;US)
Viscosity
Coal gasification research studies. Final report, August 20, 1982-November 30, 1984, 11:31298 (R;US)

SLC DETECTORS
Drift Chambers
Performance of the SLD Central Drift Chamber prototype, 11:32634 (R;US)

SLD
See SLC DETECTORS
SLOT OVENS
See COKE OVENS
SLOWING-DOWN THEORY (NEUTRON)
See NEUTRON SLOWING-DOWN THEORY
SLUDGES
See also SEWAGE SLUDGE
Anaerobic Digestion
Effects of the addition of propionate and butyrate to thermophilic methane-producing digesters, 11:31633 (RA;US)
Water Removal
PED: Pressurized electroosmotic dewatering, 11:31348 (D;US)
SLUGS (FUEL)
See FUEL RODS
SLURRIES
See also FUEL SLURRIES
Rheology
Preliminary investigations into fine coal dense medium cyclone processing, 11:31355 (R;AU)
SLURRIES (FUEL)
See FUEL SLURRIES
SMALL BUSINESSES
Energy Expenses
Impact of energy prices on small business. Interim report on tasks 1 and 2. Final report, 11:31979 (R;US)
SMES
See SUPERCONDUCTING MAGNETIC ENERGY STORAGE
SODIUM
Atom-Atom Collisions
Collision kernel and interatomic potential, 11:32956 (J;US)
Atom-Molecule Collisions
Reactive scattering of Na(3 $^{2}P_{3}$/sub //$_{2}$)+HCl, 11:32951 (J;US)
Correlations
Geochemistry of sodium in North Dakota lignite, 11:31351 (RA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Fire Hazards
Interpretation of the behavior of aerosols generated by a sodium pool fire, 11:31941 (RA;US)
Flame Photometry
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Flame photometric determination of Na, K and Li in uranium compounds, 11:32333 (R;BR;In Portuguese)
Frequency Mixing
Wave-mixing from unexpected atomic transitions in laser generated plasma, 11:33389 (BA;US)
Leaching
Hydrothermal studies of simulated defense waste glass plus basalt, 11:32303 (BA;US)
Parametric testing of a DWPF borosilicate glass, 11:32300 (BA;US)
SODIUM 23
Diffusion
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
SODIUM IODIDE DETECTORS
See NAI DETECTORS
SODIUM MINERALS
See MINERALS
SODIUM OXIDES
Nuclear Magnetic Resonance
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
Vibrational States
High-temperature high-resolution NMR study of ^{23}Na, ^{27}Al and ^{29}Si in molten silicates, 11:32351 (J;GB)
SODIUM SULFATES
Paramagnetism
Spin-probe spin-label studies of sodium dodecyl sulfate micelles, 11:32344 (R;BR)
SODIUM-WATER REACTIONS
See MOLTEN METAL-WATER REACTIONS
SOILS
Acidification
General Session, 11:32733 (RA;US)
Alpha Detection
Radon detection in soils by solid state nuclear track detectors, 11:32604 (R;BR)
Contamination
Equisetum and the cycling of mercury at Mount St. Helens: plant-soil relations, 1980-1984, 11:32758 (J;NL)
Leaching
Report on the vitrification and devitrification of Hanford, Washington soil. Final report, 11:31504 (R;US)
Liquefaction
Ground motions by microtremor and earthquake observations in relation to damages of the Central Japan Sea Earthquake (M = 7.7), May 26, 1983, 11:32875 (RA;US)
Radionuclide Kinetics
PRESTO-II: a low-level waste environmental transport and risk assessment code, 11:32761 (R;US)
Radionuclide Migration
Diffusion of radon in candidate soils for covering uranium-mill tailings, 11:31573 (BA;US)
Mathematical simulation of contaminant distribution in and around the uranium mill tailing piles, Riverton, Wyoming, 11:31601 (BA;US)
Migration and fixation of Uranium in the surficial environment. Case histories and applications to geochemical exploration, 11:32759 (R;FR;In French)
Predicting long-term moisture in earthen covers, 11:31572 (BA;US)
PRESTO-II: a low-level waste environmental transport and risk assessment code, 11:32761 (R;US)
Rapid seepage of contaminants through the highwall of a uranium mill tailings pit, 11:31598 (BA;US)
The effects of crystalline Fe and Mn oxides on contaminant migration through soil liners, 11:31599 (BA;US)
Sorptive Properties
Trace element attenuation characteristics of North Dakota fly ash disposal site sediments (Freundlich adsorption equation), 11:31341 (RA;US)
Vitrification
Report on the vitrification and devitrification of Hanford, Washington soil. Final report, 11:31504 (R;US)
SOJA BEAN OIL
See SOYBEAN OIL
SOLAR ACTIVITY
Magnesium Ions
Study of emission process in hot, optically thin plasma: application to solar active regions, 11:32916 (R;FR;In French)
X-Ray Spectroscopy
Study of emission process in hot, optically thin plasma: application to solar active regions, 11:32916 (R;FR;In French)
SOLAR BATTERIES
See SOLAR CELL ARRAYS
SOLAR CELL ARRAYS

Hardware enhancements to the laboratory data collection system, 11:32601 (RA;US)
Data Analysis
Data analysis system enhancements, 11:32600 (RA;US)
Stabilization
Use of the LED-PIN diode light pulser for gain stabilization of the 10" x 10" NaI spectrometer, 11:32596 (RA;US)

SPEED INDICATORS
See VELOCIMETERS

SPENT FUEL CASKS
Accidents
Impact of a fully idealised high speed train into a constrained fuel transport flask, 11:32415 (R;GB)
Impact Shock
Impact of a fully idealised high speed train into a constrained fuel transport flask, 11:32415 (R;GB)
Impact Tests
Impact testing of transportation-flasks. A review of the literature, 11:32411 (R;GB)
Performance Testing
Cask performance and interface specifications for shipment of US spent light water reactor fuel, 11:32426 (R;US)
Regulatory Guides
Standard format and content for a topical safety analysis report for a dry spent fuel storage cask, 11:31488 (R;US)
Standard format and content for the safety analysis report for onsite storage of spent fuel storage casks, 11:31487 (R;US)
Safety
Standard format and content for a topical safety analysis report for a dry spent fuel storage cask, 11:31488 (R;US)
Specifications
Cask performance and interface specifications for shipment of US spent light water reactor fuel, 11:32426 (R;US)

SPENT FUEL ELEMENTS
Inventories
Physical inventory verification exercise at a light-water reactor facility, 11:31612 (R;US)
Pyrometallurgy
Rekindled interest in pyrometallurgical processing, 11:31480 (J;US)
Rail Transport
Spent fuel transportation in the United States: commercial spent fuel shipments through December 1984, 11:31490 (R;US)
Reprocessing
Rekindled interest in pyrometallurgical processing, 11:31480 (J;US)
Road Transport
Spent fuel transportation in the United States: commercial spent fuel shipments through December 1984, 11:31490 (R;US)

SPENT FUEL STORAGE
Assessment of the use of a multi-purpose and centralized facility for the disassembly and packaging of spent nuclear fuel to support the various segments of the DOE Waste Management System, 11:31483 (R;US)
Assessment of the use of a multi-purpose and centralized facility for the disassembly and packaging of spent nuclear fuel to support the various segments of the DOE Waste Management System. Appendices, 11:31484 (R;US)
Canadian Nuclear Fuel Waste Management Program. Annual report, 1984, 11:31491 (R;CA)
Fuel and pool component performance in storage pools, 11:31809 (R;US)
Spent Fuel Casks
Standard format and content for the safety analysis report for onsite storage of spent fuel storage casks, 11:31487 (R;US)

SPENT FUELS
Oxidation
Oxidation of spent fuel at between 250 and 360°C, 11:31796 (R;US)
Sample Preparation
Hot cells preparation of testing materials, 11:31559 (BA;US)
Testing
Oxidation of spent fuel at between 250 and 360°C, 11:31796 (R;US)

SPHEROMAK DEVICES
Charged-Particle Transport
1-1 1/2 computational using poloidal flux coordinates and an integral transform technique, 11:33386 (BA;US)
Magnetic Compression
Zero-dimensional study of the compression of low-temperature spheromaks, 11:33350 (J;AT)

Plasma Diagnostics
1-1 1/2 computational using poloidal flux coordinates and an integral transform technique, 11:33386 (BA;US)

SPIDERS
Baseline Ecology
Partitioning of macroinvertebrates in leaf packs by functional group. Appendix XI, 11:32770 (R;US)

SPIN GLASS STATE
Mathematical Models
Parisi function for two spin glass models, 11:33237 (R;DK)
Renormalization
Renormalization theory for spin glasses based on eigenstates of the J matrix, 11:33236 (R;DK)

SPINELS
Physical Radiation Effects
Effects of alpha irradiation on barium hollandite and nickel-iron spinel, 11:32314 (BA;US)

SPIN-OFF
See TECHNOLOGY TRANSFER

SPIRAL ORBIT SPECTROMETERS
See FLAT MAGNETIC SPECTROMETERS

SPLINE FUNCTIONS
Bibliographies
History of the Wilson-Fowler spline, 11:33485 (R;US)

SRC PROCESS
Research Programs
Short-residence=time coal liquefaction, 11:31331 (J;US)

STAGED COMBUSTION
Additives
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
Recommendations
CaO interactions in the staged combustion of coal, 11:31372 (B;US)

STAINLESS STEEL-304
Crack Propagation
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)
Cracks
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)
Ion Implantation
Coupled thermomechanical-diffusion of mobile constituents in a deformable solid, 11:32196 (R;US)
Physical Radiation Effects
Calculated radiation damage effects of high energy proton beams, 11:32175 (R;CH)
Reactor Materials
Light-water-reactor safety materials engineering research programs. Quarterly progress report, January-March 1985. Volume 1, 11:31955 (R;US)

STAINLESS STEEL-316
Corrosion
Compatibility of ferrous alloys in a forced circulation Pb-17Li system, 11:32168 (R;US)
Influence of temperature and lithium purity on corrosion of ferrous alloys in a flowing lithium environment, 11:32167 (R;US)
Physical Radiation Effects
Creep in the stainless steel 316 irradiated with fast neutrons and alpha particles of 28 MeV, 11:32189 (RA;BR;In Portuguese)
Swelling
Comparison of swelling for structural materials on neutron and ion irradiation, 11:32163 (R;US)

STAINLESS STEEL-316L
Oxidation
Use of niobium as a substitute to molybdenum in steels with high oxidation resistance, 11:32190 (RA;BR;In Portuguese)

STAINLESS STEELS
See also STAINLESS STEEL-304
STAINLESS STEEL-316
STAINLESS STEEL-316L
Corrosion
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Nondestructive Testing
NDE of stainless steel and on-line leak monitoring of LWRs. Annual report, October 1984-September 1985. Volume 2, 11:31948 (R;US)
Physical Radiation Effects
Light ion irradiation creep, 11:32171 (RA;US)
Pitting Corrosion
Mass transfer and electrochemical kinetic interactions in localized pitting corrosion, 11:32220 (B;US)
Uses
Alloys in energy development, 11:32218 (J;CH)

STANDARD ELECTROWEAK MODEL
See WEINBERG-SALAM GAUGE MODEL

STANDING CROP
See BIOMASS

STANDING WAVES
Atom Transport
Atomic motion in a standing wave. Master's thesis, 11:32927 (R;US)

STARS
Gravitational Collapse
Neutrino diffusion in stellar collapse, 11:32923 (J;US)
Neutrinos
Neutrino diffusion in stellar collapse, 11:32923 (J;US)
Thermal Equilibrium
Equilibration of ^{176}Lu/sup g,m/ under stellar conditions, 11:32913 (RA;US)

START-UP (REACTOR)
See REACTOR START-UP

STATE BUILDINGS
See PUBLIC BUILDINGS

STATE GOVERNMENT
Energy Consumption
State energy data report. Consumption estimates, 1960-1984, 11:32027 (R;US)

STATIC RESERVOIR PRESSURE
See RESERVOIR PRESSURE

STATISTICAL MODELS
Reviews
The use of statistical models in heavy-ion reactions studies, 11:33207 (BA;US)

STEAM CONDENSERS
Cooling Systems
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Materials Testing
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)

STEAM COOLED REACTORS
Breeding Ratio
Analysis of breeding performances of the steam cooled fast reactor, 11:31844 (R;SU;In Russian)
Prospects of breeding improvements in steam cooled fast reactors with the heterogeneous cores, 11:31845 (R;SU;In Russian)
Reactor Cooling Systems
Analysis of breeding performances of the steam cooled fast reactor, 11:31844 (R;SU;In Russian)

STEAM GENERATORS
Air Pollution Abatement
Environmental assessment of an enhanced-oil-recovery steam generator equipped with a low-NOx burner. Volume 1. Technical results. Final report, January 1984-January 1985, 11:31394 (R;US)
C Codes
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)
Exhaust Gases
NO/NO/sub x/ analyses in gaseous effluent containing high concentrations of CO_2 and CH_4 using the TECO model 10AR chemiluminescent NO/NO/sub x/ analyzer, 11:31395 (R;US)

Heat Transfer
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)
Coordination of safety research for the B and W integral system test program, 11:31900 (R;US)
Hydraulics
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)
Coordination of safety research for the B and W integral system test program, 11:31900 (R;US)
Transients
COBRA-NC: a thermal-hydraulic code for transient analysis of nuclear reactor components. Equations and constitutive models. Volume 1, 11:31944 (R;US)

STEAM INJECTION
Steam Generators
NO/NO/sub x/ analyses in gaseous effluent containing high concentrations of CO_2 and CH_4 using the TECO model 10AR chemiluminescent NO/NO/sub x/ analyzer, 11:31395 (R;US)

STEAM TURBINES
Steam Condensers
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)
Turbine Blades
Titanium L-1 steam turbine blade retrofit. Final report, 11:32177 (R;US)

STEEL INDUSTRY
See METAL INDUSTRY

STEELS
See also AUSTENITIC STEELS
CARBON STEELS
CHROMIUM STEELS
FERRITIC STEELS
NICKEL STEELS
STAINLESS STEELS
Annealing
Determination of the annealing for AISI 430 steel in a continous furnace, 11:32182 (R;BR;In Portuguese)
Corrosion
Corrosion of candidate iron-base waste package structural barrier materials in moist salt environments, 11:32224 (BA;US)
Hardness
Hardness in high temperature of steels ABNT H11 and ABNT H11 modified with niobium, 11:32188 (RA;BR;In Portuguese)
Microstructure
Structural changes of carbides in a high-speed steel - M2 - after hardness and drawing back, 11:32186 (RA;BR;In Portuguese)
Protective Coatings
Chemical Technology Division annual technical report, 1985, 11:31965 (R;US)
Submerged Arc Welding
Study about the structural behavior of WStE-36N steel, 11:32157 (R;BR;In Portuguese)

STELLARATORS
Equilibrium
Toroidal helíac equilibrium, 11:33349 (J;AT)
Plasma Confinement
Consequences of time-reversal symmetry for the electric field scaling of transport in stellarators, 11:33337 (J;US)
Radio frequency breakdown and electron confinement time in a stellarator, 11:33316 (J;US)
Plasma Production
Radio frequency breakdown and electron confinement time in a stellarator, 11:33316 (J;US)

STEROIDS
Receptors
Exogenous ecdysteroids elicit low-threshold sensory responses in spiny lobsters, 11:32804 (J;US)

STIMULATED EMISSION DEVICES
See LASERS
MASERS

STOCHASTIC PROCESSES
Mathematical Models
Lattice parameter modeling of stochastic signals: some fundamental concepts, 11:32409 (R;US)
Mathematical Operators
On convergence of nuclear and correlation operators in Hilbert space, 11:33262 (R;BR)

STOPPING
See ABSORPTION

STORAGE BATTERIES
See ELECTRIC BATTERIES

STORAGE FACILITIES
Salt Caverns
Laboratory investigation for determination of the hydraulic fracture gradient in salt. Final report, 11:31415 (R;DE;In German)

STORAGE RINGS
See also PETRA STORAGE RING
SUPERCONDUCTING SUPER COLLIDER
Beam Bunching
On multi-bunch instabilities for fractionally filled rings, 11:32588 (R;DE)
Coherent Scattering
Coherent collisions during in-beam Coulomb scattering, 11:32549 (R;SU;In Russian)
Instability
On multi-bunch instabilities for fractionally filled rings, 11:32588 (R;DE)

STORAGE (SPENT FUEL)
See SPENT FUEL STORAGE

STORES
See COMMERCIAL BUILDINGS

STRAW
Acid Hydrolysis
Anaerobic digestion of hemicellulosic feedstocks, 11:31635 (RA;US)

STREAMER SPARK CHAMBERS
Stability
Operation of plastic streamer tubes with high resistive coating, 11:32606 (R;SU;In Russian)

STREAMS
See also RIVERS
Acidification
Water resource baseline data and assessment of impacts from acidic precipitation, Acadia National Park, Maine. Technical report (Final), 11:32784 (R;US)
Floods
Floods on Pope and Town Creeks and Tributary No. 1 to Lookout Creek at mile 18.91 in Dade County and Trenton, Georgia, 11:32871 (R;US)

STRESSES
Mechanics.
Measuring Methods
Demonstration of hydraulic fracturing stress measurement techniques, 11:31352 (R;AU)
Orientation
Demonstration of hydraulic fracturing stress measurement techniques, 11:31352 (R;AU)

STRING MODELS
Treating the interactions of extended particles through breaking and connection of strings.
Introduction to string field theory, 11:33072 (R;US)
Introduction to string field theory. A pedestrian approach to the covariant formulation, 11:33073 (R;US)
Compactification
Strings and their compactification from the particle viewpoint, 11:33071 (R;US)
Invariance Principles
Classification of open string models, 11:33044 (R;DE)
Invariant Imbedding
Equations of relativistic string imbedding into 6-dimensional space-time and their general solution, 11:33054 (RA;SU;In Russian)
Lectures
Strings and their compactification from the particle viewpoint, 11:33071 (R;US)

Magnetic Monopoles
Are the Dirac strings harmless, 11:33046 (R;US)
Partial Differential Equations
Equations of relativistic string imbedding into 6-dimensional space-time and their general solution, 11:33054 (RA;SU;In Russian)
Quantization
Relativistic strings with a finite number of degrees of freedom, 11:33007 (RA;SU;In Russian)
Research Programs
Particle theory and cosmology. Final report, July 16, 1984-March 31, 1986, 11:33051 (R;US)
STRIPPER FOILS
See BEAM STRIPPERS
STRIPPERS
See BEAM STRIPPERS
STRONTIUM
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Emission Spectroscopy
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
STRONTIUM 102
Beta-Minus Decay
Identification and decay of neutron-rich ^{102}Sr and level structure of A~100 Y nuclei, 11:33144 (J;US)
Energy Levels
Identification and decay of neutron-rich ^{102}Sr and level structure of A~100 Y nuclei, 11:33144 (J;US)
STRONTIUM 90
Diffusion
Rubidium-strontium geochronologic systematics in igneous contact zones: analog for ^{90}Sr and ^{137}Cs behavior in the near field, 11:32872 (BA;US)
Radiometric Analysis
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)
STRUCTURAL BUCKLING
See DEFORMATION
STRUCTURE (CRYSTAL)
See CRYSTAL STRUCTURE
STRUCTURES (BUILDINGS)
See BUILDINGS
STRUCTURES (MECHANICS)
See MECHANICAL STRUCTURES
STURM-LIOUVILLE EQUATION
Mathematical Operators
Stability of solutions to Sturm-Liouville diffusion equations, 11:33279 (J;US)
STYRENE POLYMERS
See POLYSTYRENE
SUBBITUMINOUS COAL
Ash Content
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Chemical Composition
Wyodak coal: composition, reactions, and products. Final report, 11:31335 (R;US)
Chemical Reaction Kinetics
Study of low rank coals: effect of drying on liquefaction, 11:31303 (RA;US)
Drying
Study of low rank coals: effect of drying on liquefaction, 11:31303 (RA;US)
Fly Ash
Mineralogy of low rank coal fly ash, 11:31340 (RA;US)
Grinding
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Meetings
Thirteenth biennial lignite symposium: technology and utilization of low-rank coals proceedings. Volume 2, 11:31357 (R;US)
NMR Spectra
Wyodak coal: composition, reactions, and products. Final report, 11:31335 (R;US)
Petrography
Coal pretreatment for two stage liquefaction. Quarterly report, January 1-March 31, 1986, 11:31363 (R;US)
Wyodak coal: composition, reactions, and products. Final report, 11:31335 (R;US)
Pyrolysis
Wyodak coal: composition, reactions, and products. Final report, 11:31335 (R;US)
Structural Chemical Analysis
Wyodak coal: composition, reactions, and products. Final report, 11:31335 (R;US)
SUBCOOLED BOILING
Data Base Management
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part I. A review of fundamentals of CHF and related data base, 11:33450 (J;US)
Reviews
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part I. A review of fundamentals of CHF and related data base, 11:33450 (J;US)
Subcooled flow boiling critical heat flux (CHF) and its application to fusion energy components. Part II. A review of microconvective, experimental, and correlational aspects, 11:33451 (J;US)
SUBSTRATES
Electric Discharges
Investigation of the plasma properties of surface discharges. Final report, 1 October 1984-30 September 1985, 11:32968 (R;US)
SUBURBS
See URBAN AREAS
SUDAN
Energy Policy
Sudan - energy situation 1984, 11:32009 (R;DE;In German)
Energy Supplies
Sudan - energy situation 1984, 11:32009 (R;DE;In German)
SULFATES
See also CALCIUM SULFATES
MAGNESIUM SULFATES
NICKEL SULFATES
RADIUM SULFATES
SODIUM SULFATES
Atmospheric Chemistry
Sulphates in the atmosphere, 11:32712 (R;GB)
Ecological Concentration
Sulphates in the atmosphere, 11:32712 (R;GB)
SULFIDES
See also GERMANIUM SULFIDES
HYDROGEN SULFIDES
MOLYBDENUM SULFIDES
Corrosive Effects
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
SULFUR
Air Pollution Monitoring
Field-inspection notebook for monitoring total reduced sulfur (TRS) from kraft pulp mills, 11:32717 (R;US)
Catalytic Effects
Impurity modification of surface catalyzed reactions: Methanation over phosphided nickel, 11:31655 (B;US)
Removal
Short-residence-time coal liquefaction, 11:31331 (J;US)

Separation Processes
Surface and electrochemical studies in coal cleaning. Technical progress report, January 1, 1985-March 31, 1986, 11:31344 (R;US)
SULFUR 32
High Spin States
Search for high spin states in ^{32}S, 11:33121 (RA;US)
SULFUR DIOXIDE
Absorption
Evaluation of sorbents and additives for dry SO_2 (sulfur dioxide) removal. Report for September 1984-December 1985, 11:32726 (R;US)
Air Pollution Monitoring
Developing an industrial boiler inventory, 11:32113 (J;US)
Atmospheric Chemistry
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Chemical Reaction Kinetics
Gas-aqueous reactions of sulfur and nitrogen oxides in liquid-water clouds, 11:32738 (BA;US)
Control
Analysis of costs and cost effectiveness of SO_2 control for mixed-fuel-fired steam generating units. Final report, 11:31782 (R;US)
Unified projection of the performance and economics of radiation-initiated NO/sub x//SO/sub x/ emission control technologies. Final report, 11:32730 (R;US)
Environmental Transport
Modeled trends and climatological variability of the net transboundary mass flux of airborne sulfur between the United States and Canada, 11:32710 (R;US)
Removal
CaO interactions in the staged combustion of coal, 11:31372 (B;US)
Studies on the reaction of calcined limestone with sulfur dioxide. Technical progress report, January-March 1986, 11:31314 (R;US)
Update of dry-sodium injection in fabric filters, 11:31781 (RA;US)
SULFUR FLUORIDES
Environmental Transport
Report on the meeting held on January 8 and 9, 1986 at Cesta on the discharge of UF_6, 11:32734 (TG;US)
SULFUR HYDRIDES
See HYDROGEN SULFIDES
SULFUR IONS
Electron-Ion Collisions
Distorted-wave calculations of dielectronic recombination as a function of electric field strength, 11:32957 (J;US)
Ion-Atom Collisions
Correlated charge changing ion-atom collisions. Progress report, March 15, 1985-March 14, 1986, 11:32933 (R;US)
SULFUR OXIDES
See also SULFUR DIOXIDE
Control
EPA's LIMB (Environmental Protection Agency's Limestone Injection Multistage Burner) research, development, and demonstration program. Report for September 1984-January 1986, 11:31734 (R;US)
Excitation
Iterative maps for bistable excitation of two-level systems, 11:33274 (J;US)
Nonlinear Optics
Iterative maps for bistable excitation of two-level systems, 11:33274 (J;US)
Removal
Combustion of calcium treated coals, 11:31373 (B;US)
SULFUR SULFIDES
See SULFUR
SULFURIC ACID
Toxicity
Effects of sulfuric acid mist inhalation on mucous clearance and on airway fluids of rats and guinea pigs, 11:32858 (J;US)
SUM RULES
Anharmonic Oscillators
Summation of asymptotic expansions: the gxsup(2N)-anharmonic oscillator, 11:33253 (RA;SU)
SUN
Oscillation Modes
Solar oscillations, 11:32919 (R;DK)
SUPERALLOYS
See HEAT RESISTING ALLOYS
SUPERCONDUCTING CAVITY RESONATORS
Control Systems
Resonator control system, 11:32571 (RA;US)
Design
Design and construction of superconductor resonators, 11:32527 (RA;US)
Fabrication
Design and construction of superconductor resonators, 11:32527 (RA;US)
Performance
Tests of the low beta resonator, 11:32529 (RA;US)
Plating
Plating laboratory, 11:32573 (RA;US)
Test Facilities
Resonator test facility, 11:32570 (RA;US)
Testing
Tests of the low beta resonator, 11:32529 (RA;US)
SUPERCONDUCTING COMPOSITES
Critical Current
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Current Density
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electric Conductivity
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
SUPERCONDUCTING DEVICES
Restricted to general or review articles and bibliographies.
See also SUPERCONDUCTING CAVITY RESONATORS
SUPERCONDUCTING MAGNETS
Development of a sensitive superconducting accelerometer and gravity gradiometer. Final report, 1 October 1979-30 September 1984, 11:32410 (R;US)
SUPERCONDUCTING JUNCTIONS
Critical Field
Theory of critical currents and perpendicular upper critical fields for superconducting proximity systems, 11:32436 (D;US)
Feasibility Studies
Study and realization of niobium - amorphous silicon - niobium tunnel junctions, 11:32419 (R;FR;In French)
Tunnel Effect
Study and realization of niobium - amorphous silicon - niobium tunnel junctions, 11:32419 (R;FR;In French)
SUPERCONDUCTING MAGNETIC ENERGY STORAGE
Cryogenics
Storage of electric energy in superconducting magnets, 11:31961 (R;FI)
SUPERCONDUCTING MAGNETS
Cryogenic materials for high field superconducting magnets, 11:32222 (J;JP)
Design
Superconducting magnets, 11:32578 (RA;US)
Fabrication
Potential applications of NbN composites in fusion reactor magnets, 11:32416 (R;US)
Physical Radiation Effects
Simulation of fusion reactor conditions for superconducting magnet materials, 11:32417 (R;US)
SUPERCONDUCTING SUPER COLLIDER
Beam Dynamics
SSC accelerator physics, 11:32551 (RA;US)
Design
Reference designs study, 11:32534 (RA;US)
Meetings
anti pp options for the supercollider: proceedings, 11:32589 (R;US)
Specifications
SSC accelerator physics, 11:32551 (RA;US)

Superconducting Magnets
Superconducting magnets, 11:32578 (RA;US)
SUPERCONDUCTING WIRES
Cryogenic materials for high field superconducting magnets, 11:32222 (J;JP)
Critical Current
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Current Density
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electric Conductivity
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
SUPERCONDUCTIVITY
Josephson oscillations of charge density waves, 11:33245 (R;US)
Green Function
On the derivation of quasi-classical equations for superconductors or ^{3}He, 11:33246 (R;DK)
Proximity Effect
Theory of critical currents and perpendicular upper critical fields for superconducting proximity systems, 11:32436 (D;US)
SUPERCONDUCTORS
Chemical Polishing
Lead plating of the low beta resonator, 11:32528 (RA;US)
Thin Films
Thin superconducting-film characterization by surface acoustic waves. Research progress report, 30 September 1984-30 September 1985, 11:32154 (R;US)
SUPERCRITICAL FLOW
See TURBULENT FLOW
SUPERCRITICAL FLUID CHROMATOGRAPHY
Equipment
Identification of polycyclic aromatic compounds containing two heteroatoms in coal liquids and shale oils. Incremental funding request and annual progress report, March 1-November 31, 1983, 11:31332 (R;US)
SUPERFLUIDITY
Green Function
On the derivation of quasi-classical equations for superconductors or ^{3}He, 11:33246 (R;DK)
SUPERGRAVITY
Coupling
Superspace formulation of ten-dimensional N = 1 supergravity coupled to N = 1 super Yang-Mills theory, 11:33076 (J;US)
Many-Dimensional Calculations
Superspace formulation of ten-dimensional N = 1 supergravity coupled to N = 1 super Yang-Mills theory, 11:33076 (J;US)

Fabrication
Target preparation, 11:32568 (RA;US)

TATB
Chemical Reactions
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)
Detonations
Detonation reaction zone studies on TATB explosives, 11:32682 (RA;US)
Relationship between the shock sensitivity and the solid pore sizes of TATB powders pressed to various densities, 11:32673 (RA;US)
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)

TBP
Radiolysis
Contribution to the modelization of liquid-liquid extraction systems. Application to metallic nitrate extraction by TBP in nitric medium, 11:31479 (R;FR;In French)
Solubility
Liquid discharge to sea/rivers/lakes. The solubility of TBP/OK in aqueous media, 11:31478 (R;GB)

TEARING INSTABILITY
Institute for fusion studies. Progress report, September 1, 1984-August 31, 1985, 11:33293 (R;US)

TECHNETIUM
Adsorption Isotherms
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Geochemistry
Technetium and neptunium reactions in basalt/groundwater systems, 11:32900 (BA;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)

TECHNETIUM 99
Ion Exchange
Technetium removal processes for soluble defense high-level waste, 11:31564 (BA;US)
Leaching
investigation of the hydrothermal interaction of ^{99}Tc-doped glass with basalt repository nuclear waste package components, 11:32891 (BA;US)
Precipitation
Technetium removal processes for soluble defense high-level waste, 11:31564 (BA;US)
Removal
Technetium removal processes for soluble defense high-level waste, 11:31564 (BA;US)
Tissue Distribution
Kinetics of sup(99m)Tc labelled RES colloids in man, 11:32846 (R;DE;In German)

TECHNOLOGY TRANSFER
Government Policies
Extending the gasification program research and development/industrial dollar through joint government/industry funding, 11:31328 (J;US)

TECHNOLOGY UTILIZATION
Environmental Effects
Cumulative impacts: real or imagined, 11:31980 (R;US)

TELLURIUM
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
X-Ray Spectra
Excitation cross section of characteristic X-ray radiation by protons and ^{4}He ions for elements with Z within 22 <= Z <= 83 range, 11:33220 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)

TELLURIUM 120
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)

TELLURIUM 122
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)

TELLURIUM 124
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)

TELLURIUM 126
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)

TELLURIUM 128
Gyromagnetic Ratio
Simultaneous measurement of nuclear magnetic moments by the transient field method, 11:33141 (RA;US)

TIN
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
Flotation
Recovery of a concentrate of tin and tungsten from ore mined at Van Roois Vley, 11:32335 (R;ZA)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Recovery
Recovery of a concentrate of tin and tungsten from ore mined at Van Roois Vley, 11:32335 (R;ZA)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
TIN ISOTOPES
Strength Functions
On spin-orbital splitting of neutron 3p-strength functions in Sn isotopes, 11:33185 (RA;SU;In Russian)
TIRES
Air Flow
Air flow inside a pneumatic tire. Final report, 11:32465 (R;US)
TITANATES
Specific compounds, except those of significance to energy research and development, should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Physical Radiation Effects
Self-radiation damage in actinide host phases of nuclear waste forms ($Ca_3Nd_8(SiO_4)_6O_2$; $Gd_2Ti_2O_7$; $CaZrTi_2O_7$), 11:32243 (BA;US)
TITANIUM
Cathodic Protection
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Corrosion
Effects of sulfide, sand, temperature, and cathodic protection on corrosion of condensers, 11:32179 (R;US)
Photon Collisions
Measurements of laser generated impulse, 11:32943 (R;US)
Physical Radiation Effects
Calculated radiation damage effects of high energy proton beams, 11:32175 (R;CH)
Pulses
Measurements of laser generated impulse, 11:32943 (R;US)
TITANIUM 46
Energy-Level Transitions
Study of excited-state GDR's in 1f-2p shell nuclei, 11:33127 (RA;US)
TITANIUM 46 TARGET
Alpha Reactions
Study of excited-state GDR's in 1f-2p shell nuclei, 11:33127 (RA;US)
Carbon 12 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymetric entrance channels, 11:33119 (R;FR;In French)
TITANIUM 48 TARGET
Carbon 12 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymetric entrance channels, 11:33119 (R;FR;In French)
TITANIUM 50 TARGET
Carbon 12 Reactions
Excitation functions of ^{58}Ni, ^{60}Ni, ^{62}Ni compound nuclei formed via symmetric and asymetric entrance channels, 11:33119 (R;FR;In French)

Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electric Conductivity
Analytical technique for deriving the distribution of critical currents in a superconducting wire, 11:32204 (J;US)
Electron Beam Melting
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Heat Treatments
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy, 11:32164 (R;US)
Mechanical Properties
Effect of heat treatment and impurity concentration on some mechanical properties V-15Cr-5Ti alloy, 11:32164 (R;US)
Microstructure
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy, 11:32162 (R;US)
Phase Studies
Investigation of the ternary system Nb-Ti-Al, 11:32185 (RA;BR)
Swelling
Effect of helium on swelling and microstructural evolution in ion-irradiated V-15Cr-5Ti alloy, 11:32162 (R;US)
Tensile Properties
Tensile behavior of helium-implanted and neutron-irradiated V-15Cr-5Ti, 11:32169 (R;US)
TITANIUM BASE ALLOYS
Corrosion Resistance
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)
Deformation
Coupled thermomechanical-diffusion of mobile constituents in a deformable solid, 11:32196 (R;US)
Fatigue
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)
Yield Strength
Titanium L-1 steam turbine blade retrofit. Final report (Ti-6Al-4V), 11:32177 (R;US)
TITANIUM CARBIDES
Microstructure
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)

Physical Radiation Effects
Study on the thermonuclear energy ion interaction with a surface of carbon containing structural materials for thermonuclear reactors, 11:33403 (R;SU;In Russian)

TITANIUM IONS
Electron-Ion Collisions
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
Population Inversion
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
X-Ray Spectra
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)

TITANIUM NITRIDES
Microstructure
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)

TMPN
See HYDROXY COMPOUNDS

TMR REACTORS
Control Systems
Plasma radius control system for tandem mirrors, 11:33385 (J;US)
Plasma Confinement
Plasma radius control system for tandem mirrors, 11:33385 (J;US)
Tritium Recovery
Tritium control in helium-cooled blankets, 11:33429 (J;US)

TMX DEVICES
ECR Heating
Final report for TMX-U systems support, 11:33411 (R;US)
ICR Heating
Final report for TMX-U systems support, 11:33411 (R;US)
Plasma Heating
ICRF heating of passing ions in a thermal barrier tandem mirror, 11:33363 (J;US)

TNT
Chemical Reactions
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)
Detonations
Deuterium kinetic isotope effect: an experimental probe for the molecular processes governing the initiation of RDX, HMX, and TNT, 11:32676 (RA;US)
Sub-ignition reactions at molecular levels in explosives subjected to impact and underwater shock, 11:32675 (RA;US)
Pyrolysis
Deuterium kinetic isotope effect: an experimental probe for the molecular processes governing the initiation of RDX, HMX, and TNT, 11:32676 (RA;US)

TOBACCO SMOKES
Toxicity
Acute effects of cigarette smoke exposure on experimental skin flaps, 11:32861 (J;US)

Computerized Simulation
Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas, 11:33388 (BA;US)
Current-Drive Heating
RF ramp-up efficiency versus power, 11:33375 (J;US)
Electric Currents
Basic principle of constant qsub(a) current buildup in tokamaks, 11:33346 (J;AT)
High-Frequency Heating
Antenna analysis and boundary conditions for Alfven wave studies in tokamaks, 11:33344 (J;AT)
ICR Heating
Fast magnetosonic wave propagation and absorption in Tokamaks, 11:33366 (J;US)
Lifetime
Comparison of pulsed and steady-state tokamak reactor burn cycles. Pt. 1. Thermal effects and lifetime limitations, 11:33446 (J;NL)
Magnetoacoustic Waves
Fast magnetosonic wave propagation and absorption in Tokamaks, 11:33366 (J;US)
Magnetohydrodynamics
Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas, 11:33388 (BA;US)
Mathematical Models
Two-chamber model for divertors with plasma recycling, 11:33382 (J;US)
Pellet Injection
Assessment of pellet injection for NET. Pt. 5. Ignition and fuelling scenario calculations, 11:33404 (R;DE)
Plasma Confinement
Current profile shaping and elimination of sawteeth oscillations by lower hybrid current drive in the PLT tokamak, 11:33368 (J;US)
Particle confinement and the anomalous Doppler instability during combined inductive and lower-hybrid current drive, 11:33325 (J;US)
Plasma Density
Assessment of pellet injection for NET. Pt. 5. Ignition and fuelling scenario calculations, 11:33404 (R;DE)
Plasma Heating
Current profile shaping and elimination of sawteeth oscillations by lower hybrid current drive in the PLT tokamak, 11:33368 (J;US)
Heating of electrons in a high density Tokamak by a microwave near second harmonic frequency, 11:33378 (J;US)
Parabolic approximation method for fast magnetosonic wave propagation in tokamaks, 11:33334 (J;US)
Particle confinement and the anomalous Doppler instability during combined inductive and lower-hybrid current drive, 11:33325 (J;US)
Resonance localization in tokamaks excited with ICRF waves, 11:33362 (J;US)
Runaway electrons and plasma turbulence in current ramping by lower hybrid waves in tokamak plasmas, 11:33372 (J;US)
Plasma Instability
Semi-implicit method for 3D compressible resistive MHD simulation of fusion plasmas, 11:33388 (BA;US)
Plasma Scrape-Off Layer
Study on the tokamak scrape-off layer region (T-10 and TM-4 tokamaks), 11:33303 (R;SU;In Russian)
Plasma Simulation
Assessment of pellet injection for NET. Pt. 5. Ignition and fuelling scenario calculations, 11:33404 (R;DE)
Thermal Fatigue
Comparison of pulsed and steady-state tokamak reactor burn cycles. Pt. 1. Thermal effects and lifetime limitations, 11:33446 (J;NL)

TRITIUM
Air Pollution Abatement
Operation of the room air tritium removal system at the Tritium Systems Test Assembly, 11:33433 (J;US)
Binding Energy
Faddeev calculations of the 2π-3N force contribution to the ^{3}H binding energy, 11:33103 (J;US)
Biological Pathways
Tritium hazard via the ingestion pathway, 11:32851 (J;US)
Breeding
Cost of processing fuel from a molten salt, fusion/fission, hybrid reactor blanket, 11:33428 (J;US)
Tritium control in helium-cooled blankets, 11:33429 (J;US)
Chemisorption
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
Use of metal hydrides for handling tritium, 11:33425 (J;US)
Containment
Operating experience with the Sandia tritium facility cleanup systems, 11:33417 (J;US)
Operation of the room air tritium removal system at the Tritium Systems Test Assembly, 11:33433 (J;US)
Some tips on tritium technology, 11:33427 (J;US)
Containment Systems
Tertiary containment in a multi-room tritium facility, 11:33418 (J;US)
Control
Experimental design to study tritium oxidation as a means of tritium control, 11:33416 (J;US)
Some tips on tritium technology, 11:33427 (J;US)
Tritium control in helium-cooled blankets, 11:33429 (J;US)
Conversion
Low concentration conversion of tritium gas to tritiated water, 11:33419 (J;US)
Damage
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)
Decay
Tritium-helium effects in metals, 11:33436 (J;US)
Diffusion
A novel technique for measurement of tritium permeation through resistant materials near room temperature: demonstration of method with copper at 50-170°C, 11:33439 (J;US)
Diffusion and solubility of tritium in Path A Prime Candidate Alloy, 11:33441 (J;US)
Interaction of polyethylene and tritium gas as monitored by raman spectroscopy, 11:33438 (J;US)
Modeling and experiments on tritium permeation in fusion reactor blankets, 11:33422 (J;US)
Tritium control in helium-cooled blankets, 11:33429 (J;US)
Tritium-helium effects in metals, 11:33436 (J;US)
Distillation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Electrolysis
Experiments on a ceramic electrolysis cell and a palladium diffuser at the Tritium Systems Test Assembly, 11:33420 (J;US)
Fission Product Release
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
Global Fallout
Global environmental transport models for tritium, 11:32747 (J;US)
Ingestion
Tritium hazard via the ingestion pathway, 11:32851 (J;US)
Isotope Separation
A low temperature distillation system for separating mixtures of protium, deuterium, and tritium isotopes, 11:33431 (J;US)
Isotopic Exchange
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
Experiments on a ceramic electrolysis cell and a palladium diffuser at the Tritium Systems Test Assembly, 11:33420 (J;US)
Materials Handling
Tertiary containment in a multi-room tritium facility, 11:33418 (J;US)
Nuclear Facilities
Tertiary containment in a multi-room tritium facility, 11:33418 (J;US)
Oxidation
Experimental design to study tritium oxidation as a means of tritium control, 11:33416 (J;US)
Low concentration conversion of tritium gas to tritiated water, 11:33419 (J;US)
Radiation Doses
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
Radiation Effects
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)
Radiation Hazards
Tritium hazard via the ingestion pathway, 11:32851 (J;US)
Radiation Monitoring
A new tritium monitor for the Tokamak Fusion Test Reactor, 11:33423 (J;US)
Development of an integrated monitoring system for a new tritium facility at Mound, 11:33424 (J;US)
Radiation Protection
Some tips on tritium technology, 11:33427 (J;US)
Radioactivity
Source term development for tritium at the Sheffield disposal site, 11:31567 (BA;US)
Radioecological Concentration
Global environmental transport models for tritium, 11:32747 (J;US)
Radionuclide Migration
Global environmental transport models for tritium, 11:32747 (J;US)
Source term development for tritium at the Sheffield disposal site, 11:31567 (BA;US)
Tritium production, releases and population doses at nuclear power reactors, 11:32746 (J;US)
Relaxation Time
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)

Removal
Moderator detritiation at the Savannah River Plant, 11:33414 (J;US)
Operation of the room air tritium removal system at the Tritium Systems Test Assembly, 11:33433 (J;US)
Release characteristics of tritium from high-purity lithium oxide, 11:33421 (J;US)
Tertiary containment in a multi-room tritium facility, 11:33418 (J;US)
Research Programs
Unresolved tritium issues in the Magnetic Fusion Energy Program, 11:33415 (J;US)
Solubility
Diffusion and solubility of tritium in Path A Prime Candidate Alloy, 11:33441 (J;US)
Tritium Meters
Development of an integrated monitoring system for a new tritium facility at Mound, 11:33424 (J;US)
Ultraviolet Spectra
Ultraviolet radiation-damage absorption line in solid deuterium-tritium, 11:33434 (J;US)

TRITIUM COMPOUNDS
See also TRITIUM OXIDES
Chemisorption
Long-term behavior of the tritides formed by nickel-based intermetallic compounds, 11:33426 (J;US)
Isotope Effects
Isotope effects and helium retention behavior in vanadium tritide, 11:33440 (J;US)
Production
Low concentration conversion of tritium gas to tritiated water, 11:33419 (J;US)

TRITIUM EXTRACTION PLANT
Decontamination
Operating experience with the Sandia tritium facility cleanup systems, 11:33417 (J;US)
Feasibility Studies
Moderator detritiation at the Savannah River Plant, 11:33414 (J;US)
Radiation Protection
Operating experience with the Sandia tritium facility cleanup systems, 11:33417 (J;US)

TRITIUM METERS
Design
A new tritium monitor for the Tokamak Fusion Test Reactor, 11:33423 (J;US)
Performance
A new tritium monitor for the Tokamak Fusion Test Reactor, 11:33423 (J;US)

TRITIUM OXIDES
Chemical Reaction Yield
Experimental design to study tritium oxidation as a means of tritium control, 11:33416 (J;US)
Isotopic Exchange
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
Production
Low concentration conversion of tritium gas to tritiated water, 11:33419 (J;US)

TRITIUM SYSTEMS TEST ASSEMBLY
Air Cleaning Systems
Operation of the room air tritium removal system at the Tritium Systems Test Assembly, 11:33433 (J;US)
Air Pollution Abatement
Operation of the room air tritium removal system at the Tritium Systems Test Assembly, 11:33433 (J;US)
Gaseous Wastes
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
Isotope Separation Plants
Cryogenic hydrogen isotope distillation for the fusion fuel cycle, 11:33430 (J;US)
Radioactive Waste Facilities
Early operating experience with the Tritium Systems Test Assembly tritium waste treatment system, 11:33432 (J;US)
Tritium Recovery
Cryogenic hydrogen isotope distillation for the fusion fuel cycle, 11:33430 (J;US)
Experiments on a ceramic electrolysis cell and a palladium diffuser at the Tritium Systems Test Assembly, 11:33420 (J;US)

TRITIUM TARGET
Pion Reactions
Measurement of observables in the pion-nucleon system and investigation of charge symmetry in ^{3}He and ^{3}H. Progress report, March 1, 1985-February 28, 1986, 11:32982 (R;US)

TRU WASTES

TUFF
Chemical Reactions
Dissolution kinetics of tuff rock and mechanism of chemical bond formation at the interface with cement grout, 11:32898 (BA;US)
Corrosive Effects
Test methods to predict long-term corrosion of container materials in repositories, 11:32226 (BA;US)
Dissolution
Dissolution kinetics of tuff rock and mechanism of chemical bond formation at the interface with cement grout, 11:32898 (BA;US)
Elasticity
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)
Geology
Geology of waste management, 11:32869 (RA;US)
Hydraulic Conductivity
Effect of percolation rate on water-travel time in deep, partially saturated zones, 11:32870 (R;US)
Hydrothermal Alteration
Hydrothermal interaction of Topopah Spring tuff with J-13 water as a function of temperature, 11:32893 (BA;US)
Tuff-cement or concrete interactions in the repository environment, 11:32897 (BA;US)
Mechanical Properties
Geoengineering characterization of welded tuffs from laboratory and field investigations, 11:32894 (BA;US)
Permeability
Geoengineering characterization of welded tuffs from laboratory and field investigations, 11:32894 (BA;US)
Physical Properties
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)
Radioactive Waste Disposal
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)
Rock Mechanics
Analysis of the elastic and strength properties of Yucca Mountain tuff, Nevada, 11:32889 (BA;US)
Geoengineering characterization of welded tuffs from laboratory and field investigations, 11:32894 (BA;US)
Rock-Fluid Interactions
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Hydrothermal interaction of Topopah Spring tuff with J-13 water as a function of temperature, 11:32893 (BA;US)

Thermodynamic Properties
Analysis of the elastic and strength properties of ucca Mountain tuff, Nevada, 11:32889 (BA;US)
TUMORS
See NEOPLASMS
TUNGSTEN
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)
Crystallization
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Flotation
Recovery of a concentrate of tin and tungsten from ore mined at Van Roois Vley, 11:32335 (R;ZA)
Ion Microscopy
Field ion microscopy study of depleted zones in tungsten after proton irradiation, 11:32197 (R;US)
Ion-Atom Collisions
^{4}He induced L-shell X ray production cross sections and their ratios, 11:32942 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
Physical Radiation Effects
Field ion microscopy study of depleted zones in tungsten after proton irradiation, 11:32197 (R;US)
Nucleation model for vacancy complexes in damage cascade area, 11:32181 (R;SU;In Russian)
Recovery
Recovery of a concentrate of tin and tungsten from ore mined at Van Roois Vley, 11:32335 (R;ZA)
Roughness
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
Stability
Stability of multilayers for synchrotron optics, 11:32203 (J;US)
X-Ray Spectra
Excitation cross section of characteristic X-ray radiation by protons and ^{4}He ions for elements with Z within 22 <= Z <= 83 range, 11:33220 (R;SU;In Russian)
Yield cross section of proton induced L-shell characteristic X rays, 11:32941 (R;SU;In Russian)
TUNGSTEN 182 TARGET
Fluorine 19 Reactions
Excited states in neutron-deficient ^{196}Bi, 11:33151 (J;US)
TUNGSTEN 184 TARGET
Antiproton Reactions
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)
Neutron Reactions
Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method, 11:33150 (R;SU,In Russian)
Pion Minus Reactions
Large aperture spectrometer at Fermilab to study high mass dimuons, 11:32638 (J;NL)
TUNGSTEN ALLOYS
See also TUNGSTEN BASE ALLOYS
Ductile-Brittle Transitions
Saturation of the DBTT shift of irradiated 12Cr-1MoVW with increasing fluence, 11:32160 (R;US)
TUNGSTEN BASE ALLOYS
Crystallization
Stability of amorphous metal films on semiconductor substrates. Progress report, January-December 1985 (W-Si; Ni-Nb), 11:32173 (R;US)
TUNGSTEN CARBIDES
Erosion
Slurry erosion of WC-Co alloys and selected ceramics, 11:32236 (R;US)
TUNGSTEN COMPOUNDS

Activation Analysis
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Adsorption Isotherms
Sorption-capacity limited retardation of radionuclides transport in water-saturated packing materials, 11:31592 (BA;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Distribution
Actinide microdistributions within monazite, 11:32903 (BA;US)
Evaporation
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
Gamma Spectroscopy
Mapping Brazilian radioactive minerals by gamma-ray spectrometry and using a germanium detector, 11:31471 (R;BR;In Portuguese)
Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Migration and fixation of Uranium in the surficial environment. Case histories and applications to geochemical exploration, 11:32759 (R;FR;In French)
Leaching
Behavior of actinide containing glassed during gamma irradiation in a saturated tuff environment, 11:32299 (BA;US)
Magnetic Filters
Selection of a matrix for the recovery of uranium by wet high-intensity magnetic separation (WHIMS), 11:31473 (R;ZA)
Manufacturing
Uranium manufacturing process employing the electrolytic reduction method, 11:32217 (TG;US)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Neon 20 Reactions
Kinetic energy flow analysis of high-energy heavy-ion collisions. Classical equations-of-motion approach, 11:33133 (R;SU)
Nuclear Materials Management
Application of titrimetric method in the determination of uranium, 11:31611 (R;BR;In Portuguese)
Nuclear Reaction Analysis
Neutron induced particle track mapping of elemental distributions, 11:32340 (R;US)
Precipitation
Improved uranium recovery from the process strams in an electroplating facility, 11:31565 (BA;US)
Recovery
Improved uranium recovery from the process strams in an electroplating facility, 11:31565 (BA;US)
Selection of a matrix for the recovery of uranium by wet high-intensity magnetic separation (WHIMS), 11:31473 (R;ZA)
Separation Processes
Selection of a matrix for the recovery of uranium by wet high-intensity magnetic separation (WHIMS), 11:31473 (R;ZA)

Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Titration
Application of titrimetric method in the determination of uranium, 11:31611 (R;BR;In Portuguese)
URANIUM 233
Breeding
Cost of processing fuel from a molten salt, fusion/fission, hybrid reactor blanket, 11:33428 (J;US)
URANIUM 235 TARGET
Alpha Reactions
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Carbon 12 Reactions
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Neutron Reactions
Investigation of emission neutron spectra from thorium 232 and uranium 235 for the 6 MeV neutrons, 11:33165 (R;SU;In Russian)
Study on the aligned uranium-235 nuclear decay in the neutron energy range of 1.7 eV - 2.15 keV, 11:33166 (R;SU;In Russian)
URANIUM 238 REACTIONS
Heavy Ion Fusion Reactions
La target fragmentation induced by high energy La and U ions, 11:33143 (RA;US)
URANIUM 238 TARGET
Alpha Reactions
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Carbon 12 Reactions
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
Neutron production by action of high-energy nucleus beam, 11:33168 (R;SU;In Russian)
Uranium target fragmentation by intermediate and high energy ^{13}C and ^{20}Ne, 11:33163 (RA;US)
Iron 56 Reactions
How is the excitation energy divided in partially damped collisions?, 11:33162 (RA;US)
Lead 208 Reactions
Study of spin-spin correlations in deep inelastic collisions, 11:33161 (RA;US)
Neon 20 Reactions
Uranium target fragmentation by intermediate and high energy ^{13}C and ^{20}Ne, 11:33163 (RA;US)
Neon 22 Reactions
Fragment angular distribution and fission reaction duration, 11:33169 (R;SU;In Russian)
Neutron Reactions
Calculation of cross sections and polarizations of neutron scattering on deformed even-even nuclei by the coupled channel method, 11:33150 (R;SU;In Russian)
URANIUM ALLOYS
Elasticity
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)
Phonons
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)
Specific Heat
Measurement of acoustic phonons in UBe_{13}, 11:32210 (J;US)
URANIUM COMPOUNDS
See also URANIUM FLUORIDES
URANIUM HYDRIDES
URANIUM HYDROXIDES
URANIUM NITRATES
URANYL COMPOUNDS
Multi-Element Analysis
Flame photometric determination of Na, K and Li in uranium compounds, 11:32333 (R;BR;In Portuguese)
URANIUM DEPOSITS
Exploration
R-mode factor analysis applied to uranium exploration in the Montrose quadrangle, Colorado, 11:31472 (J;NL)
URANIUM DIOXIDE
Chemical Reactions
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
Conversion Ratio
Fast fission ratio and relative conversion ratio measurements in gadolinium poisoned water moderated UO_2 lattices, 11:31865 (R;GB)
Fast Fission Factor
Fast fission ratio and relative conversion ratio measurements in gadolinium poisoned water moderated UO_2 lattices, 11:31865 (R;GB)
Grain Size
Study of the solid solution formation in mixed oxides by X-ray diffraction, 11:31477 (RA;BR;In Portuguese)
Oxidation
Oxidation of spent fuel at between 250 and 360°C, 11:31796 (R;US)
Standards
Characterization of LWR spent fuel approved testing materials for radionuclide release studies, 11:31837 (BA;US)
X-Ray Diffraction
Study of the solid solution formation in mixed oxides by X-ray diffraction, 11:31477 (RA;BR;In Portuguese)
URANIUM FLUORIDES
See also URANIUM HEXAFLUORIDE
Chemical Reactions
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
URANIUM HEXAFLUORIDE
Chemical Preparation
Formation of actinide hexafluorides at ambient temperatures with krypton difluoride, 11:32395 (J;US)
Environmental Transport
Report on the meeting held on January 8 and 9, 1986 at Cesta on the discharge of UF_6, 11:32734 (TG;US)
URANIUM HYDRIDES
Chemical Preparation
Method for preparation of uranium hydride, 11:32394 (R;BR;In Portuguese)
URANIUM HYDROXIDES
Solubility
Solubility data for U(VI) hydroxide and Np(IV) hydrous oxide: application of MCC-3 methodology, 11:32357 (BA;US)
URANIUM MILLS
See FEED MATERIALS PLANTS
URANIUM NITRATES
Redox Potential
Testing and economical evaluation of U(IV) in Purex, 11:31481 (BA;US)
URANUS PLANET
Satellites
Existence of undiscovered Uranian satellites, 11:32917 (R;US)
URANYL COMPOUNDS
See also URANYL NITRATES
Solubility
Solubility data for U(VI) hydroxide and Np(IV) hydrous oxide: application of MCC-3 methodology, 11:32357 (BA;US)
URANYL NITRATES
Solvent Properties
Contribution to the modelization of liquid-liquid extraction systems. Application to metallic nitrate extraction by TBP in nitric medium, 11:31479 (R;FR;In French)
URBAN AREAS
Fuels
Magnitude and spatial distribution of urban flammable materials in the San Jose Area, California, 11:32766 (R;US)
URINALYSIS
See URINE
URINE
Chemical Analysis
Method for routine determination of fluoride in urine by selective ion- electrode, 11:32841 (R;BR;In Portuguese)

UNDERGROUND DISPOSAL
Remedial Action
Hazardous waste. Status of private party efforts to clean up hazardous waste sites, 11:31982 (R;US)
Risk Assessment
Assessment of risk methodologies for DOE hazardous chemical waste sites. Status report for period ending September 30, 1985, 11:32757 (R;US)
WASTE FORMS
Physical properties of saltstone: a Savannah River Plant waste form, 11:32318 (BA;US)
Crystal Structure
Crystal chemical constraints on the formation of actinide pyrochlores, 11:32311 (BA;US)
Leaching
Current technical issues related to near-field materials testing, 11:32316 (BA;US)
Leaching of saltstone, 11:32319 (BA;US)
Leaching of warm-pressed CaZP-cement composite waste forms, 11:32321 (BA;US)
Materials interactions test method to measure radionuclide release from waste forms under repository-relevant conditions, 11:32315 (BA;US)
NNWSI waste form performance test development, 11:31591 (BA;US)
Materials Testing
Current technical issues related to near-field materials testing, 11:32316 (BA;US)
Standardized waste form test methods, 11:31560 (BA;US)
Performance
Leaching of saltstone, 11:32319 (BA;US)
NNWSI waste form performance test development, 11:31591 (BA;US)
Performance Testing
Materials interactions test method to measure radionuclide release from waste forms under repository-relevant conditions, 11:32315 (BA;US)
Standardized waste form test methods, 11:31560 (BA;US)
Pressure Effects
Salt pressures on defense high-level waste packages, 11:31549 (BA;US)
Stability
Leachability of decontamination reagents from cement waste forms, 11:32323 (BA;US)
Stresses
Salt pressures on defense high-level waste packages, 11:31549 (BA;US)
WASTE ISOLATION PILOT PLANT
See WIPP
WASTE OILS
Recycling
Waste hydrocarbons recycling, 11:31412 (J;US)
WASTE SOLUTIONS
See LIQUID WASTES
WASTE TRANSPORTATION
Cost
Preliminary assessment of costs and risks of transporting spent fuel by barge, 11:31482 (R;US)
Transportation impacts of the commercial radioactive waste management program, 11:31489 (R;US)
Environmental Impacts
Transportation impacts of the commercial radioactive waste management program, 11:31489 (R;US)
Risk Assessment
Preliminary assessment of costs and risks of transporting spent fuel by barge, 11:31482 (R;US)
Transportation impacts of the commercial radioactive waste management program, 11:31489 (R;US)
WASTE WATER
Aerobic Digestion
Strategies for the isolation of microorganisms responsible for polyphosphate accumulation (Acinetobacter lwoffii, A. calcoaceticus, Pseudomonas vesicularis), 11:32836 (RA;US)
Anaerobic Digestion
Nutrient requirements for anaerobic digestion, 11:31631 (RA;US)
Strategies for the isolation of microorganisms responsible for polyphosphate accumulation (Acinetobacter lwoffii, A. calcoaceticus, Pseudomonas vesicularis), 11:32836 (RA;US)

Biodegradation
Effect of ozonation and UV irradiation on biorefractory organic solutes in oil shale retort water, 11:31470 (B;US)
Irradiation
Effect of ozonation and UV irradiation on biorefractory organic solutes in oil shale retort water, 11:31470 (B;US)
Ozonization
Effect of ozonation and UV irradiation on biorefractory organic solutes in oil shale retort water, 11:31470 (B;US)
Water Treatment
Use of macro and microphytes for water pollution control: a practical demonstration, 11:32777 (R;IT;IT)

WASTEFORMS
See WASTE FORMS

WATER
See also GROUND WATER
HEAVY WATER
SEAWATER
WASTE WATER
Chemical Reactions
Interpretation of equilibrium exchange rates for nonelementary reactions, 11:32355 (J;US)
Raman Spectra
Raman spectroscopic investigation of the effect of H_2O on the molybdenum surface species in MoO_3/Al_2O_3 catalysts, 11:32359 (J;US)
Separation Processes
Phase separation of organics/water mixtures using salts, 11:31661 (J;US)

WATER CONTENT
See MOISTURE

WATER COOLANT
See WATER

WATER COOLED REACTORS
See also BWR TYPE REACTORS
LWBR TYPE REACTORS
ORR REACTOR
PWR TYPE REACTORS
TRIGA TYPE REACTORS
Safety
Review of seismic probabilistic risk assessment and the use of sensitivity analysis, 11:32508 (RA;US)

WATER DISTRIBUTION
See WATER SUPPLY

WATER HEATERS
See also SOLAR WATER HEATERS
Energy Conservation
Using a microcomputer for the evaluation of heat pump water heaters in the food service environment, 11:32053 (RA;US)
Energy Efficiency
High-efficiency commercial water-heater development. Supplemental technical report, August 1984-August 1985, 11:32077 (R;US)
Performance
Using a microcomputer for the evaluation of heat pump water heaters in the food service environment, 11:32053 (RA;US)

WATER MODERATED REACTORS
See also BWR TYPE REACTORS
LWBR TYPE REACTORS
ORR REACTOR
PWR TYPE REACTORS
TRIGA TYPE REACTORS
Research Programs
Nuclear Systems and Materials Department research program plan: 1986, 11:31795 (R;US)

WATER MODERATOR
See WATER

WATER POLLUTION
Survey of copper in Kings Bay and Cumberland Sound. Final report, 15-23 January 1985, 11:32775 (R;US)
Remedial Action
Hazardous waste. Status of Air Force's Installation Restoration Program, 11:32790 (R;US)

WATER POLLUTION CONTROL
Use this term for items that involve the removal or management of pollutants after they are formed by a source.
Protection of public water supplies from ground-water contamination. Seminar publication, 11:32785 (R;US)
Cost Benefit Analysis
Techniques and models to estimate the health benefits of controlling toxic substances emitted from coal-fired power plants. Final report, 11:31376 (R;US)

WATER RESOURCES
Public Policy
Diverting structure's effects on a river flow time series, 11:31664 (J;US)

WATER SOURCE HEAT PUMPS
District Heating
District heating system with heat pump aggregates driven by gas engines or electric motors. Final report, 11:32040 (R;DE;In German)
Economics
District heating system with heat pump aggregates driven by gas engines or electric motors. Final report, 11:32040 (R;DE;In German)

WATER SUPPLY
Used in the sense of a public utility or of an engineered system (e.g., irrigation system) as contrasted to a natural system, for which use WATER RESOURCES.
Constraints
Performance of a capacitive cooling system for dry cooling. Final report, 11:31962 (R;US)
Water Pollution Control
Protection of public water supplies from ground-water contamination. Seminar publication, 11:32785 (R;US)

WATER TREATMENT PLANTS
Feasibility Studies
Scouting treatability studies performed in support of the nonradiological wastewater treatment facility feasibility study, 11:32787 (R;US)

WATER VAPOR
Chemical Reactions
Experimental alteration of basalt glass applied to the alteration of nuclear waste glass, 11:32250 (R;US)

WATERBORNE PARTICLES
See PARTICULATES

WATERFLOODING
Field Tests
Multi-pattern low-tension demonstration flood big muddy field. Technical progress report, January-March 1986, 11:31389 (R;US)

WATERSHEDS
Acidification
Chemical composition of precipitation and watershed samples collected at Deep Creek Lake, Garrett County, Maryland. Final report, 11:32783 (R;US)

WAVE EQUATIONS
See also DIRAC EQUATION
SCHROEDINGER EQUATION
Transformations
Spin-two equations, 11:33247 (R;BR)

WAVEGUIDES
Cylindrical Gaussian eigenmodes of a rectangular waveguide resonator: three-dimensional numerical calculation of gain per mode. Technical report, 1 October 1983-30 September 1984, 11:32446 (R;US)
Fabrication
ICRF technology development on the Princeton RF Test Facility, 11:33442 (J;US)
Ion beam processing of $LiNbO_3$, 11:32280 (J;US)

WAVES (SHOCK)
See SHOCK WAVES

WAVES (STANDING)
See STANDING WAVES

WAZ 16
See NICKEL BASE ALLOYS

WEAK BOSON
See INTERMEDIATE VECTOR BOSONS

WEATHERIZATION
Federal Assistance Programs
Department of Energy's state and local assistance program. Final report, 11:32005 (R;US)

WECS
See WIND TURBINES

WEINBERG LEPTON MODEL
Higgs Model
Monte Carlo study of the standard SU(2) Higgs model, 11:33002 (R;DE)
Magnetic Dipole Moments
Testing the WWγ coupling of the standard model at p anti p-colliders, 11:33000 (R;DE)
Unified-Field Theories
Scheme to unify gravity and electro-weak interactions, 11:33045 (R;BR)
WEINBERG MODEL
See WEINBERG LEPTON MODEL
WEINBERG-SALAM GAUGE MODEL
Configuration Mixing
Weak mixing angles in unified theories, 11:33042 (BA;US)
Electron-Muon Interactions
Weak mixing angles in unified theories, 11:33042 (BA;US)
Higgs Bosons
Higgs mass in Salam-Weinberg theory, 11:33034 (BA;US)
Unified-Field Theories
Weak mixing angles in unified theories, 11:33042 (BA;US)
WELDED JOINTS
Stress Corrosion
Stress corrosion cracking tests on electron beam welded carbon steel specimens in carbonate-bicarbonate solution, 11:32155 (R;GB)
WELDING
Underwater Operations
Welding robots for underwater use, 11:32522 (R;DE;In German)
WELDING MACHINES
Nozzles
Concentric micro-nebulizer for direct sample insertion, 11:32435 (P;US)
Robots
Welding robots for underwater use, 11:32522 (R;DE;In German)
WELDS
See WELDED JOINTS
WENTZEL-KRAMERS-BRILLOUIN APPROXIMATION
See WKB APPROXIMATION
WEST GERMANY
See FEDERAL REPUBLIC OF GERMANY
WEST VIRGINIA
Natural Gas Deposits
Eastern gas shales lineament analysis, 11:31421 (RA;US)
WETLANDS
Research Programs
Wetlands research plan, November 1985. Published report, 11:32791 (R;US)
WET-TYPE COOLING TOWERS
See COOLING TOWERS
WIGGLER MAGNETS
Transport properties of relativistic electron beams through linearly polarized magnetic wigglers. Technical report, 1 October 1982-30 September 1983, 11:32545 (R;US)
WIGHTMAN FIELD THEORY
Broken local commutativity axioms for universal Wightman field, 11:33060 (RA;SU)
WILD ANIMALS
Population Dynamics
Cumulative impacts: real or imagined, 11:31980 (R;US)
WIND
See also TORNADOES
Daily Variations
Determining depths of drainage winds, 11:32705 (BA;US)
Hazards
Progress towards developing consistent design and evaluation guidelines for DOE facilities subjected to natural phenomena hazards, 11:32509 (RA;US)
Risk assessment methodology for extreme wind and missile effects on critical facilities, 11:32507 (RA;US)
Mathematical Models
Natural phenomena hazards project for Department of Energy sites, 11:32479 (RA;US)
Measuring Methods
Determining depths of drainage winds, 11:32705 (BA;US)
Risk Assessment
Natural phenomena hazards project for Department of Energy sites, 11:32479 (RA;US)
Natural phenomena risk assessment at Rocky Flats Plant, 11:32489 (RA;US)
Overview of the probabilistic risk assessment approach, 11:32504 (RA;US)
Risk assessment methodology for extreme wind and missile effects on critical facilities, 11:32507 (RA;US)
Standardization of natural phenomena risk assessment methodology at the Savannah River Plant, 11:32505 (RA;US)
WIND ENERGY CONVERSION SYSTEMS
See WIND TURBINES
WIND GENERATORS
See WIND TURBINES
WIND POWER
Measuring Methods
Simultaneous wind speed measurements - in different altitudes with high time resolution for the specification of large wind energy converters. Final report, 11:31769 (R;DE;In German)
Time-Series Analysis
Simultaneous wind speed measurements - in different altitudes with high time resolution for the specification of large wind energy converters. Final report, 11:31769 (R;DE;In German)
WIND POWER PLANTS
Constraints
Local planning and the electric power industry: lessons from the San Gorgonio Pass, 11:31770 (R;US)
Monitoring
Development of a microprocessor based wind and solar monitoring system, 11:31730 (RA;US)
Performance
Development of a microprocessor based wind and solar monitoring system, 11:31730 (RA;US)
Photovoltaic/wind system performance programs, 11:31726 (RA;US)
Wind Turbines
Wind energy system performance model, 11:31771 (RA;US)
WIND TURBINES
Aerodynamics
Wind turbine aerodynamics research needs assessment, 11:31772 (R;US)
Performance
Wind energy system performance model, 11:31771 (RA;US)
Performance Testing
Pellworm-test facilities for wind energy converters. Final report of the project 'Comparative investigations of the performance of small wind energy conversion systems', 11:31773 (R;DE;In German)
Test Facilities
Pellworm-test facilities for wind energy converters. Final report of the project 'Comparative investigations of the performance of small wind energy conversion systems', 11:31773 (R;DE;In German)
Turbine Blades
A computer analysis of wind turbine blade dynamic loads, 11:31774 (J;US)
WINDOWS
Daylighting
Window performance and building energy use. Some technical options for increasing energy efficiency, 11:32070 (R;US)
Energy Efficiency
Patching the thermal hole of windows, 11:32083 (J;US)
Heat Losses
Window performance and building energy use. Some technical options for increasing energy efficiency, 11:32070 (R;US)
Performance
Toward accurate prediction of comparative fenestration performance, 11:32069 (R;US)
Window performance and building energy use. Some technical options for increasing energy efficiency, 11:32070 (R;US)
Thermal Insulation
Aerogel, a transparent insulator for solar applicatons, 11:32087 (BA;CA)

WINDSCALE REPROCESSING PLANT
See SELLAFIELD REPROCESSING PLANT
WIPP
Site Selection
The WIPP research and development program: providing the technical basis for defense waste disposal, 11:31577 (BA;US)
WIRE SPARK CHAMBERS
Mathematical Models
Electrodynamic spark chamber calculational model, 11:32605 (R;SU;In Russian)
WKB APPROXIMATION
Improved WKB radial wave functions in several bases, 11:33276 (J;US)
WOLFRAM
See TUNGSTEN
WOOD
Gasification
Energy from biological processes. Vol. I, 11:31652 (R;US)
WOOD ALCOHOL
See METHANOL
WOOD BURNING APPLIANCES
Air Pollution Monitoring
Indoor air pollution to emissions from wood burning stoves, 11:32089 (J;US)
WORKERS
See PERSONNEL
WORLD-WIDE FALLOUT
See GLOBAL FALLOUT
WORMS (ROUND)
See NEMATODES
WWER TYPE REACTORS
See also BOHUNICE V-2 REACTOR
Information Systems
Application of information on WWER-440 nuclear power plant operation in monitoring reliability, 11:31825 (RA;CS;In Slovak)
Reactor Accidents
Complex approach to investigation of reactivity change accidents and accidents due to component malfunction with a view to compiling safety documentation, 11:31903 (RA;CS;In Czech)
Reactor Components
Application of information on WWER-440 nuclear power plant operation in monitoring reliability, 11:31825 (RA;CS;In Slovak)
WYOMING
Natural Gas Deposits
Geologic characterization of tight gas reservoirs, Greater Green River Basin, 11:31422 (RA;US)

X

X CODES
Comparative Evaluations
Evaluation of XSDRN code for PWR cross-section generation, 11:31828 (R;BR;In Portuguese)
X RADIATION
Chemical Radiation Effects
Gas phase spectroscopy near the carbon K-edge, 11:32363 (J;US)
Optical Systems
X-ray laboratories, 11:32648 (RA;US)
XENOBIOTICS
Carcinogen Screening
Electron attachment identifies carcinogens, 11:32377 (J;US)
Structure-Activity Relationships
Use of selected toxicology information resources in assessing relationships between chemical structure and biological activity, 11:33492 (J;US)
XENON
Dissociation
Selective quenching during half-collisions of laser excited xenon atoms, 11:32382 (BA;US)
Excitation
Selective quenching during half-collisions of laser excited xenon atoms, 11:32382 (BA;US)
XENON 136 REACTIONS
Spallation
Effect of particle evaporation in the $^{136}Xe + {}^{56}Fe$ reaction and a reinvestigation of the $^{86}Kr + {}^{93}Mo$ system, 11:33130 (RA;US)
XENON CHLORIDES
Raman Effect
Efficient stimulated Raman scattering due to absence of second Stokes growth, 11:32356 (J;US)
Scattering
Efficient stimulated Raman scattering due to absence of second Stokes growth, 11:32356 (J;US)
X-RASERS
See X-RAY LASERS
X-RAY DETECTION
Large area 200 psec gated microchannel plate detector, 11:32650 (R;US)
X-RAY DIFFRACTION
Angular Distribution
Angular dependence of photo-emf on X-ray diffraction in ideal crystals of semiconductors with p-n junction, 11:33215 (R;SU;In Russian)
X-RAY LASERS
Studies on production of metastable core-excited atoms by laser-produced x-rays. Final report, 1 October 1984-30 September 1985, 11:32453 (R;US)
Design
Partially coherent radiation, 11:32452 (RA;US)
Mathematical Models
Model for electron cooling by radiation losses in plasmas: Application to development of soft x-ray lasers, 11:32456 (J;US)
Performance
Partially coherent radiation, 11:32452 (RA;US)
Pumping
Model for electron cooling by radiation losses in plasmas: Application to development of soft x-ray lasers, 11:32456 (J;US)
X-RAY SOURCES
For cosmic sources of x radiation use COSMIC X-RAY SOURCES.
Beam Optics
Permanent-magnet structures, 11:32580 (RA;US)
Design
Simple, compact, high brightness source for x-ray lithography and x-ray radiography, 11:32434 (R;US)
Uses
Simple, compact, high brightness source for x-ray lithography and x-ray radiography, 11:32434 (R;US)
X-RAY SPECTROMETERS
Large area 200 psec gated microchannel plate detector, 11:32650 (R;US)
X-RAY SPECTROSCOPY
X-ray laboratories, 11:32648 (RA;US)
XYLOSE
Fermentation
Production of chemicals and fuels by acid hydrolysis and fermentation of MSW (Municipal solid wastes), 11:31657 (RA;US)

Y

YANG-MILLS THEORY
Duality
Dual invariance and dyons in nonabelian gauge theories, 11:33056 (RA;SU;In Russian)
Dyons
Dual invariance and dyons in nonabelian gauge theories, 11:33056 (RA;SU;In Russian)

Gauge Invariance
Dual invariance and dyons in nonabelian gauge theories, 11:33056 (RA;SU;In Russian)
On the gauge-invariant variables for non-Abelian theories, 11:33063 (RA;SU)
SU-2 Groups
Witten index calculation in supersymmetric gauge theory, 11:33067 (R;SU)
Supersymmetry
Witten index calculation in supersymmetric gauge theory, 11:33067 (R;SU)

YANKEE VERMONT REACTOR
See VERMONT YANKEE REACTOR

YIELDS
Catalytic Effects
Tar removal in a hot gas desulfurization process. Final report, October 1984-March 1985, 11:31299 (R;US)

YTTRIUM 102
Energy Levels
Identification and decay of neutron-rich ^{102}Sr and level structure of A∼100 Y nuclei, 11:33144 (J;US)

YTTRIUM 89 TARGET
Heavy Ion Reactions
Electromagnetic dissociation of ^{59}Co, ^{89}Y, and ^{197}Au targets by relativistic heavy ions to Z = 26, 11:33136 (J;US)

YTTRIUM ALUMINIUM GARNETS
See ALUMINIUM OXIDES

YTTRIUM OXIDES
Size
Comparative instrumental study on the size characteristics of yttrium oxide aggregate aerosols, 11:31930 (RA;US)

YUCCA MOUNTAIN
Ground Motion
Tectonic stability and expected ground motion at Yucca Mountain. Final report. Revision 1. August 7-8, 1984-January 25-26, 1985, 11:32879 (R;US)
Hydrology
Effect of percolation rate on water-travel time in deep, partially saturated zones, 11:32870 (R;US)
Tuff
Geology of waste management, 11:32869 (RA;US)

Z

Z PINCH DEVICES (LINEAR)
See LINEAR Z PINCH DEVICES

ZEA MAYS
See MAIZE

ZENITH REACTOR
Reactor Fueling
Calculations of reactivities and temperature coefficients for the U235 loadings of ZENITH, 11:31879 (R;GB)
Reactor Physics
Calculations of reactivities and temperature coefficients for the U235 loadings of ZENITH, 11:31879 (R;GB)

ZEOLITES
See also CLINOPTILOLITE
Catalytic Effects
Cation promotion effects in zeolite-supported F-T catalysis. Tenth quarterly report, December 1984-February 1985, 11:31648 (R;US)

ZERO ENERGY NITROGEN HEATED THERMAL REACT
See ZENITH REACTOR

ZFK ROSSENDORF
Research Programs
Joint annual report 1984, 11:31996 (R;DD;In German and English)

ZINC
Adsorption
Electrokinetics, adsorption and colloid study of simulated nuclear waste glasses leached in aqueous solutions, 11:32296 (BA;US)
Emission Spectroscopy
Determination of trace impurities in high purity water by emission spectroscopy and flame photometry, 11:32332 (R;BR)
X-Ray Fluorescence Analysis
Determination of lead, zinc, and magnesium in dolomite and its benefication products by use of x-ray-fluorescence spectrometry, 11:32336 (R;ZA)

ZINC 68 TARGET
Argon 40 Reactions
Competing mechanisms in the ^{40}Ar+^{68}Zn reaction between 10 and 30 MeV/nucleon, 11:33135 (R;FR)

ZINC ALLOYS
See also BRASS
MUNTZ METAL
Physical Radiation Effects
Stability of metallic CsCl-structured alloys under ion irradiation, 11:32201 (J;US)

ZINC COMPOUNDS
Electron Transfer
Distance dependent rates of photoinduced charge separation and dark charge recombination in fixed distance porphyrin-quinone molecules, 11:32367 (R;US)

ZINC IONS
Electron-Ion Collisions
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
Population Inversion
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)
X-Ray Spectra
3s—3p laser gain and x-ray line ratios for the carbon isoelectronic sequence, 11:32945 (J;US)

ZIRCALOY
For unspecified Zircaloy alloys.
See also ZIRCALOY 2
ZIRCALOY 4
Fuel Cans
Effects of Zircaloy oxidation and steam dissociation on PWR core heat-up under conditions simulating uncovered fuel rods, 11:31807 (R;US)
Fuel Performance Improvement Program. Final report, 11:31794 (R;US)
Oxidation
Effects of Zircaloy oxidation and steam dissociation on PWR core heat-up under conditions simulating uncovered fuel rods, 11:31807 (R;US)
Reactor Materials
Effects of Zircaloy oxidation and steam dissociation on PWR core heat-up under conditions simulating uncovered fuel rods, 11:31807 (R;US)

ZIRCALOY 2
Corrosion
Corrosion and hydriding of fuel cladding materials, 11:31802 (RA;XA)

ZIRCALOY 4
Corrosion
Corrosion and hydriding of fuel cladding materials, 11:31802 (RA;XA)
Oxidation
Oxidation behavior of Zr and its alloys, 11:32191 (RA;BR;In Portuguese)

ZIRCONATES
Specific compounds should be indexed by coordination of a descriptor of the form (CATION) COMPOUNDS and the above anion descriptor.
Physical Radiation Effects
Self-radiation damage in actinide host phases of nuclear waste forms ($Ca_3Nd_6(SiO_4)_6O_3$; $Gd_2Ti_2O_7$; $CaZrTi_2O_7$), 11:32243 (BA;US)

ZIRCONIUM
Activation Analysis
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Dissolution
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)

Geochemistry
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Mobility
Behavior of nuclear waste elements during hydrothermal alteration of glassy rhyolite in an active geothermal system: Yellowstone National Park, Wyoming, 11:32895 (BA;US)
Oxidation
Oxidation behavior of Zr and its alloys, 11:32191 (RA;BR;In Portuguese)
Redox Reactions
Equilibrium studies and redox kinetics of the peroxo complex of zirconium(IV) in acidic perchlorate solution, 11:32343 (R;US)
Solubility
Solubility limits, on radionuclide dissolution, 11:31590 (BA;US)
Solvent Extraction
Extraction of zirconium and hafnium thiocyanates by methyl isobutyl ketone - thiocyanic acid from chloride medium, 11:32331 (R;BR;In Portuguese)

ZIRCONIUM 96
Nuclear Structure
Evidence for a coexisting four-particle, four-hole band in doubly closed subshell ^{96}Zr, 11:33145 (J;US)

ZIRCONIUM 96 TARGET
Neutron Reactions
Evidence for a coexisting four-particle, four-hole band in doubly closed subshell ^{96}Zr, 11:33145 (J;US)

ZIRCONIUM ALLOYS
See also ZIRCONIUM BASE ALLOYS
Sorptive Properties
Long-term behavior of the tritides formed by nickel-based intermetallic compounds, 11:33426 (J;US)

ZIRCONIUM BASE ALLOYS
See also ZIRCALOY
Oxidation
Oxidation behavior of Zr and its alloys, 11:32191 (RA;BR;In Portuguese)

ZIRCONIUM CARBIDES
Microstructure
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)

ZIRCONIUM CHLORIDES
Distillation
High-pressure distillation of crude $ZrCl_4$. Open File report, 11:32339 (R;US)

ZIRCONIUM COMPLEXES
Equilibrium studies and redox kinetics of the peroxo complex of zirconium(IV) in acidic perchlorate solution, 11:32343 (R;US)
Chemical Preparation
Zirconoxycarbene complexes of ruthenium - reduction of coordinated CO in the reaction of a Zr-Ru compound with H_2, 11:32371 (J;US)

ZIRCONIUM NITRIDES
Microstructure
Characterization of hard mono-nitride and -carbide titanium and zirconium coatings on high speed steel cutting tool inserts, 11:32228 (R;US)

ZIRCONIUM OXIDES
See also ZIRCONOLITE
Friction
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)
Materials Testing
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)
Stress Analysis
Comparison of the Contact stress and friction behavior of SiC and ZrO_2 materials, 11:32241 (BA;US)

ZIRCONIUM PHOSPHATES
Leaching
Leaching of warm-pressed CaZP-cement composite waste forms, 11:32321 (BA;US)

ZIRCONOLITE
Fracture Properties
Irradiation-induced reduction of microcracking in zirconolite, 11:32242 (BA;US)
Hardness
Irradiation-induced reduction of microcracking in zirconolite, 11:32242 (BA;US)
Physical Radiation Effects
Irradiation-induced reduction of microcracking in zirconolite, 11:32242 (BA;US)
Self-Irradiation
Irradiation-induced reduction of microcracking in zirconolite, 11:32242 (BA;US)

ZOOPLANKTON
Species Diversity
Zooplankton data report: the Marginal Ice Zone Experiment MIZEX, 1984, 11:32768 (R;US)

ZT-40 DEVICES
Reverse-Field Pinch
Calculation of RFP equilibrium in ZT-40M by finite-beta model, 11:33384 (J;JP)

CONTRACT NUMBER INDEX

Numbers assigned to DOE contracts under which documents announced in this publication were prepared are included in this index.

Contract No.	*Abstract No.*	*Report No.*
AC01-76CS20419	**Union Carbide Corp., Tonawanda, NY (USA). Linde Div.**	
	11:31647	DOE/CS/20419—T1
AC01-79EI10464	**ICF, Inc., Washington, DC (USA)**	
	11:31406	DOE/EI/10464—T3
AC01-79RA35017	**ICF, Inc., Washington, DC (USA)**	
	11:31764	DOE/RA/35017—T2
AC01-83DP48017	**Mitre Corp., McLean, VA (USA). METREK Div.**	
	11:31497	DOE/DP—0020
AC01-84PE17056	**Factory Mutual Research Corp., Norwood, MA (USA)**	
	11:32510	DOE/PE/17056—T10
AC01-84RW00037	**Johnson (E.R.) Associates, Inc., Reston, VA (USA)**	
	11:31483	DOE/RW/00037—T1
	11:31484	DOE/RW/00037—T1-App.
AC01-85ER30075	**Washington Consulting Group, Inc., DC (USA)**	
	11:31772	DOE/ER/30075—H1
AC02-76CH00016	**Science Applications International Corp., Schaumburg, IL (USA)**	
	11:31605	NUREG/CR—4319
	Brookhaven National Lab., Upton, NY (USA)	
	11:31945	NUREG/CR—3957
	11:31975	BNL—37939
	11:31981	DOE/NBB—0076
	11:32092	BNL—51978
	11:32209	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6326-6330 (1 May 1986).
	11:32210	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6488-6490 (1 May 1986).
	11:32239	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6552-6554 (1 May 1986).
	11:32363	Proceedings of the Society of Photo-Optical Instrumentation Engineers 447 143-149 (1983).
	11:32386	Journal of the American Chemical Society 108 NO. 3. 523-525 (5 Feb 1986).
	11:32642	BNL—37619
	11:32768	BNL—37972
	11:32776	DOE/ER—0262
	11:32817	BNL—37795
	11:32856	DOE/ER—0243
	11:32862	Carcinogenesis (New York) 6 NO. 5. 769-772 (1985).
	11:32863	Experimental Cell Biology 53 121-129 (1985).
	11:32996	BNL—37928
	11:32997	BNL—38034
	11:33033	Physical Review Letters 56 NO. 16. 1651-1654 (21 Apr 1986).
	11:33078	Physical Review [Section] D: Particles and Fields 33 NO. 10. 2930-2943 (15 May 1986).
	11:33080	Physical Review [Section] D: Particles and Fields 33 NO. 10. 3031-3038 (15 May 1986).
	11:33094	BNL-NCS—37888
	11:33152	Physical Review Letters 56 NO. 15. 1547-1550 (14 Apr 1986).
	11:33173	BNL—38026
	11:33199	Physical Review [Section] C: Nuclear Physics 33 NO. 5. 1819-1822 (May 1986).
	11:33241	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6541-6544 (1 May 1986).
	11:33281	Annals of Physics (New York) 167 NO. 1. 62-72 (Mar 1986).
	11:33490	IEEE (Institute of Electrical and Electronics Engineers) Transactions on Nuclear Science N
AC02-76CH03000	**Fermi National Accelerator Lab., Batavia, IL (USA)**	
	11:32590	FNAL-TM—1395
	11:32915	FNAL/Pub—86/51-A
	11:32983	FNAL-TM—1396
AC02-76CH03073	**Plasma Physics Laboratory, Princeton University, Princeton, New Jersey 08544**	
	11:32953	Physical Review [Section] A: General Physics 33 NO. 5. 3595-3597 (May 1986).
	11:33319	Physics of Fluids 29 NO. 6. 1760-1764 (Jun 1986).
	11:33321	Physics of Fluids 29 NO. 6. 1891-1899 (Jun 1986).
	11:33334	Physics of Fluids 29 NO. 5. 1608-1619 (May 1986).
	11:33338	Journal of Computational Physics 63 NO. 2. 247-267 (Apr 1986).
	11:33358	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 28-31 (Jul 1985).
	11:33360	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 65-66 (Jul 1985).
	11:33361	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 67-70 (Jul 1985).
	11:33364	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 83-86 (Jul 1985).
	11:33365	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 91-95 (Jul 1985).
	11:33366	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 99-102 (Jul 1985).
	11:33368	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 131-134 (Jul 1985).

Contract No.	Abstract No.	Report No.
	11:33369	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 135-138 (Jul 1985).
	11:33375	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 178-181 (Jul 1985).
	11:33379	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 222-226 (Jul 1985).
	11:33380	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 235-242 (Jul 1985).
	11:33442	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 61-64 (Jul 1985).
	11:33445	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 170-173 (Jul 1985).
AC02-76ER00881	**Los Alamos National Laboratory, Los Alamos, New Mexico 87545; Department of Physics, University of W**	
	11:33276	Physical Review [Section] A: General Physics 33 NO. 5. 2887-2898 (May 1986).
	11:33277	Physical Review [Section] A: General Physics 33 NO. 5. 2899-2906 (May 1986).
AC02-76ER01198	**Department of Physics and Materials Research Laboratory, University of Illinois at Urbana-Champaign,**	
	11:32266	Physical Review [Section] B: Condensed Matter 33 NO. 10. 6983-6989 (15 May 1986).
	11:32973	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6057-6067 (1 May 1986).
AC02-76ER01715	**Wisconsin Univ., Madison (USA)**	
	11:32378	DOE/ER/01715—249
AC02-76ER02754	**Sandia National Laboratories, Albuquerque, New Mexico 87185**	
	11:32276	Journal of Materials Research 1 NO. 1. 130-138 (Jan 1986).
AC02-76ER02853	**Massachusetts Univ., Amherst (USA)**	
	11:33177	DOE/ER/02853—28
AC02-76ER03074	**A. W. Wright Nuclear Structure Laboratory, Yale University, New Haven, Connecticut 06511**	
	11:33092	Annals of Physics (New York) 167 NO. 1. 181-200 (Mar 1986).
	11:33158	Physical Review [Section] C: Nuclear Physics 33 NO. 5. 1855-1858 (May 1986).
	11:33201	Annals of Physics (New York) 167 NO. 1. 73-98 (Mar 1986).
AC02-76ER03075	**Physics Department, J. W. Gibbs Laboratory, Yale University, New Haven, Connecticut 06520**	
	11:33275	Physical Review [Section] B: Condensed Matter 33 NO. 9. 6515-6518 (1 May 1986).
	11:33282	Journal of Statistical Physics 42 NO. 2. 275-492 (Feb 1986).
AC02-76ER03130	**Laboratoire de Physique Theorique, Universite de Nice, Parc Valrose, 06034 Nice Cedex, France**	
	11:33081	Physical Review [Section] D: Particles and Fields 33 NO. 10. 3039-3054 (15 May 1986).
AC02-76ER13001	**Max-Planck-Institut fuer Kernphysik, D-6900 Heidelberg, Federal Republic of Germany**	
	11:32974	Physical Review [Section] A: General Physics 33 NO. 5. 3535-3536 (May 1986).
	11:33202	AIP (American Institute of Physics) Conference Proceedings 110 NO. 1. 187-206 (20 Feb 1984
AC02-76ER13065	**Department of Physics and Astronomy, University of Rochester, Rochester, New York 14627**	
	11:33077	Physical Review [Section] D: Particles and Fields 33 NO. 10. 2863-2869 (15 May 1986).
AC02-76ET34215	**Consumers Power Co., Jackson, MI (USA)**	
	11:31794	DOE/ET/34215—39
AC02-76ET52040	**Fusion Studies Laboratory, University of Illinois, 103 S. Goodwin Ave., Urbana, Illinois 61801**	
	11:33454	AIP (American Institute of Physics) Conference Proceedings 111 NO. 1. 647-658 (1 Mar 1984)
AC02-76ET53065	**Laboratory of Plasma Studies, Cornell University, Ithaca, New York 14853**	
	11:33323	Physics of Fluids 29 NO. 6. 1923-1938 (Jun 1986).
AC02-76EV03140	**Univ. of Wales Institute of Science and Tech., Cardiff**	
	11:32865	Inorganica Chimica Acta 91 L51-L53 (1984).
AC02-76EV03490	**Univ. of Rochester School of Medicine and Dentistry, NY**	
	11:32806	Journal of Steroid Biochemistry 20 NO. 4B. 1027-1032 (1984).
AC02-77EV04580	**Northeastern Univ., Nahant, MA**	
	11:32800	Science (Washington, D.C.) 231 NO. 4743. 1302-1304 (14 Mar 1986).
AC02-78ER04987	**Northwestern Univ., Evanston, IL**	
	11:32355	A.I.Ch.E. Journal (New York) 30 NO. 5. 725-732 (Sep 1984).
AC02-78ET51013	**Plasma Fusion Center and Research Laboratory of Electronics, Massachusetts Institute of Technology,**	
	11:33325	Physics of Fluids 29 NO. 6. 1985-1993 (Jun 1986).
	11:33331	Physics of Fluids 29 NO. 5. 1741-1743 (May 1986).
	11:33367	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 122-130 (Jul 1985).
	11:33370	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 139-142 (Jul 1985).
	11:33373	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 158-161 (Jul 1985).
	11:33374	AIP (American Institute of Physics) Conference Proceedings 129 NO. 1. 162-165 (Jul 1985).
AC02-79ET34006	**Consumers Power Co., Jackson, MI (USA)**	
	11:31793	DOE/ET/34006—19
AC02-79EV10091	**Michigan Univ., Ann Arbor (USA). Biological Station**	
	11:32814	DOE/EV/10091—2
AC02-79EV10237	**Brigham Young Univ., Provo, UT (USA). Dept. of Chemistry**	
	11:31332	DOE/EV/10237—T3

Contract No.	Abstract No.	Report No.
AC02-79EV10244	**Utah Univ., Salt Lake City (USA). Dept. of Chemistry**	
	11:31333	DOE/EV/10244—T5
AC02-80ER10715	**Purdue Univ., Lafayette, IN (USA). Dept. of Entomology**	
	11:32794	DOE/ER/10715—1
AC02-80ER10719	**Department of Earth and Space Sciences, State University of New York at Stony Brook**	
	11:32923	Astrophysical Journal 300 NO. 1. 142-150 (1 Jan 1986).
AC02-80EV10359	**Franklin McLean Memorial Research Inst., Chicago, IL (USA)**	
	11:32829	DOE/EV/10359—4
	11:32830	DOE/EV/10359—6
AC02-81ER10878	**Univ. of Massachusetts, Amherst**	
	11:31660	Current Microbiology 11 129-136 (1984).
AC02-81ER10945	**Argonne National Lab., IL (USA)**	
	11:32809	ANL/CNSV-TM—167(Dec 1985).
AC02-81ER40033	**Rockefeller Univ., New York (USA)**	
	11:32557	DOE/ER/40033—108
	11:33270	Physical Review [Section] D: Particles and Fields 33 NO. 10. 2922-2929 (15 May 1986).
AC02-81ER60015	**New York Univ., NY**	
	11:32801	Carcinogenesis (New York) 6 NO. 1. 151-154 (1985).
AC02-82CE30750	**Association of Collegiate Schools of Architecture, Washington, DC (USA)**	
	11:32067	DOE/CE/30750—T1
AC02-82ER12032	**Rensselaer Polytechnic Inst., Troy, NY (USA)**	
	11:32932	DOE/ER/12032—05
AC02-82ER60084	**Children's Hospital Medical Center, Boston, MA (USA). Dept. of Radiology**	
	11:32824	DOE/ER/60084—5
AC02-83CH10093	**Solar Energy Research Institute (SERI), Golden, CO**	
	11:31666	Energy Technology (Washington, D.C.) 12 1612-1621 (Aug 1985).
	Solar Energy Research Inst., Golden, CO (USA)	
	11:31676	DOE/CE/10093—H1
	11:31716	SERI/SP—271-2763
	11:31719	IEEE (Institute of Electrical and Electronics Engineers) Transactions on Electron Devices
	11:31734	SERI/TP—252-2903
	11:31755	SERI/TP—250-2928
	11:31756	SERI/TP—250-2934
	11:31757	SERI/TP—252-2943
	11:32083	Energy Technology (Washington, D.C.) 12 718-727 (Aug 1985).
	Clemson Univ., SC (USA). Dept. of Mechanical Engineering	
	11:32472	SERI/TP—252-2847
AC02-83CH10140	**Battelle Columbus Labs., OH (USA)**	
	11:31495	BMI/ONWI—599
AC02-83ER13044	**Laboratory of Atomic and Solid State Physics, Cornell University, Ithaca, New York 14853**	
	11:33280	Physical Review Letters 56 NO. 16. 1619-1622 (21 Apr 1986).
AC02-83ER13106	**Lehigh Univ., Bethlehem, PA (USA)**	
	11:32795	DOE/ER/13106—1
AC02-83ER13116	**Western Michigan Univ., Kalamazoo (USA)**	
	11:32933	DOE/ER/13116—8
AC02-83ER45041	**Department of Physics, Massachusetts Institute of Technology, Cambridge, Massachusetts 02139**	
	11:32278	Journal of Materials Research 1 NO. 1. 177-186 (Jan 1986).
AC02-83ER60110	**Columbia Univ., New York (USA). Nevis Labs.**	
	11:32843	DOE/ER/60110—3
AC02-84ER53166	**The University of Wisconsin, Torsatron/ Stellarator Laboratory, Madison, Wisconsin 53706**	
	11:33316	Physics of Fluids 29 NO. 6. 1979-1984 (Jun 1986).
AC03-76ET12056		
	11:31397	(1985).
AC03-76ET53057	**Science Applications International Corporation, Plasma Research Institute, 1515 Walnut Street, Bould**	
	11:33330	Physics of Fluids 29 NO. 5. 1587-1601 (May 1986).
	Science Applications International Corp., Boulder, CO (USA). Plasma Research Inst.	
	11:33409	SAIC—86/1606
AC03-76SF00098		
	11:31470	(1985).
	Lawrence Berkeley Lab., CA (USA)	
	11:31766	LBL—21112
	11:31767	LBL—21249
	11:31969	(1985).
	Accord, Palo Alto, CA (USA)	
	11:32029	EPRI-P—4401-SR(Jan 1986).
	11:32034	Journal of the Electrochemical Society 132 NO. 10. 2381-2384 (Oct 1985).
	Arizona Univ., Tucson (USA). Coll. of Engineering	
	11:32046	CONF-850241—(May 1985).
	Lawrence Berkeley Lab., CA (USA)

REPORT NUMBER INDEX

The numbers assigned to reports cited in this publication appear in the first column of the index. Cross reference information and/or availability are included as appropriate. Abbreviations used in the availability column are elaborated at the end of the index. To expedite the filling of orders for reports from NTIS and OSTI, a file number in the form, DE82000001 or TI82000001, appears in column 3. File numbers with DE prefixes may be used in ordering from both NTIS and OSTI. Numbers with TI prefixes are valid at OSTI only. Requesters are urged to use this file number where provided. In column 4, one or more DOE distribution categories are indicated, e.g., STD-10, MN-25. STD indicates distribution was made in full-size copy; MN indicates microcopy distribution; ND indicates no distribution was made. These category numbers are included to assist DOE librarians in responding to requests for reports in their collections. The UC (Unclassified Distribution Categories) are defined in DOE/TIC-4500, available from OSTI. The citation numbers are given in column 5. NOTE: DOE attempts to disseminate its information as broadly as possible. Even though a report may contain some degree of illegibility, it is believed that the report may still make a contribution. The presence of a 1, 2, or 3 following NTIS in the availability column denotes the extent to which a report may be illegible and the form in which it is available: 1 = 5 to 8% illegibility, available PC and MF; 2 = 9 to 12% illegibility, available MF only; 3 = 13% or more illegibility, available PC only. For the users of DOE/RECON, report ordering may be accomplished more expeditiously via the on-line system. Employees of DOE or DOE contractors are urged to order from the Office of Scientific and Technical Information (OSTI); all others should order from the National Technical Information Service (NTIS). Procedures for on-line ordering are detailed in the DOE/RECON User's Manual (DOE/TIC-4586).

AVAILABILITY OF REFERENCES ABSTRACTED

REPORTS

A document cited in this publication is considered a "report" when it carries a unique identifying number (e.g., ANL-3130, BNL-4000, DP-150, etc.) as the first element of the citation. Usually, one or more of the following abbreviations will appear at or near the end of the citation, indicating the organization from which the document is available. If none of these abbreviations appears, the report should be requested from either the cited publisher or corporate source.

GPO — Available from the Superintendent of Documents, U. S. Government Printing Office, Washington, DC 20402.

GPO Dep. — Available for inspection or interlibrary loan at GPO depository libraries. Unlimited DOE reports are being sent to the GPO depository libraries. See inside back cover for list of the libraries. These reports are identified by report number, Supt. of Docs. Class Number (E 1.99:) and OSTI accession/file number, e.g., DE84003384.

NTIS — For sale by the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, VA 22161. Paper copy (PC) price codes given are for domestic users; prices for foreign purchasers are in most instances twice the domestic price. There is only one microfiche (MF) price code, MF A01 ($5.95).

OSTI — Available from the Office of Scientific and Technical Information (OSTI), U. S. Department of Energy, P. O. Box 62, Oak Ridge, TN 37831, Attn: Technical Information Division.

NOTE: DOE offices and contractors should order reports from OSTI; all others should order from NTIS. For additional information, see the introductory paragraph to the Report Number Index.

NTIS NORTH AMERICAN PRICE CODES

Most NTIS products and services are now announced by price codes and, therefore, without specific prices in NTIS journals, newsletters, and indexes.

The current dollar equivalent for each code is shown in the schedule below. Orders must list the accession number(s) and be accompanied by the total dollar amount from the current schedule.

NORTH AMERICAN CONTINENT PRICE SCHEDULE

Customers in Canada, United States, and Mexico, please use this price schedule; other addressees, write for Folder PR-360-4.

MICROFICHE	E01..... $7.50	T01..... $145.00
A01..... $5.95	E02..... 10.00	T02..... 160.00
PAPER COPY	E03..... 11.00	T03..... 275.00
A02..... 9.95	E04..... 13.50	T04..... 370.00
A03..... 9.95	E05..... 15.50	T05..... 460.00

U.S. DEPARTMENT OF COMMERCE

National Technical Information Service

5285 Port Royal Road, Springfield, Virginia 22161

NON-REPORT DOCUMENTS

BOOKS

Most books cited are available from commercial publishers. Order from the publisher or other source as given, not from OSTI.

CONFERENCE PAPERS

Individual conference papers (or preprints) not available as reports should be requested from the originator or other source as cited.

CONFERENCE PROCEEDINGS

Many proceedings are available from commercial publishers; in other cases, request from the society, organization, institution, etc., cited as the source.

DISSERTATIONS (THESES)

Available from University Microfilms International, Dissertation Copies, P. O. Box 1764, Ann Arbor, MI 48106. Request by order number cited, e.g., 85-22,350.

JOURNAL ARTICLES

Users must use their own resources to obtain (or scan) articles cited—local, state, or university libraries or publishers, reprint services, etc.

MONOGRAPHS

Request from the organization, institution, society, etc., responsible for the monograph.

PATENTS

Although not cataloged as reports, patents cited from each country are listed in the Report Number Index under PATENTS-AU, PATENTS-FR, PATENTS-US, etc. U. S. Patent Applications (e.g., A 293,415) are available from NTIS.

CODES USED ON INDEX LINES

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;RU). The language designator does not appear if the document is published in English.

FEDERAL DEPOSITORY LIBRARY PROGRAM

As a result of an agreement between the U. S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microfilm form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are *not* sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.

DOE/RECON SYSTEM

COMPUTER SEARCH SERVICE

DOE/RECON is an interactive on-line information retrieval system developed to provide rapid and easy access to energy-related data bases. It is available to DOE and contractor offices and to other federal government and state agencies with energy-related missions. The acronym RECON stands for REmote CONsole, which signifies that the system can be accessed by users located at various sites across the United States.

The system permits users to carry on a dialogue with the computer. This dialogue allows browsing through large data bases and can result in retrieval of citations which answer specific needs. Desired information can be selectively retrieved via simple yet powerful commands sent to the computer from the terminal keyboard.

Search logic may be formulated by the use of indexed terms, such as keywords, authors, categories, or corporate authors. As the search session progresses, AND, OR and NOT Boolean logic may be used to improve precision, i.e., the specificity of the retrieved set. For most data bases, the user may limit the scope of the search to particular years or volumes of data. Upon completion of a search, the user may choose to have the results displayed or printed at his/her terminal or to have the results printed and mailed the following day.

The DOE/RECON system is supported by dual IBM 370/3033 computers. Two IBM 3705 front-end communications computers are used to perform the message switching. Although most of the ~40 data bases are bibliographic in content, DOE/RECON is not limited to this type; the Research in Progress (RIP) data base is one that is non-bibliographic. Presently, over 2 million references are available.

Requests for information concerning authorization to access the DOE/RECON system should be addressed to
